Addendum No. 1
CSO-GC-SFS-OH CP3 - CSO Facilities for Gowanus Canal Construction Package CP3
October 12, 2026

ADDENDUM NO. 1 TO CONTRACT DOCUMENTS

PROJECT:	CSO Facilities for Gowanus Canal, OH CP3	**PROJECT NO.:**	CSO-GC-SFS-OH-CP3
OWNER:	NYCDEP	**DATE:**	October 12, 2026

To All Bidders:

Contractors submitting bids for the above-named project shall take note of the following changes, additions, deletions, clarifications, etc., in the Contract Documents, which shall become a part of and have precedence over anything contrarily shown or described in the Contract Documents, and all such shall be taken into consideration and be included in the Contractor's bid proposal.

(Please see attached pages.)

Plan holders wishing to submit bids should acknowledge receipt of this and all Addenda by listing the Addendum Numbers on the appropriate line of the Bid Booklet – Section B2, Acknowledgment of Addenda.

Addendum No. 1
CSO-GC-SFS-OH CP3 - CSO Facilities for Gowanus Canal Construction Package CP3
October 12, 2026

Changes to the Bid Documents

CONTRACT TERMS

Item 1. REPLACE Schedule A with the file shown in Attachment No. 1.

SPECIFICATIONS

Item 2. Specification Section 01 11 00 – Summary of Work, REPLACE list of documents available for inspection under Section 1.05.E.1 with the following:

a. Existing Conditions Report – OH, 2026, includes:
    1. Utility Information and As-builts
    2. Subsurface Survey Information
    3. Pre-Demolition Survey (PDS) Report
    4. NYC DSNY Site Improvements to Accommodate Community Composting – December 2014
    5. Geotechnical Investigation Report including:
        1. OH-007 Bulkhead Geotechnical Report (2020)
        2. OH-007 Preliminary Geotechnical Investigation Report (2017)
        3. OH-007 Geotechnical Information from EPA
    6. As-builts for the OH Bulkhead
b. Pre-Design Investigation (PDI) Report (March 2018)
    1. Supplemental PDI (October 2026)
    2. Phase II Investigation Report (February 2026)
c. Construction Protection Plan (CPP)
d. Construction Waste Estimate Report (CWER)
e. Sustainable Material Content Plan (SMCP)
f. Stormwater Pollution Prevention Plan (SWPPP)
g. Green Remediation Plan
h. Community Air Monitoring Plan (CAMP).

Item 3. Specification Section 01 51 00 – Temporary Water and Sanitary, DELETE paragraph 1.02.A, and REPLACE with "No separate payment should be made for performing work required under this Section. All costs for Work required by this Section and the costs/fees for setting up accounts with DEP for the provision and use of potable water to perform the Work included in this Contract shall be included in the applicable lump sum prices, unit prices or allowances as set forth in Section 01 27 00 - Measurement and Payment."

Item 4. Specification Section 01 73 12 – Maintenance of Operations and Construction Staging, ADD the following under Paragraph 3.02.A.5:

d. The pump station control system shall continuously monitor and record wet well and pump operating data. At a minimum, the system shall record the wet well level, pump run status, pump starts and stops, and cumulative run time. The 2nd Ave PS controls shall connect and transmit all recorded data to the Contractor supplied SCADA system for real-time monitoring, alarm management and storing historical data. The SCADA system shall provide trending of wet well level versus pump run time to allow operators to evaluate the flow rates, pump cycling frequency, station utilization, and changes in system performance over time.

Item 5. Specification Section 02 43 10 – Relocation of Utilities, ADD the Con Edison Section U package after Attachment A at the end of the Specification section. Section U package is provided as Attachment No. 2 of this Addendum.

Item 6. Specification Section 07 17 00 – Bentonite Waterproofing and 40 05 07 – Hangers and Supports for Process Piping, REPLACE spec reference throughout from 03 30 10 – Low Carbon Cast-in-place Concrete to Specification 03 30 00 – Cast in Place Concrete.

Item 7. Specification Section 27 42 19 – Public Information Systems, DELETE specification section in its entirety.

Item 8. Specification Section 40 67 16 – PMCS Panels and Enclosures – DELETE "Section 26 43 13 – Low-Voltage Surge Protection Devices" in the second sentence of Paragraph 2.03E.1.c and INSERT "Section 26 35 24 Power Conditioners".

Item 9. Specification 46 21 12 – Mechanically Cleaned Bar Screens, apply the following changes:

1. ADD the following under Section 2.01.C.

   C. Compliance with the requirements of this specification Section may necessitate modifications to the manufacturer's standard equipment. Equipment which is a "standard product" with the manufacturer shall be modified or redesigned from the standard mode, if necessary, or shall be furnished with special features, accessories, special material or finishes, etc. as may be necessary to conform with the requirements shown on the drawings and as specified herein.

2. ADD the word "Minimum" before Screenings removal capacity, cf/hr under Table in Section 2.04.E.1.

Item 10. Specification 41 22 13.13 – Bridge Cranes, DELETE "Hoist inching control" under Section 2.02.J.3.a.2).i.

Item 11. Specification 40 05 56 – Process Valves, Smaller than Four-inch Diameter, apply the following changes to Schedule 40 05 56-2:

a. REPLACE "Actuator Type" with "Operation" in the column headings
b. ADD "316L SS" under the column heading titled "Remarks"

EXHIBITS

Item 12. Include full versions of two of the Exhibits listed in 01 11 00 – Scope of Work, Section 1.05.E.1.b.1 and 2. These reports are provided as Attachment 3 and 4 of this Addendum.

1. Supplemental PDI (October 2026) – The Supplemental PDI is currently shown as draft; however, the data will be treated as final.
2. Phase II Investigation Report (February 2026) – Includes full Appendix B.

GENERAL CONDITIONS TO CONSTRUCTION CONTRACT
(INCLUDING GENERAL CONDITIONS RELATING TO ARTICLE 22 -- INSURANCE)

CONTRACT CSO-GC-SFS-OH CP3

PART I. REQUIRED INFORMATION

INFORMATION FOR BIDDERS **BID BOND** The **Contractor** shall obtain a bid bond in the amount indicated to the right.	5 % of Bid
INFORMATION FOR BIDDERS **PERFORMANCE AND PAYMENT BONDS** The **Contractor** shall obtain performance and payment bonds in the amount indicated to the right.	100 % of Bid
CONTRACT ARTICLE 14. **DATE FOR SUBSTANTIAL COMPLETION** The **Contractor** shall substantially complete the **Work** in the number of calendar days indicated to the right.	1,333 consecutive calendar days
CONTRACT ARTICLE 15. **LIQUIDATED DAMAGES** If the **Contractor** fails to substantially complete the **Work** within the time fixed for substantial completion plus authorized time extensions or if the **Contractor**, in the sole determination of the **Commissioner**, has abandoned the **Work**, the **Contractor** shall pay to the **City** the amount indicated to the right.	$ 32,800 for each consecutive calendar day over substantial completion time
Section 01 32 10 – Progress Schedule Liquidated Damages	$ 500 per day for delay of submittals
Section 01 33 00 - Submittal Procedures Liquidated Damages	$1,500 per each additional submission of a Shop Drawing after the third submission.

CONTRACT ARTICLE 17. **SUB-CONTRACTOR** The **Contractor** shall not make subcontracts totaling an amount more than the percentage of the total **Contract** price indicated to the right.	Not to exceed __49_% of the **Contract** price
CONTRACT ARTICLE 21. **RETAINAGE** The **Commissioner** shall deduct and retain until the substantial completion of the **Work** the percent value of the **Work** indicated to the right.	__5_% of the value of the **Work**
CONTRACT ARTICLE 22. **(Per Directions Below)**	
CONTRACT ARTICLE 24. **DEPOSIT GUARANTEE** As security for the faithful performance of its obligations, the **Contractor**, upon filing its requisition for payment on **Substantial Completion**, shall deposit with the **Commissioner** a sum equal to the percentage of the **Contract** price indicated to the right.	1% of **Contract** price
CONTRACT ARTICLE 24. **PERIOD OF GUARANTEE** Periods of maintenance and guarantee other than the period set forth in Article 24.1 are indicated to the right.	Section 32 90 00 – 2 years from Substantial Completion
CONTRACT ARTICLE 74. **STATEMENT OF WORK** The **Contractor** shall furnish all labor and materials and perform all **Work** in strict accordance with the **Contract Drawings**, **Specifications,** and all **Addenda** thereto**.**	Insert the Required Information Below.

CONTRACT ARTICLE 75. **COMPENSATION TO BE PAID TO CONTRACTOR** The **City** shall pay and the **Contractor** shall accept in full consideration for the performance of the **Contract**, subject to additions and deductions as provided herein, the total sum **shown in the column to the right,** this said sum being the amount at which the **Contract** was awarded to the **Contractor** at a public letting thereof, based upon the **Contractor's** bid for the **Contract.**	Amount for which the **Contract** was awarded: $ _____ [Agency: If the Bid Price, or any portion thereof, is based on unit prices, insert the words "Not to Exceed" before the amount.]

(GENERAL CONDITIONS RELATING TO ARTICLE 22 -- INSURANCE)

PART II. TYPES OF INSURANCE, MINIMUM LIMITS AND SPECIAL CONDITIONS

Note: All certificate(s) of insurance submitted pursuant to Contract Article 22.3. 3 must be accompanied by a Certification by Broker consistent with Part III below and include the following information:

- **For each insurance policy, the name and NAIC number of issuing company, number of policy, and effective dates;**
- **Policy limits consistent with the requirements listed below;**
- **Additional insureds or loss payees consistent with the requirements listed below; and**
- **The number assigned to the Contract by the City (in the "Description of Operations" field).**

Insurance indicated by a blackened box (■) or by X in a ☐ to left will be required under this contract

Types of Insurance (per Article 22 in its entirety, including listed paragraph)	Minimum Limits and Special Conditions
■ Commercial General Liability Art. 22.1.1	The minimum limits shall be $__10,000,000____ per occurrence, $__20,000,000__ for personal and advertising injury, and $__20,000,000___ per project aggregate applicable to this Contract unless the Work requires a permit from the Department of Buildings and greater limits of Commercial General Liability Insurance are required pursuant to 1 RCNY section 101-08. Additional Insureds: 1. City of New York, including its officials and employees, with coverage at least as broad as ISO Forms CG 20 10 and CG 20 37, and 2. All person(s) or organization(s), if any, that Article 22.1.1(b) of the **Contract** requires to be named as Additional Insured(s), with coverage at least as broad as ISO Form CG 20 26. The Additional Insured endorsement shall either specify the entity's name, if known, or the entity's title (e.g., Project Manager). 3. U.S. Environmental Protection Agency 4. New York State Environmental Facilities Corporation 5. New York City Municipal Water Finance Authority

■ Workers' Compensation Art. 22.1.2 ■ Disability Benefits Insurance Art. 22.1.2 ■ Employers' Liability Art. 22.1.2 ☐ Jones Act Art. 22.1.3 ☐ U.S. Longshoremen's and Harbor Workers Compensation Act Art. 22.1.3	Workers' Compensation, Employers' Liability, and Disability Benefits Insurance: Statutory per New York State law without regard to jurisdiction. **Note**: The following forms are acceptable: (1) New York State Workers' Compensation Board Form No. C-105.2, (2) State Insurance Fund Form No. U-26.3, (3) New York State Workers' Compensation Board Form No. DB-120.1 and (3) Request for WC/DB Exemption Form No. CE-200. The City will not accept an ACORD form as proof of Workers' Compensation or Disability Insurance. Jones Act and U.S. Longshoremen's and Harbor Workers' Compensation Act: Statutory per U.S. law.
■ Builders Risk Art. 22.1.4	100 % of total value of **Work** **Contractor** the Named Insured; the **City,** New York State Environmental Facilities Corporation, and New York City Municipal Water Finance Authority, both an Additional Insured and one of the loss payees as its interests may appear. If the **Work** does not involve construction of a new building or gut renovation work, the **Contractor** may provide an installation floater in lieu of Builders Risk insurance. Note: Builders Risk Insurance may terminate upon **Substantial Completion** of the **Work** in its entirety.
■ Commercial Auto Liability Art. 22.1.5	$ 2,000,000 per accident combined single limit If vehicles are used for transporting hazardous materials, the **Contractor** shall provide pollution liability broadened coverage for covered vehicles (endorsement CA 99 48) as well as proof of MCS 90

■ Contractors Pollution Liability Art. 22.1.6	$_2,000,000__ per occurrence $_4,000,000__ aggregate Additional Insureds: 1. City of New York, including its officials and employees, and 2. U.S. Environmental Protection Agency 3. New York State Environmental Facilities Corp. 4. New York City Municipal Water Finance Authority
■ Marine Protection and Indemnity Art. 22.1.7(a)	$_1,000,000_per occurrence $_2,000,0000_ aggregate Note: Contractor shall be required to provide this insurance only should he have deliveries or need access to work from the Gowanus Canal. Additional Insureds: 1. City of New York, including its officials and employees, and 2. _____ 3. _____
■ Hull and Machinery Insurance Art. 22.1.7(b)	$_1,000,000_per occurrence $_2,000,000_ aggregate Note: Contractor shall be required to provide this insurance only should he have deliveries or need access to work from the Gowanus Canal. Additional Insureds: 1. City of New York, including its officials and employees, and 2. _____ 3. _____

■ Marine Pollution Liability Art. 22.1.7(c)	$_1,000,000__ each occurrence Additional Insureds: 1. City of New York, including its officials and employees, and 2. _____ 3. _____

[OTHER] Art. 22.1.8 □ _____	*[If other type(s) of insurance need to be required under the **Contract**, the Contracting Agency should (a) check the box and fill in the type of insurance in left-hand column, and (b) in this right-hand column, specify appropriate limit(s) and appropriate Named Insured and Additional Insured(s). Note that if Railroad Protective Liability Insurance is required, the appropriate Named Insured is the owner of the railroad and there are no additional insureds.]*
[OTHER] Art. 22.1.8 □ _____	*[See directly above.]*

RE : City Work Performed in the Presence of Private Utility Facilities
Project No.: CSO-OH-007 - CP3 - CSO Facilities for Gowanus Canal CP3

Dear Jesse Goldin:

This letter is to certify that **Consolidated Edison** , has requested the inclusion of the attached "Utility Interference (UI) Section: Additional contract requirements applying to work performed in the presence of privately owned utility." The company agrees to abide by the terms of the UI Section and to submit a schedule listing the scope of work, including the items and estimated quantities, and types of utility facilities to be supported and protected at the company's own expenses due to interferences with the Public work.

Sincerely,

Calmore Alman

GENERAL NOTES AND CONDITIONS

GENERAL

1. THE CONTRACTOR SHALL BE REQUIRED, WHEN WARRANTED BY FIELD CONDITIONS, AND AT LOCATIONS DESIGNATED BY THE RESIDENT OR BOROUGH ENGINEER, TO CHANGE THE VERTICAL OR HORIZONTAL ALIGNMENT OF WATER MAINS INCLUDING BUT NOT LIMITED TO ALL ADDITIONAL LABOR, FURNISHING, DELIVERING, AND LAYING OFFSET FITTINGS AND PIPES NECESSARY IN ORDER TO COMPLETE WATER MAIN INSTALLATION AND AVOID ELECTRIC, TELEPHONE, NON COST SHARING GAS, STEAM AND CABLE TV INTERFERENCES IN THE PROJECT AREA. SUCH WORK SHALL BE PERFORMED AS DIRECTED BY THE RESIDENT ENGINEER AND IN ACCORDANCE WITH CONTRACT SPECIFICATIONS AND LATEST EDITION OF THE BUREAU OF WATER SUPPLY STANDARD SPECIFICATIONS. SUCH WORK SHALL BE PAID UNDER APPROPRIATE CITY CONTRACT BID ITEMS AS DETERMINED BY THE RESIDENT ENGINEER.
2. EACH FACILITY OPERATOR SHALL PROVIDE INSPECTORS AT THE WORK SITE TO MONITOR AND INSPECT METHODS OF WORK INCLUDING THE MAINTENANCE AND SUPPORT AND RELOCATION OF UTILITY FACILITIES, VERIFY QUANTITIES AND ITEMS OF UTILITY WORK, COORDINATE ALL PHASES OF THE FACILITY OPERATOR'S OPERATIONS, AND PROVIDE GUIDANCE WITH RESPECT TO BOTH UTILITY INTERFERENCE AND RELOCATION WORK. THE CITY RESIDENT ENGINEER SHALL CONSULT WITH THE FACILITY OPERATOR AND SHALL HAVE COMPLETE AUTHORITY FOR THE ADMINISTRATION OF ALL WORK UNDER THE CONSTRUCTION CONTRACT.
3. ALL PRIVATE UTILITY FACILITY WORK (SUPPORT, PROTECTION, REMOVAL) ASSOCIATED WITH THE NEW YORK CITY TRANSIT AUTHORITY PORTION OF THIS PROJECT SHALL BE PAID DIRECTLY BY THE TRANSIT AUTHORITY AND NOT THE PRIVATE UTILITY FACILITY OPERATORS.
4. ANY REQUESTS FOR ADDITIONAL AND/OR MODIFICATIONS TO THE MAINTENANCE AND PROTECTION OF TRAFFIC (MPT) PLAN, FOR THE PRIVATE UTILITIES, SHALL REQUIRE THE APPROVAL OF THE RESIDENT ENGINEER IN CONSULTATION WITH THE FACILITY OPERATOR. MODIFICATIONS REQUIRED TO PERFORM JB ITEMS, INCLUDED THE UTILITY JOINT BID SCOPE OF WORK, BEYOND THOSE ESTABLISHED IN THE CONTRACT MPT PLAN IS DEEMED INCLUDED IN THE COSTS ASSOCIATED WITH THE APPLICABLE JB CONTRACT BID ITEM.
5. WHEN UTILITY FACILITIES LIE WITHIN OR AT THE LIMITS OF THE PROPOSED CITY TRENCH, THE CONTRACTOR SHALL MODIFY THE SHEETING METHOD, SUBJECT TO THE APPROVAL OF THE FACILITY OPERATOR AND THE RESIDENT ENGINEER. ALL WORK SHALL BE PERFORMED WITHOUT RISKING THE INTEGRITY OF THE UTILITY FACILITIES AND SHALL BE DONE IN ACCORDANCE WITH JB 330E AND ALL SAFETY STANDARDS AS DIRECTED BY THE FACILITY OPERATOR.
6. PAVEMENT RESTORATION FOR ANY CON EDISON WORK PERFORMED OUTSIDE THE CONTRACT LIMITS, SHALL BE PERFORMED IN ACCORDANCE WITH THE REQUIREMENTS OF THE GOVERNMENTAL AUTHORITY HAVING JURISDICTION. USING APPLICABLE BID ITEMS 4.02AG, 4.02CA, AND 4.04HD AS DIRECTED BY THE FACILITY OPERATOR IN CONSULTATION WITH THE RESIDENT ENGINEER.
7. OUTSIDE OF JB 100 SPECIFICATIONS, ANY SUPPORT DESIGN REQUIREMENT SHALL BE PROVIDED BY THE CITY CONTRACTOR AND APPROVED BY THE PRIVATE FACILITY OPERATORS.
8. WHEN OIL-O-STATIC LINES LIE WITHIN OR IN THE LIMITS OF THE PROPOSED MASS EXCAVATION, THE CONTRACTOR SHALL SUPPORT, PROTECT AND MAINTAIN THE OIL-O-STATIC LINES. THE SUPPORT OF THE OIL-O-STATIC LINES INCLUDING THE DESIGN OF THE SUPPORT SYSTEMS, WHICH ARE SUBJECT TO THE APPROVAL OF CON EDISON, SHALL BE INCLUDED IN THE JB 410 ITEM.
9. THE "DIGITAL DATA" IS AN INFORMATIONAL RECORD OF THE APPROXIMATE LOCATIONS OF THE FACILITIES OF CONSOLIDATED EDISON COMPANY OF NEW YORK, INC. ("CON EDISON") BASED ON AVAILABLE RECORDS AND TESTING DATA. NO REPRESENTATION IS MADE AS TO THE ACCURACY OF THE LOCATIONS OF CON EDISON'S FACILITIES AS SHOWN ON THE DIGITAL DATA AND CON EDISON EXPRESSLY DISCLAIMS ANY AND ALL LIABILITY WITH RESPECT TO ANY INFORMATION INCLUDED IN THE DIGITAL DATA.

APPLICABLE CODES AND STANDARDS

1. WHERE DOCUMENTS ARE REFERENCED IN THE GENERAL AND/OR DESIGN NOTES THEY SHALL BE THE LATEST EDITIONS, UNLESS OTHERWISE NOTED.
2. ALL UTILITY WORK PERFORMED BY THE CONTRACTOR SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF THE APPLICABLE UTILITY COMPANY. CONTRACTOR SHALL REVIEW COPIES OF APPLICABLE UTILITY STANDARDS AS THEIR REQUIREMENTS MAY EXCEED/DIFFER FROM THOSE REQUIRED BY NYC, NYS OR OSHA. IN ALL CASES THE STRICTER REQUIREMENT SHALL CONTROL.
3. CHANGES/MODIFICATIONS TO CITY SEWERS, CATCH BASINS, CHUTE CONNECTIONS, AND WATER MAINS SHALL CONFORM TO NYCDDC SPECIFICATIONS AND AS SHOWN ON APPLICABLE JOINT BID SPECIFICATIONS.
4. THE CONTRACTOR WILL ADHERE TO ALL CODE 753 REQUIREMENTS PRIOR TO PERFORMING ANY EXCAVATIONS.
5. IN AREAS WHERE CONGESTED UNDERGROUND INFRASTRUCTURES EXIST, THE CITY RESIDENT OR BOROUGH ENGINEER MAY WAIVE CITY STANDARD MINIMUM CLEARANCE REQUIREMENTS. WHEN CLEARANCES ARE LESS THAN 12 INCHES, A NEOPRENE/POLYETHYLENE SHIELD, FURNISHED BY THE APPLICABLE FACILITY OPERATOR(S) SHALL BE INSTALLED BY THE CONTRACTOR, AS DIRECTED BY THE RESIDENT ENGINEER IN CONSULTATION WITH THE FACILITY OPERATOR AND IS CONSIDERED PART OF ALL WORK ITEM SPECIFICATIONS. PAYMENT FOR THIS WORK SHALL BE DEEMED INCLUDED IN THE APPROPRIATE BID ITEM.
6. THE FOLLOWING SPECIFICATIONS ARE AVAILABLE FOR CONTRACTOR REVIEW WITH THE DDC:
   - A. CON EDISON STEAM SPECIFICATION 122, LATEST REVISION
   - B. CON EDISON TRENCHING MANUAL, LATEST REVISION
   - C. CON EDISON GAS GENERAL SPECIFICATION NO. 117, LATEST REVISION
   - D. GAS CONSTRUCTION SPECIFICATION NO. 900, LATEST REVISION
   - E. BELL SYSTEM PRACTICE 622-505-210, DATED APRIL 1974 – MANHOLES
   - F. BELL SYSTEM PRACTICE 919-240-300, DATED DEC. 1974 – MANHOLES
   - G. CON EDISON CONSTRUCTION STANDARDS, SPECIFICATIONS AND DRAWINGS FOR EXCAVATING TRENCHES AND OPENINGS AND INSTALLING OUTSIDE PLANT ELECTRIC FACILITIES.

PROJECT DOCUMENTS

1. THIS SET OF UTILITY DRAWINGS TOGETHER WITH THE CONTRACT AND NOTED UTILITY SPECIFICATIONS, CONSTITUTES THE COMPLETE DOCUMENTATION BY WHICH ALL CONTRACT WORK SHALL FOLLOW.
2. IN PROJECTS WITH UNDEFINED SCOPE, THE CONTRACTOR SHALL REQUEST UTILITY MAPS & PLATES FROM THE UTILITY OPERATOR FIELD REPRESENTATIVE. ALL INFORMATION CONTAINED IN SUCH DOCUMENTS IS SUBJECT TO FIELD VERIFICATION.
3. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO PROVIDE PROPER SHORING AND BRACING DURING CONSTRUCTION WHENEVER AND WHEREVER NECESSARY, WHICH SHALL NOT BE REMOVED AS LONG AS REQUIRED FOR SAFETY AS DIRECTED BY THE RESIDENT ENGINEER.
4. IN THE EVENT THAT CERTAIN DETAILS OF CONSTRUCTION ARE NOT FULLY SHOWN OR NOTED ON DRAWINGS, CONSTRUCTION SHALL BE OF THE SAME TYPE AS FOR SIMILAR CONDITIONS THAT ARE SHOWN OR NOTED, SUBJECT TO THE APPROVAL OF THE FACILITY OPERATOR REPRESENTATIVE AND RESIDENT ENGINEER.

MATERIALS

1. ALL MATERIALS SUPPLIED BY THE FACILITY OPERATOR(S) SHALL BE DELIVERED FREE ON BOARD (F.O.B.) TO THE CONTRACTOR'S REQUESTED LOCATION. IT SHALL THEN BE THE CONTRACTOR'S RESPONSIBILITY AND EXPENSE TO THE DELIVER AND/OR DISTRIBUTE THE MATERIAL SUPPLIED BY THE FACILITY OPERATOR(S) TO THE REQUIRED JOB LOCATION(S) THEREAFTER.
2. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY, TO INSPECT, UNLOAD AND VERIFY THE QUANTITIES OF FURNISHED SPECIALIZED MATERIAL IMMEDIATELY UPON DELIVERY AND ADVISE THE FACILITY OPERATOR(S) OF ALL DAMAGED MATERIAL. THE CONTRACTOR, AT NO ADDITIONAL EXPENSE TO THE CITY OR THE FACILITY OPERATOR(S), SHALL REPLACE ANY MATERIAL, WHICH IS DAMAGED OR LOST AFTER THE CONTRACTOR'S INSPECTION AND ACCEPTANCE. ALL ASSOCIATED COSTS ARE DEEMED INCLUDED IN THE APPLICABLE JOINT BID ITEMS.
3. GENERAL BACKFILL AND BEDDING MATERIALS FOR EXCAVATION AROUND CON EDISON FACILITIES SHALL BE PERFORMED IN ACCORDANCE WITH EO-1180, EO-1181, EO-8085, AND THE APPROPRIATE FACILITY INSTALLATION SPECIFICATION. ALL OTHER BACKFILLING SHALL SATISFY NYCDOT METHODS AND STANDARDS. ALL COSTS ASSOCIATED SHALL BE INCLUDED IN THE APPLICABLE JB ITEMS.

CONSTRUCTION SEQUENCE NOTES

THE FOLLOWING CONSTRUCTION SEQUENCING NOTES ARE ISSUED TO SUPPLEMENT THE CONTRACT DOCUMENTS INCLUDING BUT NOT LIMITED TO THE MAINTENANCE AND PROTECTION OF TRAFFIC PLANS AND JOINT BID ITEM SPECIFICATIONS. THE NOTES PROVIDED BELOW SHALL BE USED IN CONJUNCTION WITH SAID CONTRACT DOCUMENTS TO ESTABLISH THE SEQUENTIAL ORDER OF INSTALLATION OF NEW COMMUNICATION AND ELECTRIC UTILITIES, NON COST SHARING GAS, STEAM, AND CABLE TV AND THE CITY PLANNED WORK AS SPECIFIED WITHIN THE CONTRACT DOCUMENTS. THE CONTRACTOR SHALL SUBMIT A WORK SCHEDULE THAT WILL INCLUDE THE UTILITY WORK TO VERIZON, CON EDISON, TIME WARNER CABLE AND RCN, FOR APPROVAL BY THE UTILITY FACILITY OPERATORS IN CONSULTATION WITH THE RESIDENT ENGINEER.

CONSTRUCTION SEQUENCING FOR PRIVATE UTILITY FACILITIES AND CITY WORK WITHIN THE ABOVE REFERENCED PROJECT

1. PRIOR TO MASS EXCAVATING, THE CONTRACTOR SHALL COORDINATE WITH ALL UTILITY FACILITY OPERATORS AND APPLICABLE CITY AGENCIES INCLUDING THE NEW YORK CITY TRANSIT AUTHORITY (NYCTA).
2. THE CONTRACTOR SHALL REMOVE THE EXISTING SURFACE AND BASE PAVEMENT FOR A WIDTH OF ROADWAY SPECIFIED IN THE MPT PLANS. CITY CONTRACT BID ITEMS, FOR THIS WORK, SHALL APPLY. AS ENCOUNTERED, THE CONTRACTOR SHALL REMOVE ABANDONED TROLLEY TRACKS, INCLUDING YOKES AND OTHER APPURTENANCES.
3. THE CONTRACTOR SHALL PERFORM MASS EXCAVATION AS SPECIFIED IN JOINT BID ITEM NUMBER JB 410 – "MASS EXCAVATION", AND INDICATED IN THE THE MASS EXCAVATION PLAN. THE WIDTH OF EXCAVATION SHALL BE AS SPECIFIED IN THE CONTRACT DOCUMENTS IN ACCORDANCE WITH THE MPT PLANS AND AS DIRECTED BY ECS AND CON EDISON REPRESENTATIVES IN CONSULTATION WITH THE RESIDENT ENGINEER. THE LENGTH OF THE EXCAVATION SHALL BE AS REQUIRED TO FACILITATE THE DISPOSAL OF ALL EXCAVATED AND/OR REMOVAL OF MATERIALS. THE TOTAL LENGTH OF MASS EXCAVATION OPEN AT ANY ONE TIME SHALL BE CONSISTENT WITH THE MPT PLANS.
4. VERIZON, TIME WARNER CABLE, RCN AND CON EDISON REPRESENTATIVES, IN CONSULTATION WITH THE RESIDENT ENGINEER AND, IN COOPERATION WITH THE CONTRACTOR SHALL DETERMINE A SUITABLE LOCATION FOR INSTALLATION OF THE NEW PRIVATE UTILITY FACILITIES. ONCE THE LOCATIONS HAVE BEEN ESTABLISHED, THE CONTRACTOR WILL ASSUME FULL RESPONSIBILITY FOR THE LANES SELECTED AND WILL THEREBY GUARANTEES THAT THE NEW FACILITIES SHALL NOT OBSTRUCT THE PLANNED CITY CONTRACT WORK. IT IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR TO COMMUNICATE IN WRITING, FOR EACH UTILITY LANE SELECTED, WHERE IN THE CONTRACTOR'S OPINION A LOCATION FOR THE INSTALLATION OF THE NEW UTILITY FACILITIES WILL OBSTRUCT THE PLANNED CITY WORK, SO THAT AN ALTERNATE APPROACH IS EVALUATED TO MITIGATE THE IMPENDING INTERFERENCE(S).
5. THE MASS EXCAVATION AND CONSTRUCTION OF NEW UTILITIES SHALL BE PERFORMED IN ACCORDANCE WITH THE CONTRACT DOCUMENTS AND STAGED IN ACCORDANCE WITH THE MAINTENANCE AND PROTECTION OF TRAFFIC (MPT) PLANS.
6. THE CONTRACTOR SHALL REMOVE EXISTING OBSTRUCTIONS, INCLUDING BUT NOT LIMITED TO RETIRED AND ABANDONED EXISTING FACILITIES AND STRUCTURES, AS REQUIRED FOR INSTALLATION OF THE NEW UTILITY FACILITIES, CATCH BASINS, CHUTE CONNECTIONS, WATER MAINS, ETC. THE REMOVAL AND RELOCATION WORK SHALL BE COVERED UNDER APPROPRIATE CITY AND/OR JOINT BID ITEMS AND SHALL BE COORDINATED WITH VERIZON, TIME WARNER CABLE AND CON EDISON REPRESENTATIVES, IN CONSULTATION WITH THE RESIDENT ENGINEER.
7. THE CONTRACTOR SHALL PERFORM MODIFICATIONS TO EXISTING UTILITY FACILITIES AND/OR STRUCTURES TO ACCOMMODATE THE NEW UTILITY FACILITIES IN ACCORDANCE WITH THE CONTRACT DOCUMENTS OR AS DIRECTED BY THE FACILITY OPERATOR IN CONSULTATION WITH THE RESIDENT ENGINEER.
8. THE CONTRACTOR SHALL INSTALL THE NEW FACILITIES IN ACCORDANCE WITH THE CONTRACT DOCUMENTS.
9. UPON COMPLETION OF THE INSTALLATION OF THE UTILITY WORK, THE CONTRACTOR SHALL BACKFILL, COMPACT AND INSTALL TEMPORARY PAVEMENT AS DIRECTED BY THE FACILITY OPERATOR IN CONSULTATION WITH THE RESIDENT ENGINEER.
10. WHERE APPROPRIATE, AND AS DIRECTED BY THE FACILITY OPERATORS IN CONSULTATION WITH THE RESIDENT ENGINEER, THE CONTRACTOR SHALL BE PERMITTED TO INSTALL THE CITY WATER MAINS, CATCH BASINS, CATCH BASIN CONNECTIONS, SEWERS, SEWER MANHOLES, AND OTHER CITY CONTRACT WORK ITEMS AND APPURTENANCES IN COORDINATION AND DURING THE MASS EXCAVATION OPERATION, ONLY IF THIS PHASING SERVES TO BENEFIT THE SEQUENCING OF THE PROJECT THAT WILL REDUCE THE OVERALL PROJECT TIME DURATION AND DOES NOT ADDITIONALLY BURDEN THE PRIVATE UTILITIES WITH UNANTICIPATED FINANCIAL EXPENSES, AND ONLY IF APPROVED BY THE PRIVATE FACILITY OPERATORS IN CONSULTATION WITH THE RESIDENT ENGINEER.
11. THE CONTRACTOR EXPLICITLY ASSUMES FULL RESPONSIBILITY AND ANY AND ALL ADDITIONAL COSTS INCURRED IF HE CHOOSES TO MODIFY THIS SEQUENCING PLAN WITHOUT THE CONSENT OF THE FACILITY OPERATORS IN CONSULTATION WITH THE RESIDENT ENGINEER.
12. ALTERNATE SEQUENCING IN PART OR TOTAL WILL BE CONSIDERED FOR APPROVAL, IF PROPOSED BY THE CONTRACTOR IN WRITING, TO THE FACILITY OPERATORS AND THE RESIDENT ENGINEER.
13. SEQUENCING OF LAYOUT WORK FOR PRIVATE UTILITIES, WHICH RELIEVES DIRECT INTERFERENCE, SHALL BE SCHEDULED, SEQUENCED AND PERFORMED PRIOR TO THE INSTALLATION OF CITY IMPROVEMENTS THAT ARE IMPACTED BY THE DIRECT INTERFERENCE.

SPECIAL CONDITIONS

1. TIME REQUIRED TO ACCOMPLISH ALL UTILITY SPECIALTY WORK, WHICH SHALL BE PERFORMED BY OTHERS HIRED BY THE FACILITY OPERATOR(S), HAS BEEN INCLUDED AS INDICATED IN SCHEDULE A, ALLOCATED FOR THIS PROJECT. UTILITY SPECIALTY WORK INCLUDES BUT IS NOT LIMITED TO ALL CABLE WORK INCLUDING; INSTALLATION, REMOVAL, SPLICING VERIFICATION OF LIVE/DEAD FACILITIES, INSTALLATION OF ALL TYPES OF GAS PIPING, CUTTING AND CAPPING GAS MAINS, LIVE GAS CONNECTIONS, SERVICE REPLACEMENTS, TESTING LIVE/DEAD GAS MAINS, ALL LIVE STEAM WORK, FLANGE REMOVAL, PIPE REPLACEMENT, WELDING, STEAM TRAP REPLACEMENTS, STEAM SERVICE REPLACEMENTS, ALL ASSOCIATED STEAM STRUCTURES REPLACEAND STEAM ANCHORS. THE CONTRACTOR WILL ENSURE THAT COMPLETE AND SAFE ACCESS TO THE PROJECT SITE IS MADE AVAILABLE TO THE SPECIALTY CONTRACTOR UPON REQUEST BY THE FACILITY OPERATOR REPRESENTATIVE AND IN WITH RESIDENT ENGINEER. THE CONTRACTOR MAY BE REQUIRED TO ASSIST THE FACILITY OPERATOR'S SPECIALTY CREWS (ELECTRIC, GAS, STEAM AND TELECOMMUNICATIONS) PERFORMING SPECIALTY WORK NOT INCLUDED IN CONTRACT BID ITEMS. THIS WORK MAY INCLUDE BUT IS NOT LIMITED TO, SUPPORTING, PROTECTING AND REMOVING EXISTING AND INSTALLING NEW FACILITIES. WHERE APPLICABLE, CONTRACTOR CONSTRUCTION FIELD SUPPORT WILL BE PAID UNDER CONTRACT BID ITEMS JB 450.1,JB 450.2 AND 450.3.
2. THE PRICE TO COVER FOR ALL JOINT BID ITEMS SHALL NOT INCLUDE ITEMS OF WORK WHICH ARE PAID FOR BY THE UTILITIES UNDER THE APPLICABLE SHARED COST ITEMS, INCLUDING, BUT NOT LIMITED TO, MPT ITEMS, TRAFFIC ENFORCEMENT AGENTS, FIELD OFFICE, ETC.
3. SPECIALTY WORK WHICH SHALL BE PERFORMED BY THE FACILITY OPERATOR(S) OR OTHERS HIRED BY THE FACILITY OPERATOR(S) SHALL INCLUDE BUT IS NOT BE LIMITED TO:

   3.1 VERIZON

   A. ALL CABLE WORK – EX. PLACING, SPLICING, VERIFICATION OF LIVE/DEAD FACILITIES, FAILURES, ETC. – SHALL BE PERFORMED BY VERIZON TENANTS.

   3.2 TIME WARNER CABLE

   A. RINGING AND RIPPING IRON/STEEL CONDUITS WHEN CABLES MUST BE REMOVED FROM THE CONDUITS SHALL BE PERFORMED BY TWC FORCES.
   B. ALL CABLE WORK – EX. PLACING, SPLICING, VERIFICATION OF LIVE/DEAD FACILITIES, FAILURES, ETC. – SHALL BE PERFORMED BY TWC TENANTS.

   3.3 AT&T AND RCN

   A. RINGING AND RIPPING ANY CONDUIT CONTAINING AN ACTIVE "LIVE" CABLE SHALL BE PERFORMED BY AT&T FORCES
   B. ALL CABLE WORK – EX. PLACING, SPLICING, VERIFICATION OF LIVE/DEAD FACILITIES, FAILURES, ETC. – SHALL BE PERFORMED BY AT&T FORCES.

   3.4 CON EDISON

   A. FREE, CLEAR, AND UNIMPEDED ACCESS TO ALL CON EDISON FACILITIES LOCATED INSIDE THE PROJECT LIMITS AND CONTRACTOR'S WORK ZONE/MPT SHALL BE DEEMED INCLUDED IN THE CONTRACT PRICES. NO ADDITIONAL PAYMENTS WILL BE FURNISHED FOR ACCESS TO THE SITE.
   B. UPON COMMENCENT OF THE WORK THE CONTRACTOR SHALL PROVIDE THE UTILITY OPERATOR, IN WRITING, THE NAME OF THE DESIGNATED ELECTRICALLY COMPETENT QUALIFIED MUNICIPAL CONTRACTOR EMPLOYEE.
   C. CON EDISON SHALL PERFORM ALL CABLE WORK – INSTALLATION, REMOVAL, SPLICING, AND VERIFICATION OF LIVE/ DEAD FACILITIES AND/OR FAILURE REPLACEMENTS.
   D. WHEN APPLICABLE, GAS WORK SHALL BE PERFORMED BY APPROVED AND QUALIFIED CONTRACTOR(S). THE CONTRACTOR(S) SHALL BE "GAS QUALIFIED CONTRACTOR(S)" AND/OR "GAS QUALIFIED SUB-CONTRACTOR(S)" AS DEFINED BY THE UTILITY OPERATOR(S). THE CONTRACTOR SHALL PERFORM INSTALLATION OF ALL TYPES OF GAS PIPING INCLUDING BUT NOT LIMITED TO CUTTING AND CAPPING GAS MAINS, LIVE GAS CONNECTIONS, SERVICE REPLACEMENTS, AND TESTING LIVE GAS MAINS, AS NEEDED.
   E. WHEN APPLICABLE, TRENCHING FOR GAS WORK WILL BE COVERED BY ITEM 6.09 UNDER THE EP-7 SPECIFICATIONS.
   F. DURING THE PERIOD FROM JUNE 1ST TO SEPTEMBER 15TH, SCHEDULING OF CON EDISON CABLE WORK WILL BE CONTINGENT UPON SYSTEM AND WEATHER CONDITIONS.
   G. DURING THE PERIOD FROM OCTOBER 1ST TO APRIL 15TH, SCHEDULING OF CON EDISON GAS AND STEAM WORK WILL BE CONTINGENT UPON SYSTEM AND WEATHER CONDITIONS.
   H. PERFORM ALL APPLICATION OF FIELD COATING AND WRAPPING ON OIL-O-STAIC FEEDER PIPES AT VARIOUS LOCATIONS, AS DIRECTED BY CON EDISON REPRESENTATIVES.
   I. ANY QUESTION ABOUT THE NATURE, TYPE, VOLTAGE AND LOCATION OF ENERGIZED OVERHEAD ELECTRICAL LINES OR EQUIPMENT WITHIN THE GEOGRAPHICAL LIMITS OF A NYCDDC PROJECT WORK SHALL BE DIRECTED TO THE AUTHORIZED CON EDISON REPRESENTATIVE. UNDER NO CIRCUMSTANCE SHALL THE CONTRACTOR BE PERMITTED TO CONNECT OR TIE OFF OTHER UTILITY CABLES AND WIRES, SUCH AS TELEPHONE, CABLE TV AND FIRE ALARM, TO CON EDISON OVERHEAD FACILITIES.

   CON EDISON OVERHEAD ELECTRICAL DISTRIBUTION SYSTEMS

   CON EDISON'S OVERHEAD ELECTRIC DISTRIBUTION SYSTEM CONSISTS OF TWO VOLTAGE CLASSIFICATIONS, PRIMARY AND SECONDARY SYSTEMS. THE PRIMARY SYSTEM HAS VOLTAGES IN EXCESS OF 2,000 VOLTS BETWEEN ANY SINGLE CONDUCTOR AND GROUND, AND A VOLTAGE DIFFERENTIAL GREATER THAN 4,000 VOLTS BETWEEN ANY PAIR OF CONDUCTORS. THE SECONDARY SYSTEM HAS VOLTAGES RANGING FROM 120 TO 477 VOLTS.

   PRIMARY SYSTEMS

   PRIMARY SYSTEM CONDUCTORS ARE FOUND IN THE UPPER PART OF POLES AND ARE SOMETIMES CONNECTED TO TRANSFORMERS. PRIMARY CONDUCTORS MAY BE JACKETED OR BARE WIRE. THE JACKETING IS NOT INTENDED TO OFFER ANY PERSONAL PROTECTION OR INSULATING VALUE AGAINST ELECTRICAL HAZARD. THEREFORE, CONTRACTOR PERSONNEL AND EQUIPMENT SHALL MAINTAIN A 10 FEET CLEARANCE FROM THE CLOSEST PRIMARY CONDUCTOR, UNLESS APPROVED CONDUCTOR PROTECTION IS INSTALLED AND A 3 FEET MINIMUM CLEARANCE CAN BE OBTAINED.

   CON EDISON ALSO UTILIZES AN AERIAL CABLE SYSTEM THAT OPERATES AT PRIMARY VOLTAGES. AERIAL CABLE IS ELECTRICALLY INSULATED UNDERGROUND-TYPE CABLE, WHICH IS INSTALLED ON A MESSENGER WIRE AND HAS A GROUNDED EXTERIOR METALLIC SHEATH. CONTRACTOR PERSONNEL AND EQUIPMENT SHALL MAINTAIN A MINIMUM CLEARANCE OF 3 FEET FROM THESE FACILITIES.

   SECONDARY SYSTEMS

   CON EDISON'S SECONDARY SYSTEM CONDUCTORS ARE NORMALLY FOUND ON POLES ABOVE THE TELEPHONE CABLES AND CABLE TV WIRES. THEY PROVIDE POWER TO CUSTOMER SERVICE POINTS THROUGH SEVERAL CONFIGURATIONS THAT MAY CONSIST OF SINGLE OR MULTIPLE CONDUCTORS, STREETLIGHTS AND TRAFFIC SIGNALS.

   CONTRACTOR PERSONNEL AND EQUIPMENT SHALL MAINTAIN A 10 FEET CLEARANCE FROM THE CLOSEST SECONDARY CONDUCTOR, UNLESS APPROVED CONDUCTOR PROTECTION IS INSTALLED AND A 3 FEET MINIMUM CLEARANCE CAN BE OBTAINED.

   PRIMARY AND SECONDARY RISERS

   THE CONTRACTOR MAY ENCOUNTER LOCATIONS WHERE THERE IS A TRANSITION OF CABLE SYSTEMS FROM OVERHEAD TO UNDERGROUND. THE CONDUCTORS ARE INSULATED AND HOUSED IN CONDUIT. CONTRACTOR PERSONNEL AND EQUIPMENT ARE TO AVOID CONTACT WITH THESE FACILITIES.

   CONTRACTOR SHALL REFER TO SKETCHES JB 350A AND 350B FOR ADDITIONAL INFORMATION ABOUT THE TYPICAL ARRANGEMENT AND CLEARANCE REQUIREMENTS OF OVERHEAD ENERGIZED CONDUCTORS.

Guideline Document for Public Improvement

CONST- 029 Revision Number 5

Purpose:	To update the Public Improvement Contractor Guideline document for safe work practices on Con Edison underground electric systems.		
Revision Date:	11-01-2022	Next Revision Due Date:	11-01-2027
Supersedes Date:	7-30-2020	Revision Cycle Period:	Once every 5 years

TYPE	NAME	DATE
EH&S	Glenn D. Newell	11/01/2022
Technical	S. Bux & E. Chiarelli	11/01/2022
Legal	Joeann Walker	11/01/2022

Summary of Changes:
1. Updated/Revised All Sections
2. Added New Appendices A & B

Training Requirements - N/A

DOJT/Course #, etc. Associated with this Operating Document:
None

Subject Matter Expert:	Eduardo Chiarelli	Approved Date:	11/01/2022	E. Chiarelli 11/3/2022
Approver Name:	Cherno Cham	Approved Date:	11/01/2022	11/03/2022

Paper copies of Operating Documents are uncontrolled and therefore may be outdated. Verify current version prior to use.

Consolidated Edison Company of New York, Inc.

Guideline

For

Safe Entry into Sub-Surface Structures (Electrical Enclosed Space),

Moving Energized Underground Cables

Removal of Conduit from Cables, and

Sub-Surface Structure Break Out, Rebuild & Breaking Out a Point of Entry (POE's) Into Sub-Surface Structures

Performed by

Municipal Contractors

APPENDIX – A – Breaking Out Conduit Checklist, On-the-Job Training (OJT) & Video 19
Appendix B – PI Check Point Tasks..... 28

1.0 Definitions

1.1 Competent Person – As a general rule, a Competent Person is an individual who, by way of training and/or experience, is knowledgeable of OSHA and other applicable standards, can identify workplace hazards relating to the specific operation and is designated by the employer with the authority to take all appropriate actions necessary to comply with all applicable standards and take prompt corrective measures to eliminate the hazards. Some OSHA standards add additional specific requirements that must be met by the Competent Person.

1.2 Attendant – An authorized individual who is stationed outside a sub-surface structure or an Electrical Enclosed Space to monitor the authorized entrants and to perform duties assigned including aiding individual(s) inside the sub-surface structure or Electrical Enclosed Space.

1.3 Electrical Enclosed Space – OSHA defines an Electrical Enclosed Space as a working space, such as a manhole, vault, tunnel, service box, or shaft, used for the operation and maintenance of electric power generation, transmission, and distribution lines and equipment. An Electrical Enclosed Space has a limited means of egress or entry and is designed for periodic entry under normal operating conditions. Under normal conditions, an Electrical Enclosed Space does not contain a hazardous atmosphere but may contain a hazardous atmosphere under abnormal conditions.

1.4 CET Specification – CET Specification defining private utility work within Municipal Construction Contracts.

1.5 JB Specification – Joint Bid specification defining private utility work within a NYC DDC Capital contract.

1.6 Public Improvement Representative – Con Edison employee, (Inspector, Construction Representative, Chief Construction Inspector, Project Specialist, or Manager) assigned to the Public Improvement section.

1.7 Municipal Contractor – Construction municipal contractor performing work for Municipal, State or other Public Agencies or Authorities.

1.8 Electrically Competent Qualified Municipal Contractor – is a Municipal Contractor employee designated and documented by the Municipal Contractor employer, in writing, as the electrically competent and qualified person who, by way of training and/or experience has the skills and techniques necessary to distinguish exposed live parts from other parts of electrical equipment, can identify non-insulated conductors from insulated conductors and/or cables and has the knowledge of the precautionary techniques, personal protective equipment, insulating and shielding materials, and insulated tools that are required for working on or near exposed energized electrical equipment. The Electrically Competent Qualified Municipal Contractor (ECQMC) employee can identify varying workplace electrical hazards relating to the specific operation and has the authority to take appropriate actions, as required. To meet the task specific qualifications of this guideline, the ECQMC employee must be familiar with this document, be able to demonstrate adherence, conduct job briefings and be present during critical tasks and/or operations to ensure that all crew members understand hazards associated with the job, work

procedures involved, special precautions, energy source controls and personal protective equipment requirements. The ECQMC should be onsite during the performance of all tasks in which ECQMC employees may be exposed to electrical hazards either noted in applicable sections of this guideline and/or listed in Appendix B – PI Check Point Tasks.

2.0 References

2.1 OSHA Section 1910.269 – Electric Power Generation, Transmission & Distribution & 1926 Subpart V –Electric Power Transmission and Distribution

2.2 Training

The OSHA Office of Training and Education (OTE) develops, directs, oversees, manages and ensures implementation of OSHA's national training and education policies and programs in support of OSHA's strategic goals with the objective of reducing occupational hazards through direct intervention, promoting a safety and health culture through compliance assistance, cooperative programs and strong leadership and maximizing OSHA effectiveness and efficiency by strengthening capabilities and infrastructure.

All Municipal Contractor employees shall be trained in and familiar with the safety-related work practices, safety procedures, and other safety requirements in section 1910.269(a)(2) and 1926 Subpart V that pertains to the Municipal Contractor employees' respective job assignments. Municipal Contractor employees shall also be trained in and familiar with any other safety practices, including emergency procedures, such as manhole rescue, that are not specifically addressed by this referenced section but that is related to their work and is necessary for their safety.

Con Edison manhole inspection and underground awareness training can be scheduled through the Con Edison TLC upon request of the municipal contractor. OSHA 10 certification cards and CPR / First Aid training are prerequisites.

2.2.1 Electrically Competent Qualified municipal contractors shall also be trained and competent in:

a- The skills and techniques necessary to distinguish exposed live parts from other parts of electrical equipment

b- The skills and techniques necessary to determine exposed live parts from other parts, (determination of non-insulated conductors from insulated conductors / cables).

c- The knowledge of the precautionary techniques, personal protective equipment, insulating and shielding materials, and insulated tools that are required for working on or near exposed energized parts of electrical equipment. Generally, the Municipal Contractor will not be required to work on or near exposed/non-insulated energized parts of electrical equipment or cables. In the event special conditions exist requiring working near exposed/non insulated energized parts of electrical equipment or

cables, the Municipal Contractor shall cease working and immediately contact the authorized Con Edison Inspector so that a further assessment of the condition can be evaluated, and appropriate guidance provided.

d- The Electrically Competent Qualified Municipal Contractor employee shall determine, through regular supervision and through inspections conducted on at least an annual basis that each Municipal Contractor employee is complying with the safety-related work practices outlined in this guidance document. Prior to entry into structures outlined in this procedure, the ECQMC employee shall ensure that any employee entering is trained and qualified.

2.2.2 A Municipal Contractor employee shall receive additional training (or retraining) by the Electrically Competent Municipal Contractor under any of the following conditions:

a- If the Electrically Competent Qualified Municipal Contractor employee indicates that the Municipal Contractor employee is not complying with safety-related work practices

b- If new technology, new types of equipment, or changes in procedures necessitate the use of safety-related work practices that are different from those which the Municipal Contractor employee would normally use

c- If the Municipal Contractor employee must employ other safety-related work practices that are not normally used or that require modification from those stated in this guidance document

Note: OSHA requires retraining before commencing with a task that has not been performed within one year.

The required training shall be of the classroom and/or on-the-job type. The training shall establish Municipal Contractor proficiency in the work practices required and shall introduce the procedures necessary for compliance. The Electrically Competent Qualified Municipal Contractor shall certify that each Municipal Contractor employee has received the training required and retains records of this training to be supplied upon request by Con Edison.

3.0 Safe Entry into Sub-Surface Structures, (Electrical Enclosed Space)

All subsurface electric cable systems and related components shall be considered to be energized until they have been verified as being de-energized by qualified Con Edison electrical personnel. Prior to the state of conduit removal operations, the identity and content of the facility (conduit and cable contained therein) shall be

verified utilizing applicable Con Edison maps & plates. In case of any safety concern, the option of de-energizing shall be discussed with the PI Representative. Caution shall always be employed whenever conduits are opened to expose the interior, even if the Con Edison maps and plates indicate no live facilities.

3.1 Purpose

To establish a guideline that shall be employed for safe entry into Con Edison sub-surface structures by Municipal Contractors.

3.2 Application

Municipal Contractor personnel

3.3 Guideline

This guideline provides the requirements for practices that shall be employed for safe entry into Con Edison sub-surface structures. Municipal Contractor personnel requiring entry into Con Edison sub-surface structures shall adhere to this guideline.

3.4 Inspection/Testing

Prior to entry into a Con Edison sub-surface structure, properly trained and qualified Con Edison electrical personnel must conduct an inspection. The inspection will determine if the condition of the electrical facilities contained therein is sufficient to allow need based unrestricted access. The Con Edison electrical personnel will communicate to both PI Representative and to the ECQMC personnel any safety precautions to be taken and that the subsurface structure is safe for entry and document such findings. Any condition deemed to be un-safe through this formal inspection process would preclude granting access.

An inspection must take place daily prior to Municipal Contractor entry. Once the cover is placed on the electric subsurface structure another inspection must occur prior to Municipal Contractor entry unless the ECQMC has met the requirements outlined in Section 4.7.a. Inspections include but are not limited to:

1) Testing for stray voltage by a qualified Con Edison employee or an ECQMC employee who has completed applicable Con Edison training courses.

2) Completion of atmospheric testing.

3) Determination that it is safe to enter the space.

4) A visual inspection for any abnormalities previously defined.

5) Communication of inspection results and hazards to the Con Edison inspectors and the municipal contractor supervisor.

6) A copy of the underground inspection form can be reviewed in the field with the PI Representative in consultation with the qualified Con Edison electrical personnel upon request by the ECQMC.

3.5 Job Briefing

The Electrically Competent Qualified Municipal Contractor in charge shall conduct a job briefing with the municipal contractor's employees involved before they start the job. The briefing shall cover: the hazards associated with the job; work procedures involved; special precautions; and personal protective equipment requirements. The Electrically Competent Qualified Municipal Contractor shall instruct that all cables are to be treated as energized. Additional briefings shall be held if significant changes, which might affect the safety of the municipal contractor's employees, occur during performance of the work. The Electrically Competent Qualified Municipal Contractor shall document completion of the job briefing. A copy of the documented job briefing shall be available upon request by Con Edison.

3.6 Attendants

While work is performed in a Con Edison sub-surface structure, a Municipal Contractor Attendant shall be available in the immediate vicinity to render emergency assistance. Sub-surface structure Attendants shall comply with applicable OSHA requirements.

3.7 Hazardous Atmosphere

Municipal Contractor personnel shall perform a documented hazardous atmosphere test before entry into any Con Edison sub-surface structure and perform continuous air monitoring in compliance with applicable OSHA requirements. Any atmospheric reading deemed to be un-safe would prohibit access to the structure. The Municipal Contractor shall immediately notify the authorized Con Edison Inspector.

3.8 Personal Protective Equipment

Municipal Contractor personnel requiring entry into Con Edison sub-surface structures shall refer to and comply with applicable OSHA requirements regarding the use of Personal Protective Equipment when performing this work. Con Edison also requires that Municipal Contractor personnel assigned to work inside Con Edison sub-surface structures shall always wear Flame Resistant (FR) Clothing with a rating of 8 cal/cm^2 or HR2, wear a retrieval harness, and that a retrieval device be on location. In addition, an atmospheric tester must be in use continuously anytime a structure is occupied. See section 3.9 for Matrix on Con Edison's Personal Protective Equipment Guideline.

26	Build/remove shunt box w/ energized cable inside	Y	Y				Y

3.10 Access

Municipal Contractor personnel shall not climb into or out of Con Edison sub-surface structures by stepping on cables or hangers.

4.0 Removal of Conduit from Cables, Moving Energized Underground Cables & Working in Open Trenches / Excavations that Contain a D-Fault.

4.1 Purpose

Establish a guideline that shall be employed by Electrically Competent Qualified Municipal Contractor personnel, meeting OSHA & Con Edison training requirements, when removing conduit from cables and moving Con Edison energized underground cables located outside or inside structures and working in open trenches / excavations that contain a cable with a D-Fault condition.

4.2 Application

Municipal Contractor personnel

4.3 Guideline

This guideline details the requirements for practices that shall be employed when moving Con Edison energized underground cables located inside or outside of Con Edison structures. Only Electrically Competent Qualified Municipal Contractor personnel who have been trained and meet necessary OSHA & Con Edison requirements for moving energized underground cables in accordance with the following directions shall perform movement of energized cables on the Con Edison system.

4.4 Job Briefing

The Electrically Competent Qualified Municipal Contractor in charge shall conduct a documented job briefing with the Municipal Contractor's employees involved before the start of the job. The briefing shall cover: the hazards associated with the job; work procedures involved; special precautions; and personal protective equipment requirements. The Electrically Competent Qualified Municipal Contractor shall instruct that all cables are to be treated as energized. Additional briefings shall be held if significant changes, which might affect the safety of the Municipal Contractor's employees, occur during the course of the work. The Electrically Competent Qualified Municipal Contractor shall document completion of the job briefing. A copy of the documented job briefing shall be available upon request by Con Edison.

4.5 Removal of Conduit from Cables

All subsurface electric cable systems and related components shall be considered energized. Caution shall always be employed whenever conduits are opened to expose the interior cable. Refer to Appendix A for additional requirements and resources.

4.5.1. Pre-cast Concrete Conduit

a- The conduit shall be fractured by striking the top end corner of the conduit with a 3 lb. hammer equipped with a non-conductive handle. When fracturing the conduit, all impact/chipping action shall be performed in such a manner to be directed across the top of the conduit away from any cable that may be inside of the conduit.

b- A small piece of the concrete conduit shall be chipped away so that a visual examination of the interior of the conduit can be made to verify the presence of cable. All impact/chipping actions shall be performed in such a manner to be directed across the top of the duct, away from the cable.

c- If cable is present, concrete-chipping operations shall continue until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g., Norplex Micarta NEMA Grade G-3 or G-10) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operations. The remainder of the conduit shall be fractured using the 3 lb. hammer equipped with a non-conductive handle. Care shall be taken to avoid any impact upon the cable, either by direct or indirect hammer blows.

d- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 4.7, below.

4.5.2 Concrete Encased Conduit

a- The concrete encased conduit (including but not limited to pre-cast, fiber, tile, clay), shall be fractured by striking the top end corner of the conduit with a 3 lb. hammer equipped with a non-conductive handle. When fracturing the conduit, all impact/chipping action shall be performed in such a manner to be directed across the top of the conduit away from any cable that may be inside of the conduit.

b- For concrete encased conduit, it may be necessary to employ a handheld cold chisel (in conjunction with the 3 lb. hammer) to remove concrete encasement. If a chisel is utilized, all impact/chipping actions shall be performed in such a manner to be directed across the top of the duct, away from the cable.

c- If the concrete encasement is so dense as to render the use of a hammer and handheld chisel non-effective, an 8-pound sledgehammer may be employed. If neither of these devices proves effective, the use of a pneumatic chipping hammer will be permitted. The weight/size of the pneumatic chipping hammer shall not exceed 20 lbs. When utilizing a pneumatic chipping hammer, the device shall be securely positioned and be under close operator control at all times. The tool bit used for these operations shall be chisel shaped with a minimum width of two (2") inches. All impact/chipping actions shall be performed in such a manner to be directed across the top of the duct, away from the cable.

e- A small piece of the concrete conduit shall be chipped away to permit verification of the presence of cable inside the conduit.

f- If cable is present, concrete-chipping operations shall continue until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g., Norplex Micarta NEMA Grade G-3 or G-10) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operation.

g- After installation of the shield material has been completed, continue removal of remaining conduit and encasement, using handheld and power tools.

h- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 4.7, below.

4.5.3 Wood Conduit

a- Wooden conduit shall be split using a handheld cold chisel and a 3 lb. hammer equipped with a non-conductive handle. All impact/chipping action shall be performed in such a manner to be directed across the top of the conduit away from the cable.

b- The chisel shall use to create a small window in the conduit that will permit a visual inspection of the conduit interior for the presence of cable.

c- If cable is present, wood conduit material shall continue to be removed until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g., Norplex Micarta NEMA Grade G-3 or G-10) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operation.

d- After installation of the shield material has been completed, continue removal of remaining conduit

e- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 4.7, below.

4.5.4 HDPE Conduit

a- HDPE conduit shall be split using hand tools or a handheld pneumatic rotary cutting tool. All splitting/cutting actions shall be performed in such a manner to be directed across the top of the duct, away from the cable.

b- Pneumatic Rotary Cutting Tool – A pneumatic rotary cutting tool, with a depth guide, shall be used to score an access area in the surface of the conduit. Prior to application of the cutting tool to the surface of the conduit, the depth collar on the pneumatic rotary cutting tool shall be set so that the cutting bit will penetrate approximately ¾ of the wall thickness of the conduit. After the conduit has been cut to the maximum depth allowable (such that the bit does not fully penetrate the thickness of the conduit), a 3 lb. hammer shall be used to knock out the access area (window) outlined by the cutting tool. This will permit visual inspection of the conduit interior for the presence of cable.

c- If inspection of the interior of the conduit reveals that cable is present, a non-conductive protective shield barrier shall be inserted into the conduit between the conduit and cable. This shield material shall provide protection for the cable during the remaining conduit removal operations. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g., Norplex Micarta NEMA Grade G-3 or G-10) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operations.

d- If inspection of the conduit interior does not reveal the presence of cable, the remaining conduit may be removed using the tool choices mentioned in 4.5.4.a.

4.5.5 Metal Conduit

a. When removing metal conduit, the Municipal Contractor shall first excavate and expose a collar connecting two sections of conduit. Once the collar is accessible, split and/or cut the collar off with a cutting tool that has a depth guide to inspect the conduit interior for the presence of cable. If a metal conduit collar is NOT easily accessible or found within 20 to 40 feet of open excavation, proceed to section 4.5.5.b. Note: If the work to be performed is in response to a suspected natural gas leak or in the presence of natural gas, only the use of non-powered hand tools is allowed. If work is required in the presence of a natural gas leak, further guidance will be provided by the PI Representative in consultation with Con Edison's Gas Engineering Department

b. If a collar connecting two sections of conduit cannot be found, metal conduit will be split using hand tools and/or a handheld rotary cutting tool. All splitting actions will be directed across the top of the conduit, away from the cable. Note: If the work to be performed is in response to a suspected natural gas leak or in the presence of natural gas, only the use of non-powered hand tools is allowed. Further guidance will be provided by Gas Engineering.

c. Score the outline of an access area onto the surface of the conduit. Do not fully penetrate the conduit with the tool while making this outline.

d. Use this outline as a guide for further splitting and cutting operations that will eventually create a viewing window into the conduit.

e. If inspection of the conduit interior reveals the presence of cable, insert a non-conductive protective barrier between the cable and conduit wall. The barrier will provide physical protection for the cable during remaining conduit removal operations. Materials including, but not limited to, exterior grade plywood, lumber, and Norplex Micarta are acceptable. After the installation of the non-conductive protective barrier, the removal of the remaining conduit may proceed using the tool choices mentioned in section 4.5.5.b.

f. If inspection of the conduit interior does not reveal the presence of cable, the remaining conduit may be removed using the tool choices mentioned in section 4.5.5.b.

4.6 Visual Inspection

a- A visual inspection of cables located outside Con Edison structures that will be moved, shall be performed by Electrically Competent Qualified Municipal Contractor personnel or the authorized Con Edison Inspector.

b- After the conduits have been broken out (removed from the cables), the exposed cable(s) shall be inspected by the Electrically Competent Qualified Municipal Contractor personnel.

c- The cables shall be visually inspected by the Electrically Competent Qualified Municipal Contractor personnel and determined to be free from any of the defects that would prevent relocation. Cable(s) shall be free of cracks, tears, and evidence of oil stains, swelling, or melting of the insulation. Cables shall not have any exposed conductor.

4.7 Cable Moving Operations

a- Municipal Contractor personal shall not move any cables or splices within an electrical manhole. Moving cables within an electrical manhole and splices regardless of location may only be performed by qualified Con Edison electrical personnel unless the Municipal Contractor personnel has completed applicable Con Edison training courses and has provided written proof of said training to the PI Representative. Whenever cables located in open excavations are moved, the Municipal Contractor shall protect the cables by ensuring the cable jacketing is not subjected to sharp edges or over bending as it exits the existing structure or the footprint of the existing structure if said structure has been demolished or is in the process of being demolished and/or rebuilt.

b- Prior to moving any cables outside of a subsurface structure, the cables located within the associated connecting subsurface structures shall be inspected in accordance with Section 3.4 of this guideline.

c- Municipal Contractor personnel meeting the training requirements and experienced in moving Con Edison cables only shall move cables.

d- Cables shall not be moved until plastic “fair-leaders” are positioned at the duct edges to prevent chaffing damage.

e- Synthetic web slings having a minimum width of two (2) inches shall support cables that have been removed from conduit. Slings shall be used in a basket hitch configuration.

f- Conduit which house cables shall be supported using slings, cable, or rope. Conduits shall be supported in such manner as to maintain alignment with one another.

g- Maximum distance between support points shall be four (4) feet.

h- To prevent inadvertent over bending of the cables, the maximum vertical or horizontal offset between supports shall be one foot (1’) for cable that is supported outside of conduit. For cable that is being moved while still installed in conduit, the conduit shall not be offset more than one foot per four-foot section of conduit.

i- Each set of cables (cables from one duct/conduit) shall be moved individually. Cables from multiple ducts/conduits shall not be moved as a bundle.

j- Relocation of cables shall always be performed in a careful manner with the movement of cable under complete control. There shall be no sudden movements of the cable or the conduit that contains cable.

k- An observer shall be positioned to determine proper slack in structures and to ensure that joints remain properly supported on rack arms and specified offsets are maintained. This observation shall be performed from outside of the structure while the cable is being moved.

l- Allowable horizontal and vertical offsets shall be determined based on applicable CET or JB item sketches and/or as directed by the authorized Con Edison Inspector.

m- Cables shall not be permitted to fall freely from temporary supports.

n- All cables supported by slings shall be visually inspected by the ECQMC personnel at the beginning and end of each work shift to ensure that no cracks, leaks, or other defects have developed.

o- Cables shall be repositioned with care when being moved into their final position for the installation of split conduit.

4.8 Working in Open Trenches/Excavations that Contain an Energized a D-Fault

4.8.1 A D-Fault is defined as an abnormal condition found on an energized primary cable or splice that is presumed to be an indication of an impending fault. If the ECQMC personnel notices an abnormal condition on cable in a trench or excavation work must stop and the PI Representative shall be notified immediately to provide further guidance. If the PI Representative in consultation with qualified Con Edison electrical personnel deem the cable condition a D-Fault, the ECQMC personnel shall follow the directions noted below to continue work.

4.8.2 At distances greater than 20 feet from the energized D-Fault, no additional personal Protective Equipment (PPE) other than that referenced in Section 3.9 is required.

4.8.3 At distances greater than 10 feet but less than 20 feet from the D-Fault, a hard-hat mounted face shield is required in addition to PPE referenced in Section 3.9 above.

4.8.4 At distances greater than eight feet but less than 10 feet from the energized D-Fault, a hard-hat mounted full-face shield and a FR Hood in required in addition to PPE referenced in Section 3.9 above.

4.8.5 At distances less than eight feet from the D-Fault, no work shall be performed.

4.8.6 Movement of D-Faulted cable is strictly prohibited.

4.9 Personal Protective Equipment

Municipal Contractor personnel moving Con Edison energized cables shall refer to and comply with applicable OSHA requirements regarding the use of Personal Protective Equipment when performing this work. See Section 3.9 for Matrix on Con Edison's Personal Protective Equipment Guideline.

5.0 Sub-Surface Structure Break Out/Rebuild or Breaking Out a Point of Entry (POE's) in an Electrical Enclosed Space

The ECQMC must be present onsite with the municipal contractor crew to conduct the documented job briefing on each day any breakout operations are to be performed. This includes structure entry for POE, structure break out and/or rebuilds. The ECQMC shall address hazards, live cables, necessary PPE with other municipal contractor employees & request assistance from the PI Representative to arrange any required inspections with qualified Con Edison electrical personnel for any cable movement or adjustments. The ECQMC should refer to section 3.0 through 3.10 & section 4.7 of this procedure for all activities required prior to sub-surface structure entry and cable moving operations respectively. A copy of the documented job briefing shall be available upon request by Con Edison.

5.1 Activities Prior to Sub-Surface Structure Break Out, Rebuild or Creating POE's

5.1.1 Prior to the start of breakout operations, the location of all conduit and cable passing through the section of the wall and beneath the structure floor that is going to be broken out shall be visually identified inside and outside the structure.

5.1.2 When there is a potential for contact between the existing cables that have been visually identified and the tool being used to break the structure, the ECQMC shall discuss with the Public Improvement Representative if there is a possibility that Electric Operations can de-energize the cables that are in the potential zone of contact prior to breaking out the structure.

5.1.3 When the cables cannot be de-energized by Electric Operations then they must be protected by using acceptable non-conductive materials as noted in Section 5.2.

5.1.4 After cables have been protected, they shall be moved by qualified Con Edison electrical personnel or an ECQMC who has met the requirement of Section 4.7 above.

5.1.5 All primary cables shall be moved by or under the direct supervision of qualified Con Edison electrical personnel.

5.2 Structure or POE Break Out Operations

5.2.1 Using caution, expose the exterior sections for the structure that is required to be broken out typically done in 2' – deep vertical sections) by carefully excavating on the outside of the structure. If conduit has been identified to be passing under the structure, take necessary precautions noted below.

5.2.2 Visually identify all conduits and cables passing through the structure and beneath the structure floor as well.

5.2.3 When there is a potential for contact between the existing cables that have been visually identified and the tool being used to break out the structure walls, roof floor and/or POE, protect the cables using fire rated (FR) wood, phenolic board, cable shields or other acceptable non-conductive materials., Cables on the walls in the POE area shall also be protected from falling debris using FR wood even if there is no potential for contact with said cables and the tool being utilized to break the structure.

5.2.4 Once all conduits and cables have been identified and protected on both the inside and the outside of the structure walls and beneath

the structure floor; and the structural integrity of the proposed break out area has been confirmed using hand tools, use the appropriate tool (up to and including a 90-pound jackhammer) to break out the section of structure wall, roof or floor that was previously prepared for break out

5.2.5 If a jackhammer is being used for the structure wall, roof, floor or POE breakout operation, where feasible, support the tool from underneath to prevent slippage.

5.2.6 Where possible, the use of a 90 lb. jackhammer shall be avoided within 8" of a live conduit. If the ECQMC's competent person determines that the breakout can only be made using a jackhammer within 8" of live conduit, a physical barrier must be placed between the jackhammer and all facilities that could possibly come in contact with the jackhammer. The Municipal Contractor may then begin utilizing the 90 lb. jackhammer using a 3" bit or wider.

5.2.7 After the top sections of roof or wall has been broken out, continue to excavate down to expose the next section of that wall to be broken out and repeat the process starting with section 5.2.1

5.2.8 For all additional walls in the structure that need to be broken out, resume operation starting with section 5.1 of this procedure.

APPENDIX – A – Breaking Out Conduit Checklist, On-the-Job Training (OJT) & Video

Breaking-Out Conduit Pre-Job Checklist

Contractor	
Location	
Date and Time	

A new Breaking-Out Conduit Pre-Job Checklist must be completed by the Foreperson each time individuals enter or change roles, and each time a Job Briefing is administered.

Roles Review	*Name(s) of Individuals who will remain continuously on-site throughout this task's progress*	*Training in Compliance and Qualified for task?*	*Lead Person's Initials*	
			Con Edison	*Contractor*
Foreperson		Yes / No		
Individual Completing On-site Peer Check		Yes / No		
Laborer(s) performing break-out		Yes / No		
Con Edison On-Site Representative		Yes / No		

Layout and Activity Review	
Layout #	
Duct(s) in Trench/Manhole	
Duct Type (CD, CED, HDPE, Metal)	
Are there Primary / Secondary electric lines? - What is energized? At what voltages?	
Are duct banks clear of all debris?	
Is there line of sight and all edges and corners?	
Will cable be moved? If so, to where and how will it be supported?	
How will bodies and tools be positioned?	

Personal Protective Equipment	
☐ Safety Boots	☐ 0 kV Gloves (Test Date on gloves: _____)
☐ Hard Hat	☐ Leather Gauntlets
☐ Safety Glasses	☐ Is a Harness Required? (EO-10130)
☐ Face Shield	☐ FR Hood and Goggles (if Primary in structure)
☐ Flame Retardant Coveralls	

Tools - *All tools to be laid out in work area prior to start of activity*	
☐ Claw Hammer	☐ Chipping Gun, must be less than 20 lbs. - Recommended 2"-4" piston stroke and < 1,500 BPM
☐ Chisel with at least 2" wide flat bit	
☐ 3 lbs. Hammer	☐ Micarta or similarly approved half-moon material
☐ 8 lbs. Sledgehammer	☐ Pneumatic Rotary Cutting Tool and Blade (HDPE pipe)

DOJT –OJT0070
PROCEDURE FOR REMOVING CONDUIT FROM UNDERGROUND DISTRIBUTION CABLE

1

conEdison

PROCEDURE FOR REMOVING CONDUIT FROM UNDERGROUND DISTRIBUTION CABLE

- Underground electric cables are protected by conduit pipes which are buried under the roadway in the ground. The conduit protects the high voltage cables placed inside them from damage from shovels, digging bars and other work activities when excavating in the area to install new equipment. Even when using these manual devices to unearth existing ducts, extreme care must be taken not to pierce, cut, or break open the duct unless the safeguards listed in the following pages are used for your safety and the protection of the cables on the inside.
- A mechanical machine such as a backhoe should never be used to excavate around electric or gas facilities. The likelihood of the facility being damaged increases significantly when such practices are used.

conEdison

GETTING PREPARED TO LOCATE DUCTS

- Before removing asphalt and concrete roadbase make sure a code 753 has been called in with the 811 center and spray marks are in place on the ground showing the path of the electric and gas lines.
- Check the spray painted mark outs against the Con Edison plates and prints. (Layout diagram, Conduit plate, Composite Feeder Plate, Low Tension mains & service and Gas Mains & Service Plate). Ask your Con Edison Representative to review these prints and the markouts with you.
- Remove concrete and asphalt within your new work zone with machine. Load out debris.
- Use a backhoe only to dig up areas where you have verified that there are no electric or gas facilities.

3

conEdison

DIGGING IN AREAS WHERE YOU HAVE ELECTRIC, GAS FACILITIES, OR HAVE DISCREPANCIES BETWEEN THE MARKOUTS AND PRINTS

- Dig only using shovels and blunt edge digging bars to find electric and gas facilities. Never strike a blunt edged digging bar straight down into the soil. Precast, HDPE, Cast Iron & plastic gas mains/services can lie a few inches under the surface and the bar can still penetrate through them if you are not careful.
- When using a digging bar on hard, compacted soil, use a sideways striking motion toward the sides of the excavation, never straight down.
- Continuously remove soil from area, keep area clean of debris, locate ducts edge to edge to keep line of sight.
- Use air lance to blow out tight areas between facilities to visualize work zone.

4

conEdison

PRE-JOB CHECKLIST

- All tools to be laid out in work area prior to start of activity

5

conEdison

PREPARE AREA FOR DUCT BREAK OUT

- Additional guidance for routine entry into electrical enclosed space is provided in GEHSI-S17.01 – Electrical Enclosed Space Entry.
- Once you have dug down and located duct banks make sure you clear all debris (soil, rocks) from the trench to visually have a line of site of all edges and corners.
- Determine if you need to remove the duct/s from the electrical conduit to move them to make room for the installation of additional new facilities. (WINGBACK).
- <u>If necessary to conduct a removal:</u> Address the PPE Requirements, work procedures and tools to be used on the following pages with the workers. Stress the importance of following procedures to avoid a high hazard injury such as shock or burns. Document in your safety briefing.

6

conEdison

PPE REQUIREMENTS DURING DUCT BREAKOUT IN A TRENCH OR ENCLOSED SPACE

NOTE: ONLY COTTON WORK CLOTHS UNDERNEATH FR SUITS

You must wear an FR coverall during all duct break out procedures. Remove jewelry (chains, watches, rings, earrings)

FR Coverall

You must wear Class 0 kV gloves, leather gauntlet leather protectors, helmet, safety glasses and face shield

Class 0 kV Gloves, Gauntlets, Safety Glasses, Face Shield, Helmet.

7

conEdison

PPE REQUIREMENTS DURING DUCT BREAKOUT IN AN ELECTRICAL ENCLOSED SPACE

NOTE: ONLY COTTON WORK CLOTHS UNDERNEATH FR SUITS

You must wear an FR coverall and rescue harness during all duct break out procedures inside the EES. Remove jewelry (chains, watches, rings, earrings)

FR Coverall & Rescue Harness

You must wear Class 0 kV gloves, leather gauntlet leather protectors, helmet, safety glasses and face shield

Class 0 kV Gloves, Gauntlets, Safety Glasses, Face Shield, Helmet.

8

conEdison

EQUIPMENT / TOOLS NEEDED FOR BREAKING OUT DUCTS

Precast Concrete Conduit

Only use small hammer to strike duct edges.

Insert Micarta to protect cable, keep striking away from center.

Slide Micarta along as you break off desired length of duct

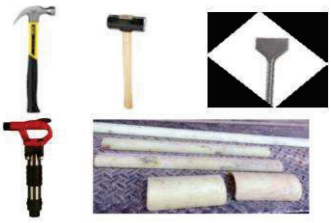
Concrete Encased Duct

When breaking out concrete encased ducts the only tools to be used are: hammer, 3 lb. hammer With wood/plastic handle, chisel with 1.5" head, 8 lb. Sledgehammer by striking duct edges.

<u>If concrete is not breaking</u> with these tools, a 20 lb. chipping gun with a 1.5" head can be used.

Make a window in the Duct, slide in a Micarta board and continue breaking out the remaining duct.

See sequence on next page:



9

conEdison

CONCRETE ENCASED DUCT BREAKOUT SEQUENCE

Use a 3 lb. hammer striking edges.

Advance to hammer & chisel with 1.5" head

If this is still not working, go to #2

1

Use 8 lb. sledgehammer striking Edges, not center.

If this is still not working, go to #3

2

Use a **<u>lightweight Chipping gun</u>** with a 2 to 4" piston stroke with a **<u>1.5" head</u>** breaking toward edges, never straight down.

NEVER USE A JACKHAMMER, A RIVET BUSTER CHIPPING GUN, OR A BIT IN THE CHIPPING GUN LESS THAN A 1.5" HEAD. If this is still not working, go to #4

3

Visualize work zone when breaking away Material. Keep work zone clean. Remember That electrical ducts are usually stacked in Multiple rows and levels.

4

10

conEdison

BREAKING OUT INTERIORS OF CONCRETE/CLAY DUCTS

Find edges & visualize all ducts. Remember that There could be several across and underneath. Keep area clean, so you can tell configuration.

5

Break out window on each top duct found. Strike Away From the center.

6

Insert Micarta "half moon" protective insert in windows on ducts, Continue breaking top rows of ducts in a horizontal direction sliding Protective Micara down the run while breaking the top & sides.

7

11

conEdison

HDPE (PLASTIC) CONDUIT & STEEL DUCTS

Tools Needed

PPE Needed

3 pd. Hammer, 2" chisel, Rotary Cutting Tool & Blade, Micarta protective "half moon"

FR Coverall, Class 0 kV Gloves, leather gauntlets, safety glasses, face shield and helmet

12

conEdison

MAKING A WINDOW IN HDPE

Visualize top of duct bank, remove excess concrete chips & dirt.

Have line of site for sections to be removed

1

Use a rotary cutting tool to score a window In the HDPE pipe top.

Do procedure slowly and carefully.

Only score 90% of the way through the conduit.

2

Use hammer & chisel to cut away remaining plastic.

Strike away from center toward sides.
Never strike straight down.

3

Insert Micarta "half moon" protection board.

Slide horizontally into conduit. Continue to cut open the top of conduit to desired length, Moving the Micarta as you go.

Do each duct individually,

Do not lose your line of sight.

4

13

conEdison

MAKING A WINDOW IN METAL CONDUIT

Visualize top of duct bank, remove excess concrete chips & dirt.

Have line of site for sections to be removed

1

If you find a coupling connecting two Sections of metal duct, slide collar over, or cut off.

There may be a large enough section underneath to insert Micarta protection board for conduit removal.

2

Use a rotary cutting tool to score a window In the steel conduit pipe top.

Do procedure slowly and carefully.
Only score through 90% of steel conduit.

Use chisel and hammer to break away the rest striking away from center toward the corners

3

Insert Micarta "half moon" protection board. Slide horizontally into conduit. Continue to cut open top of conduit to desired length, moving Micarta as you go.

Do each duct individually,
Do not lose your line of sight.

Appendix B – PI Check Point Tasks

Public Improvement (PI) - Check Point Tasks

A PI Check Point Task is defined as a construction activity involving Con Edison facilities that warrant a briefing or discussion with the PI Representative and the Municipal Contractor. This briefing should be documented by the Municipal Contractor in accordance with the applicable sections of the PI Guideline (CONST-029) and OSHA.

Work Category	Task
Demolish Manhole (MH)	Inspect MH
	Build False Roof
	Remove Forms
	Demolish Walls
	Demolish MH Floor
Build MH	Install Forms
	Remove Forms
Wingback	Inspect Site
	Break Out Conduits / Duct Systems
Excavation	Reivew Mark-Outs
	Excavate
Backfill	Backfill Facilities
Roadway Restoration	Mill, Pave and/or Reconstruct Roadway
Electric Pipe Install	Install Conduit or Duct Systems
Structure POE's	Inspect MH or Service Box (SB)
	Move Cable(s)
MH or Service Box (SB) Regrade	Inspect MH or SB

Section 1
Introduction

1.1 Overview

This Supplemental Pre-Design Investigation (SPDI) Report presents results of the environmental sampling conducted in conjunction with the geotechnical investigation conducted by Mueser Rutledge Consulting Engineers (MRCE) along the proposed force main alignment related to the construction of a 4-million-gallon (MG) combined sewer overflow (CSO) facility for the CSO outfall Owls Head OH-007 in Brooklyn, New York and in select locations elsewhere on the OH-007 site to fill data gaps in areas that could not be accessed during the original PDI. The site, referred to as OH-007, is located adjacent to the CSO Outfall between Second Avenue and Fifth Street, and is immediately adjacent to the east side of the Gowanus Canal. The proposed force main alignment originates at the OH-007 CSO tank site, extends south along 2nd Avenue to 8th Street, then turns east along 8th Street, terminating at the intersection of 8th Street and 3rd Avenue (See Figure 1).

Construction of the conveyance piping will require excavation in urban fill material and in some cases natural material along the proposed alignment. The area is heavily industrial and the footprint of the excavation area for the force main may encounter potential contamination.

1.2 Objectives

The specific objectives of the environmental sampling implemented during the geotechnical investigation along the force main alignment were:

1. Document any subsurface contamination encountered by the geotechnical borings along the proposed force main alignment.
2. Screen soil for evidence of contamination including staining, sheens, nonaqueous phase liquid (NAPL), odors, and elevated photo ionization detector (PID) readings.
3. Measure contaminant concentrations in soil so that provisions for proper handling, treatment, and disposal or reuse can be included in the design documents.
4. Compare chemical analytical results with regulatory criteria to support the management of contaminated media and ensuring health and safety during construction.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

Section 2
Site Background

The area surrounding the Gowanus Canal, originally the natural water body known as the Gowanus Creek, was settled in the 1600s for farming and fishing. The Gowanus Canal was constructed on the Gowanus Creek between 1853 and 1869. The canal was used for transport of materials, including coal, lumber, petroleum, and asphalt to industries that were developed along the canal. Industries in the area included manufactured gas plants (MGPs), coal yards, cement makers, lumber yards, metal and woodworking operations, tanneries, paint and ink factories, chemical plants, oil refineries, and a variety of other industries.

2.1 Potential Contamination

Much of the proposed force main alignment corridors are in areas that has been and continue to be heavily industrialized. A Phase I Environmental Site Assessment (ESA) was conducted by Hazen and Sawyer/Brown and Caldwell, a Joint Venture (HSBC) in 2022. The Phase I ESA of the Site (HSBC, 2022) identified several historical and present-day industrial uses that potentially released hazardous substances or petroleum products into soils and groundwater. Below is a summary of sites that could potentially impact subsurface soil in the area of the proposed force main alignment.

Leaking UST and Free Phase Petroleum Product. The Site consists of Block 990 Lots 1 and 16 and the owner entered the two parcels in New York State Department of Environmental Conservation's (DEC) Brownfield Cleanup Program (BCP) in 2015. The BCP application describes a subsurface investigation conducted by the applicant to investigate potential impacts associated with an underground storage tank (UST) on one of the parcels. The investigation included a geophysical survey to locate the UST, and soil borings to evaluate soil quality in the vicinity of the tank. The geophysical survey identified an anomaly consistent with a UST, which was located adjacent to a fill port with a "fuel oil" cap and a vent pipe on the sidewalk in front of the building along 2nd Avenue. Free phase petroleum product, a light non-aqueous phase liquid (LNAPL), was observed in two soil borings. The BCP application also states that five petroleum spills were reported on the Site between 1994 and 2015. One spill, reporting gross soil contamination and free-phase petroleum-like material in soils, is currently open. Constituent of Concern (COCs) associated with leaking UST and petroleum include:

- Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX)
- Naphthalene
- Polycyclic aromatic hydrocarbons (PAHs)

Manufacturing Gas Plant. The former Citizens MGP is located directly across the Gowanus Canal from the Site to the west. It operated for approximately 100 years from the 1860s through the early 1960s. The 2017 PDI conducted on the New York State Department of Sanitation (DSNY) property documented the presence of MGP dense non-aqueous phase liquid (DNAPL) at several boring locations across the property. In addition, MGP DNAPL was also identified during the Phase II investigation activities in the privately owned parcel south of 5th Street. This DNAPL likely migrated within deeper strata (below the Gowanus Canal) from the Citizens MGP to locations on the DSNY property and south of 5th Street. In addition, MGP DNAPL migrated into one of the newly installed monitoring wells and accumulated in the 2-foot sump of the monitoring well two weeks after installation. The mobility of the DNAPL indicates a potential for impacts beyond the DSNY property, including areas to the south (i.e., the Site). COCs associated with MGP DNAPLs include:

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

- BTEX
- Naphthalene
- PAHs

Marine Fuel Terminal. Historical aerial photographs and Sanborn fire insurance maps (Appendix A) indicate a large marine fuel terminal operated on the south shore of the 6th Street Turning basin from at least 1961 to 1991. The 1969 Sanborn map indicates the combined capacity of the terminal's above ground and underground storage tanks was in excess of 845,000 gallons. The current regulatory programs for permitting, spill control, and spill reporting that govern a major oil storage facility (MOSF) did not exist in the 1960s. Therefore, it is not uncommon for older marine terminals to have large volumes of residual and mobile product remaining in the zone of water table fluctuation. Although product spills from storage tanks and barge unloading operations might have been partially isolated from the Site by the intervening turning basin, substantial releases to the basin could have permeated the Site's bulkheads and impacted the soils beneath the existing buildings and parking area. Product may also have migrated on the water table directly to the Site near 2nd Avenue. COCs associated with fuel oils and older gasolines include:

- BTEX
- Methyl tert-butyl ether (MTBE)
- Lead
- Naphthalene
- PAHs

Upgradient Database Listings. The EDR search identified 531 listings within the minimum search distances from the Site (0.25 to 1 mile). In the Phase I ESA, a total of 23 upgradient listings were judged to be close enough to potentially impact Site soil and groundwater. One listing had a spill of No. 2 Fuel oil in 2004 with no record of a cleanup. A second site had a spill of waste oil in 2004 when the New York City Fire Department (FDNY) responded to a fire. Waste oil may contain solvents, polychlorinated biphenyls (PCBs), and heavy metals in addition to ordinary petroleum constituents. No details of a purported cleanup were provided. COCs associated with these spills include:

- BTEX
- Naphthalene
- PAHs
- Solvents
- PCBs
- Heavy metals

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

Section 3

Supplemental Pre-Design Investigation Scope of Work

The environmental sampling related to the OH-007 SPDI scope of work was implemented to characterize soil contamination along the anticipated force main alignment for the CSO retention tank and select locations elsewhere at the OH-007 site so that provisions for proper handling, treatment, and disposal or reuse can be established and included in the design documents for construction of the CSO facility.

HSBC collaborated with MRCE to collect the soil samples necessary for this SPDI during their geotechnical investigation of the force main alignment. The scope of work cited below describes MRCE's geotechnical investigation in accordance with the following workplan.

- "Draft Geotechnical Investigation Work Plan, CSO-GC-SFS-DES OH, Gowanus Canal CSO Tank OH-007 Site", prepared by Mueser Rutledge Consulting Engineers (MRCE), dated March 24, 2022.

SPDI activities were also conducted in accordance with the following documents:

- "Health and Safety Plan for Gowanus Canal Tank Siting and Superfund Support, CSO-GC-SFS-DEC, Brooklyn, New York" prepared by the Hazen/BC project team (November 2016).

3.1 Scope of Work – Implemented

Table 1 provides a summary of the soil borings drilled during the SPDI field activities and includes specifics on depth of drilling and sampling, analytical sample intervals, and other details for each location.

Field activities were implemented in accordance with the Geotechnical Investigation Work Plan for the OH-007 Site prepared by MRCE as cited above. The scope of field activities conducted during the geotechnical investigation included the following:

- Drilled and collected soil samples from 17 soil borings (MR-101, MR-102, MR-105, MR-201 through MR-210, and MR-301 through MR-304.
- Visual observations to identify contamination such as petroleum, coal tar, and other contamination or waste
- Laboratory analyses of soil samples to quantify contaminant concentrations and for waste characterization considerations.

The methods and procedures for the field investigation activities are described below.

3.2 Soil Investigation

Drilling services during the field activities were provided by Craig Geotechnical Drilling Co., Inc. (CRAIG). A total of 17 borings were drilled and sampled as part of the geotechnical investigation. Thirteen of the 17 borings were drilled and sampled along or in the vicinity of the force main alignment and the locations are shown in Figure 1. Borings were advanced using mud rotary drilling equipment. The initial 5 to 6 feet of each boring location were advanced by hand auger to verify that subsurface utilities were not present. Standard Penetration Testing (SPT) was conducted in accordance with American Society for Testing and Materials (ASTM) D1586. SPT sampling was conducted continuously from 6 feet (ft) to

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

12 ft below ground surface (bgs). Below 12 ft, SPT samples were generally conducted at 5-ft intervals to a depth of 100 ft bgs, and in 10-ft intervals thereafter. Undisturbed samples of cohesive soils were collected at each boring location in accordance with ASTM D1587. Soils extracted from these borings were visually examined, characterized, logged, and screened in the field for organic vapors using a photoionization detector (PID). Soil descriptions were documented for physical properties such as color, sorting, layering, etc. The grain size distribution of soils was visually characterized in the field and logged in accordance with the Burmister Soil Classification System (1959). The Burmister classification was then also converted to the Unified Soil Classification System (USCS) for preparation of the final boring logs (see Appendix B). The field team recorded observations, prepared logs, and collected soil samples for laboratory analyses during the drilling and sampling of all borings.

At a minimum, one sample was collected from each of the stratigraphic units (fill, meadow mat, and underlying glacial deposits) encountered during drilling. The sampling was biased to the interval with the greatest observed impacts within each stratigraphic unit or 1-ft interval directly above the base of a stratigraphic unit, if no impacts were observed. If no impacts were observed in the glacial sand, a sample was collected directly above the target total depth of that boring. Each soil sample collected was analyzed for the following parameters:

- Volatile organic compounds (VOC) by United States Environmental Protection Agency (EPA) Method 8260B including methyl tert-butyl ether (MTBE)
- Semi-volatile organic compounds (SVOC) by EPA Method 8270C including naphthalene
- PCBs by EPA Method 8082
- Pesticides by EPA Method 8081
- Herbicides by EPA Method 8151A
- Target Analyte List (TAL) metals by EPA Method 6000/7000 series
- Total Cyanide and free cyanide by EPA Method 9010B

In addition, samples were analyzed for the following waste characterization parameters to evaluate disposal and treatment options for excavated soil during the construction of the CSO facility:

- Total Organic Halides
- Ignitability
- Corrosivity
- Reactivity
- Toxicity Characteristic Leaching Procedure (TCLP) constituents including VOCs, SVOCs, metals, pesticides, and herbicides

Soil samples from the environmental sampling were provided to Aqua Pro-Tech Laboratories [New York State Department of Health (DOH) #11634]. Aqua Pro-Tech laboratories is certified to conduct the analyses listed above, under the DOH Environmental Laboratory Approval Program (ELAP).

Details on the total depths drilled, sample intervals, and analysis at each soil boring are provided in Table 1. Boring logs are provided in Appendix B. Soil investigation locations are shown on Figure 1.

3.3 Data Usability

Data validation was performed on the analytical data packages received from Aqua Pro-Tech Laboratories. Data Usability Summary Reports (DUSRs) are provided in Appendix C. Data were reviewed in accordance with the EPA National Functional Guidelines (NFGs) listed in the DUSRs and appropriate method-specific EPA Region II Data Validation Standard Operating Procedures (SOPs). The following items/criteria were reviewed:

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

- Data completeness
- Chain of custody
- Holding times and sample preservation
- Field duplicate accuracy
- Internal standard area and retention time (RT)
- Surrogates
- Laboratory control sample (LCS) recoveries
- Matrix spike and matrix spike duplicate samples
- Method and field blank contamination
- Laboratory duplicate samples
- Serial dilution
- Initial and continuing calibration summaries
- Compound quantitation
- Reporting limits
- Sample comments and quality control summaries

Overall, the analytical data collected during the geotechnical investigation were found to be acceptable for the intended purposes. As discussed in detail in the DUSRs for some data packages, minor analytical issues were found with the following data quality indicators resulting in qualified (e.g., estimated, J) results:

- Initial calibration verification
- Continuing calibration
- Matrix spike samples
- Laboratory control samples
- Laboratory duplicates
- Surrogates

All analytical results in this SPDI Report reflect the data qualifiers assigned during the data validation process.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

Section 4

Summary of Findings

This section of the SPDI Report summarizes the geology and hydrogeology encountered along the force main alignment and presents soil quality and waste characterization data pertinent to excavation, soil management, treatment, and disposal or reuse activities.

Soil results from the environmental investigation were compared to the following:

- Restricted Use Soil Cleanup Objectives (SCOs) for Protection of Groundwater (PGW) SCOs identified in Table 6.8(b) of 6 NYCRR Part 375-6.8(b) (denoted as 375GW in the figures)
- Restricted Use SCOs for Protection of Public Health: Residential identified in Table 6.8(b) of Chapter 6 New York Codes, Rules, Regulations (6 NYCRR) Part 375-6.8(b), (375R)
- Restricted Use SCOs for Protection of Public Health: Commercial identified in Table 6.8(b) of 6 NYCRR Part 375-6.8(b) (375C)
- Restricted Use SCOs for Protection of Public Health: Industrial identified in Table 6.8(b) of 6 NYCRR Part 375-6.8(b) (375I)
- Supplemental Soil Cleanup Objectives (SSCOs) from Table 1 of Commissioner's Policy 51 (CP-51) Soil Cleanup Guidance; DEC Division of Environmental Remediation; October 21, 2010, where applicable

Data included in this SPDI Report can be used in developing excavation plans and quantity take-offs of the categories of soil and material to be treated and disposed or reused. It is anticipated that soil management categories may include:

- Soil/material requiring landfill disposal
- Soil/material eligible for beneficial reuse (e.g., landfill daily cover or other uses) with or without treatment (e.g., thermal treatment, soil washing, stabilization/solidification)

These data and estimates can inform the design such that appropriate provisions can be made for on site soil staging and treatment processes, which is particularly important given space limitations. This information will be incorporated into the design documents for Construction Package 3 (CP-3) which includes completion of the CSO facility and the force main.

4.1 Site-Specific Stratigraphy

The subsurface stratigraphic units encountered in borings along the force main alignment include the following: Fill, Organic Silty Clay (meadow mat or O layer), Silty Clay with fine to medium sand (C layer), and glacial sands. Further details on these stratigraphic units are provided in the Phase 2 Geotechnical Data Report. OH-7 Gowanus Canal CSO Tanks NYCDEP Contract CP3 (MRCE, 2026). Based on the stratigraphy encountered at the boring locations, excavations for the force main will predominantly occur in the fill material except for a portion along 8th Street where excavated materials can also include the "O" and "C" layers.

4.2 Contamination Screening

During the SPDI activities, subsurface materials were screened for evidence of contamination. PID readings, staining. Odors, sheen, discoloration, and any other evidence of contamination were

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

recorded in the boring logs (Appendix B). Table 2 summarizes notable PID readings, visual evidence of contamination, and unusual odors.

4.3 Soil Analytical Results

The discussion below will focus on the analytical results from borings MR-201 through MR-210, MR-303, MR-304, and SCPT-111 since these borings were drilled and sampled along the force main alignment. In general, the analytical data collected at locations in the tank area and along 5th Street were consistent with results obtained during previous investigation activities in these areas. Tables 3A through 3F present, respectively, the analytical results for VOCs, SVOCs, metals, PCBs, pesticides, and herbicides.

The following parameters exceeded one or more SCOs:

VOCs. Eight of the thirteen borings listed above had no exceedances for VOCs (see Table 3A for analytical results). Figure 2 depicts the lateral and vertical distribution of the VOC exceedances. Acetone exceeded the PGW SCO at MR-201, MR-202, MR-203, MR-205, and MR-303, while petroleum-related aromatic hydrocarbons, including benzene, ethylbenzene, toluene, xylenes, and 1,2,4-trimethylbenzene, exceeded applicable SCOs in soil samples collected at MR-203and MR-303. The highest VOC concentrations were detected at MR-303 within the 20 to 22 ft bgs sampling interval. At this location, BTEX compounds and 1,2,4-trimethylbenzene exceeded the PGW SCO and SCOs for Residential and Commercial Use. These compounds are all common petroleum-related contaminants and were collected at a depth interval with indications of impacts such as NAPL saturation, sheen and petroleum odors.

Exceedances were generally limited to deeper soil intervals, with the most significant impacts observed between approximately 15 and 35 ft bgs. VOC impacts appeared localized, as no exceedances were reported at borings MR-204, MR-206 through MR-210, MR-304, or SCPT-111. The distribution of VOC detections suggests the presence of discrete subsurface petroleum impacts rather than widespread surficial fill contamination.

SVOCs. Several SVOCs, specifically PAHs, were detected at concentrations above their respective SCOs (see Table 3B for analytical results). Figure 3 depicts the lateral and vertical distribution of the SVOC exceedances. Except for MR-303, PAHs exceedances were generally limited to PGW and Residential SCOs. The most frequently detected compounds above applicable SCOs included benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, indeno(1,2,3-c,d)pyrene, dibenz(a,h)anthracene, and phenanthrene. These exceedances were identified at several borings and seismic cone penetration test (SCPT) locations, including MR-201, MR-202, MR-203, MR-207, MR-303, SCPT-110, and SCPT-111. Naphthalene was also detected above the PGW SCO at MR-303 from the sample interval with indications of impacts such as NAPL saturation, sheen, and petroleum odors.

The detected SVOCs consist predominantly of PAHs, which are common constituents of coal tar, petroleum products, and historic urban fill. The highest concentrations were observed at MR-303 where multiple PAHs exceeded Residential Use SCOs and, in some cases, approached or exceeded Commercial Use SCOs. Elevated PAH concentrations were generally encountered in shallow to intermediate depth intervals. The widespread occurrence of PAHs across the site is consistent with the presence of historic urban fill and legacy industrial impacts commonly encountered within the Gowanus area. No SVOC exceedances were reported at MR-204, MR-205, MR-206, MR-208, MR-209, MR-210, and MR-304.

The exceedances of the SCOs for Protection of Groundwater and Protection of Human Health – Residential Use would disqualify the material for unrestricted use or beneficial use as Fill Types F2 and F3 under 6 NYCRR Part 360.13.

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

Metals. Metals including barium, copper, cyanide, mercury, selenium, and/or zinc were detected at concentrations above one or more SCOs in four of the 13 borings drilled and sampled along or in the vicinity of the force main alignment and all exceedances occurred in samples collected in the fill and/or upper portions of the meadow mat. Elevated lead concentrations (826 mg/kg, 6,940 mg/kg and 461 mg/kg) were detected at borings MR-302, SCPT-101, and SCPT-108; however, these locations are outside the footprint of the proposed force main alignment. The spatial distribution of metals is shown on Figure 4. See Table 3C for analytical results.

The exceedances of the PGW SCOs may disqualify the material for unrestricted use or beneficial use as Fill Type F2 under 6 NYCRR Part 360.13.

Polychlorinated Biphenyls (PCBs). No PCBs were detected above the relevant SCOs in any samples (Table 3D) collected along the force main alignment.

Pesticides and Herbicides. No pesticides or herbicides were detected in any of the soil samples (Table 3E).

4.3.1 Waste Characterization Sampling

A waste characterization sample was collected at each of the soil sample locations and depths to generate data to assist in the identification of disposal options for excavated soils. The samples were submitted for laboratory analysis and results were compared to the Resource Conservation and Recovery Act (RCRA) Hazardous Waste Levels published in 40 CFR Part 261. Tables 4A through 4D provides a summary of waste characterization sample analytical results compared to the RCRA Hazardous Waste Levels.

Based on the analytical results, lead was the only constituent found above the RCRA Hazardous Waste Levels. Lead exceeded the toxicity characteristic level in the sample collected from the fill material at two boring locations. Lead was detected at 5.56 mg/L from the 6.0 to 8.0 ft interval at boring MR-302 and 116 mg/L from the 4.0 to 5.0 ft interval at boring SCPT-101. Both locations are outside the footprint of the proposed force main alignment. However, the results indicate there is potential for some of the fill material to exhibit a hazardous waste characteristic, which will need to be considered in plans for managing the excavated soils during construction.

Use of contents on this sheet is subject to the limitations specified at the end of this document.

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentration above NYS_SUP_PGW is boldfaced
concentrations above NYSPART375C_DEC2025 are outlined
concentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentration above NYS_SUP_PGW is boldfaced
concentrations above NYSPART375C_DEC2025 are outlined
concentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentration above NYS_SUP_PGW is boldfaced
concentrations above NYSPART375C_DEC2025 are outlined
concentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentration above NYS_SUP_PGW is boldfaced
concentrations above NYSPART375C_DEC2025 are outlined
concentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentrations above NYS_SUP_PGW are boldfaced
concentrations above NYS_SUP_RES are shaded gray
concentrations above NYSPART375C_DEC2025 are outlined
cconcentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentrations above NYS_SUP_PGW are boldfaced
concentrations above NYS_SUP_RES are shaded gray
concentrations above NYSPART375C_DEC2025 are outlined
cconcentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentrations above NYS_SUP_PGW are boldfaced
concentrations above NYS_SUP_RES are shaded gray
concentrations above NYSPART375C_DEC2025 are outlined
cconcentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the method detection limit
mg/kg = milligrams per kilogram
concentrations above NYS_SUP_PGW are boldfaced
concentrations above NYS_SUP_RES are shaded gray
concentrations above NYSPART375C_DEC2025 are outlined
cconcentrations above NYSPART375I_DEC2025 are printed in red font
concentrations above NYSPART375PGW_DEC2025 are underlined
concentrations above NYSPART375R_DEC2025 are italicized

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
mg/kg = milligrams per kilogram
< MDL = less than the medthod detection limit

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sam
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verifiec
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be v
mg/kg = milligrams per kilogram
< MDL = less than the medthod detection limit
Concentrations above NYSPART375C_DEC2025 are shaded gray
Concentration above NYSPART375I_DEC2025 is outlined
Concentrations above NYSPART375PGW_DEC2025 are printed in red font
Concentrations above NYSPART375R_DEC2025 are underlined

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sam
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
R = The sample detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verifiec
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be v
mg/kg = milligrams per kilogram
< MDL = less than the medthod detection limit
Concentrations above NYSPART375C_DEC2025 are shaded gray
Concentration above NYSPART375I_DEC2025 is outlined
Concentrations above NYSPART375PGW_DEC2025 are printed in red font
Concentrations above NYSPART375R_DEC2025 are underlined

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the medthod detection limit
mg/kg = milligrams per kilogram

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the medthod detection limit
mg/kg = milligrams per kilogram

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
< MDL = less than the medthod detection limit
mg/kg = milligrams per kilogram

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
mg/L = milligrams per liter
Detections are boldfaced

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
mg/L = milligrams per liter

J = The analyte was positively identified; the associated numerical value
UJ = The analyte was not detected above the sample method detection l
U = The analyte was analyzed for, but was not detected above the samp
UR = The sample non-detection results is rejected due to serious deficie
mg/L = milligrams per liter

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
mg/L = milligrams per liter
Detections are boldfaced
Concentrations above RCRA-BMRC_TCLP are shaded gray

Notes:
J = The analyte was positively identified; the associated numerical value
UJ = The analyte was not detected above the sample method detection l
U = The analyte was analyzed for, but was not detected above the samp
mg/L = milligrams per liter
Detections are boldfaced
Concentrations above RCRA-BMRC_TCLP are shaded gray

Notes:
J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
UJ = The analyte was not detected above the sample method detection limit; and the method detection limit is approximate.
U = The analyte was analyzed for, but was not detected above the sample method detection limit.
UR = The sample non-detection results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.
mg/L = milligrams per liter
Detections are boldfaced

Notes:
J = The analyte was positively identified; the associated numerical value is t
UJ = The analyte was not detected above the sample method detection limit
U = The analyte was analyzed for, but was not detected above the sample m
UR = The sample non-detection results is rejected due to serious deficiencie
mg/L = milligrams per liter
Detections are boldfaced

Notes:
J = The analyte was positively identified; the associated numerical value is t
UJ = The analyte was not detected above the sample method detection limit
U = The analyte was analyzed for, but was not detected above the sample m
UR = The sample non-detection results is rejected due to serious deficiencie
mg/L = milligrams per liter
Detections are boldfaced

Legend

Phase I ESA Findings

- Retort Cylinders
- Oil Tank
- J.W. Masury & Son Dry Color works (1886)
- David E. Kennedy inc. Limestone and Asbestos Warehouse (1950)
  Phoenix Asbestos Disposal (1994)
  Spartan Dismantling (1995-2004)
- Eppinger and Russel Creosote Works (1886 Sanborn)
- Chemical Storage Shed (1904 Sanborn)
- Unidentified Storage Tank
- Potential Area of UST and Free Product Identified In Soil Boring By Langan Engineering in 2015

Lab Data to be provided with Final Report

Use of contents on this sheet is subject to the limitations specified at the end of this document.
SUPPLEMENTAL_PDI_REPORT_OH-007_FINAL

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23F0537
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: August 24, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-301-6.0-8.0-20230612	23F0537-01	6/12/2024	Soil
MR-301-25.0-27.0-20230612	23F0537-02	6/12/2024	Soil

Data validation was performed on the analytical data for two (2) samples collected June 12, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7470A/245.1
Reactive Cyanide	USEPA SW846 9010B
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9040C

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOCs Benzaldehyde and Hexachlorocyclopentadiene were qualified as rejected due to major deviations associated with matrix spike samples and laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibrations, surrogates, and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	MR-301-25.0-27.0-20230612	4-Bromobenzene	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-301-6.0-8.0-20230612 MR-301-25.0-27.0-20230612	Acetone	> CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values except for 1,4-Dichlorobenzene-d4 associated with sample MR-301-25.0-27.0-20230612. Since recoveries were above the control limits and all associated analytes were non-detect, no qualification was required.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-301-6.0-8.0-20230612	Acetone 2-Butanone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MR-301-25.0-27.0-20230612	1,1-Dichloroethene 2-Butanone 2-Hexanone 4-Methyl-2-pentanone Acetone Chloroethane Chloromethane Dichlorodifluoromethane trans-1,2-Dichloroethene trans-1,3-Dichloropropene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Octadecanoic acid, butyl ester. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	MR-301-25.0-27.0-20230612	2,4,6-Tribromophenol	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-301-6.0-8.0-20230612 MR-301-25.0-27.0-20230612	Benzaldehyde Hexachlorocyclopentadiene	10% > %R < CL	J (detects) R (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-301-6.0-8.0-20230612	2,3,4,6-Tetrachlorophenol 2,4,6-Trichlorophenol 2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol 4-Nitroaniline Benzo(g,h,i)perylene Caprolactam Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MR-301-25.0-27.0-20230612	2,3,4,6-Tetrachlorophenol 2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline 4,6-Dinitro-2-methylphenol 4-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MR-301-25.0-27.0-20230612	TCMX DCB	%R > CL	J (detects) No Action (non-detects)	3H
8151A	MR-301-6.0-8.0-20230612 MR-301-25.0-27.0-20230612	DCAA	10% < %R < CL	J (detects) UJ (non-detects)	3L
8081B	MR-301-25.0-27.0-20230612	TCMX DCB	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-301-6.0-8.0-20230612 MR-301-25.0-27.0-20230612	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A soil samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-301-6.0-8.0-20230612 MR-301-25.0-27.0-20230612	2,4-D 2,4,5-TP	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Total Cyanide by SW-846 9010c+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9010c+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: A calibration blank associated with soil samples exhibited a detection for iron; however, all sample results were greater than five times the calibration blank detection. No qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was not performed on a sample location within this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Pace Analytical Services, LLC-Fairfield
Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010A / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

Method 9010C+9014:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 7473 / 1010A / 9045D / 9030B:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Samples 23F0537-01 and 23F0537-02 have surrogates outside of the QC limits (low), due to matrix interferences.

ANALYSIS: PCBs [8082A]

Sample 23F0537-02 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).
The percent recovery for 4,4'-DDT was outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Sample 23F0537-02 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for Benzaldehyde and Hexachlorocyclopentadiene were outside of the QC limits for the blank spike (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high).

Samples 23F0537-02 and 23F0537-02RE1 (1:500) have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low and high).

Sample 23F0537-02 has one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interference.
Sample 23F0537-02 has one surrogate (4-Bromofluorobenzene) outside of the QC limits (low), due to matrix interference.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Tentitively Identified Compound	Est Conc	RT	Qual	Units	Dilution	Analyzed
Reactive Cyanide	ND	0.00	U	mg/kg	1	6/14/23 18:00

SW 846 9030B - Reactivity (Reported as Totals) - TIC

Tentitively Identified Compound	Est Conc	RT	Qual	Units	Dilution	Analyzed
Reactive Sulfide	ND	0.00	U	mg/kg	1	6/19/23 16:00

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23F0619
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: September 3, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-301-65.0-67.0-20230613	23F0619-01	6/13/2024	Soil

Data validation was performed on the analytical data for one (1) sample collected June 13, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7470A/245.1
Reactive Cyanide	USEPA SW846 9010B
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9040C

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibrations, surrogates, and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When

parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-301-65.0-67.0-20230613	1,2-Dibromo-3-chloropropane Bromomethane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Octadecanoic acid, butyl ester and "unknown." Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-301-65.0-67.0-20230613	2,3,4,6-Tetrachlorophenol 2,4,5-Trichlorophenol 2,4,6-Trichlorophenol 2,4-Dichlorophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Fluoranthene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8151A	MR-301-65.0-67.0-20230613	DCAA	10% < %R < CL	J (detects) UJ (non-detects)	3L
8081B	MR-301-65.0-67.0-20230613	TCMX (Column 1) DCB (Column 1)	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-301-65.0-67.0-20230613	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A soil samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits. except for analytes presented in the following table.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Total Cyanide by SW-846 9010c+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was not performed on a sample location within this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

COMMENTS/SPECIAL INSTRUCTIONS

Cooler Temp. upon receipt at lab 2.5 C

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Pace Analytical Services, LLC-Fairfield
Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010A / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

Method 9010C+9014:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (high). The blank spike met all QC criteria.

Methods 7473 / 1010A / 9045D / 9030B:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Sample 23F0619-01 has surrogates outside of the QC limits (low), due to matrix interference.

ANALYSIS: PCBs [8082A]

Sample 23F0619-01 met all QC criteria.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).
The percent recovery for 4,4'-DDT was outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Sample 23F0619-01 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibration (SAF0367-CCV1) was outside of the QC limits for some compounds (low).

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23F0838
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: September 3, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-101-6.0-8.0-20230616	23F0838-01	6/16/2024	Soil

Data validation was performed on the analytical data for one (1) sample collected June 16, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7470A/245.1
Reactive Cyanide	USEPA SW846 9010B
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9040C

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibrations and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When

parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits.

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Octadecanoic acid, butyl ester. Associated sample detections were greater than five times the method blank detection and no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-101-6.0-8.0-20230616	2,3,4,6-Tetrachlorophenol 2,4,5-Trichlorophenol 2,4,6-Trichlorophenol 2,4-Dichlorophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Fluoranthene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8081B	MR-101-6.0-8.0-20230616	DCB (Column 1) DCB (Column 2)	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8082A	MR-101-6.0-8.0-20230616	Aroclor 1016	10% < %R < CL	J (detects) UJ (non-detects)	6L
8081B	MR-101-6.0-8.0-20230616	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A soil samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-101-6.0-8.0-20230616	2,4-D 2,4,5-TP (Silvex)	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Total Cyanide by SW-846 9010c+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was not performed on a sample location within this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Pace Analytical Services, LLC-Fairfield
Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010A / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Methods 7473 / 1010A / 9045D / 9010C+9014 / 9030B:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Sample 23F0838-01 met all QC criteria.

ANALYSIS: PCBs [8082A]

The percent recovery for Aroclor-1016 was outside of the QC limits for the blank spike (low).

Sample 23F0838-01 has one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (slightly high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).

Sample 23F0838-01 has two surrogates (Decachlorobiphenyl, Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]

Sample 23F0838-01 met all QC criteria.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23F0946
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: September 3, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-101-20.0-22.0-20230619	23F0946-01	6/19/2024	Soil
MR-101-65.0-67.0-20230619	23F0946-02	6/19/2024	Soil

Data validation was performed on the analytical data for two (2) samples collected June 19, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E; 1311/8270E

Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Due to major holding time deviations associated with TCLP leachate extractions TCLP results for VOCs, SVOCs, Pesticides, Herbicides and Mercury were qualified as follows: all non-detect results were qualified as rejected, and detections were qualified as estimated. SVOC Benzaldehyde was qualified as rejected due to major deviations associated with laboratory control samples. Additionally, Pesticide Methoxychlor was qualified as rejected due to major deviations associated with matrix spike samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, holding times, laboratory duplicates, surrogates, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP VOCs by 1311/8260D	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D-TCLP	MR-101-65.0-67.0-20230619	Bromoform Carbon tetrachloride	> CL	J (detects) No Action	6H

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
				(non-detects)	

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	Acetone	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
8260D-TCLP	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	Chloroform	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP SVOCs by 1311/8270E	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections Octadecanoic acid, butyl ester. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	Benzaldehyde	10% > %R < CL	J (detects) R (non-detects)	6L
8270E-TCLP	MR-101-65.0-67.0-20230619	Hexachlorobenzene	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS and/or MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E-TCLP	MR-101-65.0-67.0-20230619	Hexachlorobenzene	10% < %R < CL	J (detects) UJ (non-detects)	4L

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde associated with MR-101-65.0-67.0-20230619 which exhibited a correlation coefficient below the control limit. Non-detections were qualified as estimated, UJ, reason code Q.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-101-65.0-67.0-20230619	2,4-Dimethylphenol 4-Nitrophenol Benzaldehyde bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		bis(2-ethylhexyl)phthalate Butylbenzylphthalate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Herbicides by 1311/8151A,	MR-101-20.0-22.0-20230619	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1
TCLP Pesticides by 1311/8081B	MR-101-20.0-22.0-20230619	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8151A	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	DCAA	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-101-20.0-22.0-20230619	4,4'-DDD Aldrin alpha-BHC beta-BHC Endosulfan II gamma-BHC gamma-Chlordane	> CL	J (detects) No Action (non-detects)	6H
		Endosulfan sulfate Heptachlor epoxide	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B	MR-101-20.0-22.0-20230619	beta-BHC	> CL	J (detects) No Action (non-detects)	4H
		Endosulfan II gamma-BHC	10% < %R < CL	J (detects) UJ (non-detects)	4L
		Methoxychlor	10% > %R < CL	J (detects) R (non-detects)	4L

- Additionally, RPDs were outside control limit for Endrin ketone and Methoxychlor. Results were qualified as estimated, J, reason code 5.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A soil samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B-TCLP	MR-101-20.0-22.0-20230619	Endosulfan sulfate Endrin ketone	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7470A	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Mercury by 1311/7473	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-101-20.0-22.0-20230619 MR-101-65.0-67.0-20230619	Arsenic Barium Cadmium	> CL	J (detects) No Action (non-	6H

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Chromium Lead Selenium Silver		detects)	

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MR-101-65.0-67.0-20230619	Aluminum Antimony Arsenic Beryllium Cadmium Chromium Cobalt Copper Iron Lead Magnesium Nickel Potassium Selenium Silver Sodium Thallium Zinc	30% < %R < CL	J (detects) UJ (non-detects)	4L
6010D-TCLP	MR-101-20.0-22.0-20230619	Silver	30% < %R < CL	J (detects) No Action (non-detects)	4L

- RPDs were outside control limit for Antimony, Copper, Nickel and Thallium associated with 6010D analysis.
- Multiple analytes associated with the 6010D-TCLP analysis exhibited recoveries above control limits; however, sample results were greater than four times the spike value and no qualification was required.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis performed on sample MR-101-65.0-67.0-20230619 exhibited RPDs outside control limits for Beryllium, Copper, Lead and Zinc. Results are qualified as estimated, J, reason code D.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis performed on sample MR-101-65.0-67.0-20230619 exhibited acceptable %Ds.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-101-20.0-22.0-20230619	Silver	CCV %D > 10% (increase in response)	No Action (NDs) J (Detects)	SH

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010A / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Methods 7473 / 1010A / 9045D / 9010C+9014 / 9030B:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Samples 23F0946-01 and 23F0946-02 have surrogates outside of the QC limits (low), due to matrix interferences.

ANALYSIS: PCBs [8082A]

All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Benzaldehyde was outside of the QC limits for the blank spike (low).
The percent recoveries for 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

All samples met the QC criteria.

*Note:
The TCLP Herbicides and TCLP Pesticides analysis were not performed on sample 23F0946-02, due to insufficient sample volume.

The TCLP BNA, TCLP Herbicides, TCLP Pesticides and TCLP VO analysis for sample 23F0946-01 were logged in after the 14 day leaching holding time expired.
The TCLP BNA and TCLP VO analysis for sample 23F0946-02 were logged in after the 14 day leaching holding time expired.

The TCLP Mercury analysis for samples 23F0946-01 and 23F0946-02 were logged in after the 28 day leaching holding time expired.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for five (5) samples collected July 10 and 11, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D

Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Due to major holding time deviations associated with TCLP leachate extractions, TCLP results for VOCs, SVOCs, Pesticides, and Herbicides were qualified as follows: all non-detect results were qualified as rejected, and detections were qualified as estimated. SVOCs 1,4-Dioxane and Bis(2-chloroisopropyl)ether were qualified as rejected due to major deviations associated with laboratory control samples. Additionally, Pesticides Methoxychlor and 4,4-DDT associated with MR-207_9.0-10.0_20230710 were qualified as rejected due to major deviations associated with matrix spike samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibrations, holding times, surrogates, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP VOCs by 1311/8260D	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for “lab contamination.” Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E-TCLP	MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Bromoform Carbon tetrachloride	> CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-102_6.0-8.0_20230710	Acetone	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
		Cyclohexane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MR-207_9.0-10.0_20230710	Acetone Chloroethane Chloromethane	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
	MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Cyclohexane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8260D-TCLP	MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Chloroform	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP SVOCs by 1311/8270E	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester and Octadecanoic acid, butyl ester. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711	2,4-Dinitrophenol 3-Nitroaniline 4,6-Dinitro-2-methylphenol	> CL	J (detects) No Action (non-detects)	6H
	MR-207_9.0-10.0_20230710 MR-102_80.0-82.0_20230711	1,4-Dioxane bis(2-chloroisopropyl)ether	10% > %R < CL	J (detects) R (non-detects)	6L
8270E-TCLP	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	2,4-Dinitrotoluene	> CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde associated with MR-102_80.0-82.0_20230711 which exhibited a correlation coefficient below the control limit. Non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711	4-Chloroaniline Benzaldehyde bis(2-chloroethoxy)methane bis(2-chloroethyl)ether bis(2-chloroisopropyl)ether Isophorone Pentachlorophenol Phenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MR-102_80.0-82.0_20230711	1,4-Dioxane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Nitroaniline 4-Nitrophenol Benzaldehyde bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MR-207_9.0-10.0_20230710	1,4-Dioxane 2-Methylphenol 3+4-Methylphenol 4-Chloroaniline Benzaldehyde bis(2-chloroethoxy)methane bis(2-chloroethyl)ether bis(2-chloroisopropyl)ether Caprolactam n-Nitroso-di-n-propylamine Phenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-TCLP	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	2,4-Dinitrotoluene Nitrobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Herbicides by 1311/8151A,	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1
TCLP Pesticides by 1311/8081B		14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited a detection for Aldrin; however, since all sample results were non-detect, no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MR-207_9.0-10.0_20230710	DCB	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	2,4-D	> CL	J (detects) No Action (non-detects)	6H
8181B	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Aldrin Delta-BHC Endosulfan I Endosulfan sulfate Endrin Heptachlor Heptachlor epoxide	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B	MR-207_9.0-10.0_20230710	beta-BHC delta-BHC gamma-BHC Heptachlor Endosulfan I	> CL	J (detects) No Action (non-detects)	4H
		Dieldrin Endosulfan II Endrin	10% < %R < CL	J (detects) UJ (non-detects)	4L
		4,4'-DDT Methoxychlor	10% > %R < CL	J (detects) R (non-detects)	4L

- Additionally, RPDs were outside control limit for 4,4-DDT, Dieldrin, Endosulfan II, Endrin, Endrin aldehyde, and Methoxychlor. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30%

relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A soil samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	2,4-D 2,4,5-TP (Silvex)	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Mercury by 1311/7473	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	14 Days	HT < 1.5X HT Criteria	J (Detects) UJ (NDs)	1
Reactive Sulfide by SW-846 9030B	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710	7 Days	HT < 1.5X HT Criteria	J (Detects) UJ (NDs)	1

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Arsenic Barium Cadmium Chromium Lead Selenium Silver	> CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was performed on sample MR-207_9.0-10.0_20230710 for Cyanide exhibited acceptable recoveries and RPDs.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-207_9.0-10.0_20230710 MR-102_6.0-8.0_20230710 MR-102_20.0-22.0_20230710 MR-207_30-32_20230711 MR-102_80.0-82.0_20230711	Silver	CCV %D > 10% (increase in response)	No Action (NDs) J (Detects)	SH

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
H	Analyzed outside of holding time
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010B+ASTM D8175-18 / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

Method 9030B:
Samples 23G0474-01, -02 and -03 were analyzed one day beyond the holding time of 7 days.

Methods 7473 / 1010B+ASTM D8175-18 / 9045D / 9010C+9014:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

All samples met the QC criteria.

ANALYSIS: PCBs [8082A]

Sample 23G0474-01 has two surrogates (Decachlorobiphenyl, Decachlorobiphenyl [2C]) outside of the QC limits (low), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spikes and matrix spike duplicates (low and high).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spikes and matrix spike duplicates (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for several compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

*Note:
The TCLP BNA, TCLP Herbicides, TCLP Pesticides and TCLP VO analysis for samples 23G0474-01 through 23G0474-05 were logged in after the 14 day leaching holding time expired.

The TCLP Mercury analysis for samples 23G0474-01 through 23G0474-05 were logged in after the 28 day leaching holding time expired.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for five (5) samples collected July 11 - 13, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E; 1311/8270E
Pesticides	USEPA SW-846 8081B; 1311/8081B
Herbicides	USEPA SW-846 8151A; 1311/8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6020B; 1311/6020B
Mercury	USEPA 7473; 1311/7470A
Total Cyanide	USEPA SW846 9010C+9014
Reactive Cyanide	USEPA SW846 9010C+9014
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Due to major holding time deviations associated with TCLP leachate extractions, TCLP results for VOCs, SVOCs, Pesticides, and Herbicides were qualified as follows: all non-detect results were qualified as rejected, and detections were qualified as estimated. SVOCs 1,4-Dioxane and Bis(2-chloroisopropyl)ether were qualified as rejected due to major deviations associated with laboratory control samples. Additionally, multiple SVOCs associated with sample MR-204-6.0-8.0-20230711 were qualified as rejected due to major deviations associated with matrix spike samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, holding times, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP VOCs by 1311/8260D	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713	Acetone Chloroethane Chloromethane	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
	MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Cyclohexane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP SVOCs by 1311/8270E	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester and Octadecanoic acid, butyl ester. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	1,4-Dioxane bis(2-chloroisopropyl)ether	10% > %R < CL	J (detects) R (non-detects)	6L
8270E-TCLP	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Hexachlorobenzene	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-204-6.0-8.0-20230711	1,4-Dioxane 2,3,4,6-Tetrachlorophenol 2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol Hexachlorocyclopentadiene Pentachlorophenol	10% > %R < CL	J (detects) R (non-detects)	4L
		2,4,5-Trichlorophenol 2,4,6-Trichlorophenol 2-Methylphenol 3+4-Methylphenol Dimethylphthalate Phenol	10% < %R < CL	J (detects) UJ (non-detects)	4L
		Caprolactam	> CL	J (detects) No Action (non-detects)	4H

- Additionally, RPDs were outside control limit for 2,3,4,6-Tetrachlorophenol, 2,4,6-Trichlorophenol, 2-Methylphenol, 3+4-Methylphenol, 4-Chloroaniline, Caprolactam and Isophorone. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	1,4-Dioxane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Nitroaniline 4-Nitrophenol Benzaldehyde bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-TCLP	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Hexachlorobenzene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples extracted/analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For extractions/analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Herbicides by 1311/8151A,	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1
TCLP Pesticides by 1311/8081B		14 Days	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8081B	MR-204-6.0-8.0-20230711	DCB	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	2,4-D	> CL	J (detects) No Action (non-detects)	6H
8181B	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Endrin aldehyde Methoxychlor	> CL	J (detects) No Action (non-detects)	6H
8181B-TCLP	MR-204-6.0-8.0-20230711	Aldrin Delta-BHC Endosulfan I Endosulfan sulfate Endrin Heptachlor Heptachlor epoxide	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Aldrin Endosulfan sulfate Endrin	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce

quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met except for 2,4-D was outside the control limits for 8151A samples. Results are qualified as estimated, J, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	2,4-D 2,4,5-TP (Silvex)	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8081B	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Endosulfan sulfate Methoxychlor	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	180 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
TCLP Mercury by 1311/7473	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	14 Days	HT < 1.5X HT Criteria	J (Detects) UJ (NDs)	1

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Arsenic Barium Cadmium Chromium Lead Selenium Silver	> CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was performed on sample MR-204-6.0-8.0-20230711 for Cyanide exhibited acceptable recoveries and RPDs.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-204-6.0-8.0-20230711 MR-204-30.0-32.0-20230712 MR-205-6.0-7.0-20230713 MR-205-8.0-10.0-20230713 MR-205-15.0-17.0-20230713	Silver	CCV %D > 10% (increase in response)	No Action (NDs) J (Detects)	SH

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Pace Analytical Services, LLC-Fairfield
Data Reporting Abbreviations and Qualifiers

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:

"Definition and Procedure for the Determination of the Method Detection Limit, Revision 2"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifers:

B	Compound was also detected in the blank
D	The concentration is from a dilution
E	Concentration exceeds calibration range
H	Analyzed outside of holding time
IG_>60	> 60
J	Estimated
U	Compound not detected

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 7473 / 1010B+ASTM D8175-18 / 9045D / 9010C+9014 / 9030B]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

Methods 7473 / 1010B+ASTM D8175-18 / 9045D / 9010C+9014 / 9030B:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

All samples met the QC criteria.

ANALYSIS: PCBs [8082A]

All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan sulfate was outside of the QC limits for the matrix spike (low).
The blank spike met all QC criteria.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibration (SAG0302-CCV1) was outside of the QC limits for Cyclohexane and Dichlorodifluoromethane (low).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

*Note:
The TCLP BNA, TCLP Herbicides, TCLP Pesticides and TCLP VO analysis for samples 23G0678-01 through 23G0678-05 were logged in after the 14 day leaching holding time expired.

The TCLP Mercury analysis for samples 23G0678-01 through 23G0678-05 were logged in after the 28 day leaching holding time expired.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Analyte	Result	Qual	MDL	RL	Units	Dilution	Analyzed
Ignitability	> 60			20.0	°C	1	7/27/23 12:56

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23G1092
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: June 21, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-209-5.0-7.0-20230720	23G1092-01	7/20/2023	Soil
MR-209-15.0-17.0-20230720	23G1092-02	7/20/2023	Soil
MR-209-30.0-32.0-20230720	23G1092-03	7/20/2023	Soil

Data validation was performed on the analytical data for three (3) samples collected July 20, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E; 1311/8270E
Pesticides	USEPA SW-846 8081B; 1311/8081B
Herbicides	USEPA SW-846 8151A; 1311/8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6020B; 1311/6020B
Mercury	USEPA 7473; 1311/7470A
Total Cyanide	USEPA SW846 9010C+9014
Reactive Cyanide	USEPA SW846 9010C+9014
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOCs 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol were qualified as rejected due to major deviations associated with matrix spike samples and laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, holding times, surrogates, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D-TCLP	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	4-Bromobenzene	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8260D-TCLP	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	Bromoform	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
		Vinyl chloride	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester and Octadecanoic acid, butyl ester. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	2,4-Dinitrophenol	10% > %R < CL	J (detects) R (non-detects)	6L
		1,4-Dioxane	> CL	J (Detects) No action	6H

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Butylbenzylphthalate		(NDs)	

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS and/or MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-209-5.0-7.0-20230720	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol	10% > %R < CL	J (Detects) No action (NDs)	4L

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E-TCLP	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	2,4-Dinitrotoluene Hexachlorobutadiene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8270E		2,4-Dimethylphenol 2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Nitrophenol bis(2-chloroisopropyl)ether Hexachlorobutadiene Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		bis(2-chloroethyl)ether Butylbenzylphthalate bis(2-ethylhexyl)phthalate Di-n-octylphthalate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	Endrin aldehyde	> CL	J (Detects) No action (NDs)	6H
		Endosulfan sulfate	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	Aldrin Chlordane Endosulfan sulfate Endrin Heptachlor	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- MS and/or MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B-TCLP	MR-209-5.0-7.0-20230720	4,4-DDT 4,4-DDE Aldrin alpha-BHC Dieldrin Endosulfan sulfate Endrin Endrin ketone gamma-BHC Heptachlor Methoxychlor	10% < %R < CL	J (detects) UJ (non-detects)	4L

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A 8151A-TCLP	MR-209-5.0-7.0-20230720 MR-209-15.0-17.0-20230720 MR-209-30.0-32.0-20230720	2,4-D 2,4,5-TP	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses except for reactive sulfide by method 9030B. Since the analysis occurred within 1.5 times the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as estimated, UJ, reason code 1.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- The MS/MSD analysis was not performed on a sample location within this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 1311/6010D / 7473 / 1311/7470A / General Chemistry]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 1311/6010D / 7473 / 1311/7470A / General Chemistry:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]

Batch BAG1110:
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).

Batch BAG0205:
The percent recoveries for several compounds were outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 2,4-Dinitrophenol was outside of the QC limits for the blank spike (low).
The percent recoveries for 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibration (SAG0370-CCV1) was outside of the QC limits for Acetone (high).

Samples 23G1092-01, -02 and -03 have one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

4,4'-DDE	ND	U	0.000851	0.00156	mg/kg	1	8/1/23 19:11
4,4'-DDT	ND	U	0.00110	0.00156	mg/kg	1	8/1/23 19:11

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for seven (7) samples collected July 24 and 25, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D

Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020

- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Multiple SVOCs associated with sample MR-202-2.0-4.0-20230725 were qualified as rejected due to major deviations associated with matrix spike samples. Additionally, Methoxychlor associated with sample MR-208-6.0-8.0-20230724 was qualified as rejected due to major deviations associated with matrix spike samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, internal standards, holding times, surrogates, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D-TCLP	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	Dibromofluoromethane	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-202-15.0-17.0-20230725	Acetone	> CL	J (detects) No Action (non-detects)	4H

- Additionally, RPDs were outside control limit except for Bromomethane. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Internal standard	Exceedance	Qualification	Reason Code
8260D	MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725	1,4-Dichlorobenzene-d4	25% < %R < CL	J (detects) UJ (non-detects)	XH

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725	Acetone	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
	MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	Acetone 2-Butanone	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
8260D-TCLP	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	Vinyl chloride	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester and "unknown." Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	MR-202-2.0-4.0-20230725	2,4,6-Tribromophenol	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-208-6.0-8.0-20230724	Butylbenzylphthalate	> CL	J (detects) No Action (non-detects)	4H
8270E	MR-202-2.0-4.0-20230725	2,4-Dimethylphenol 3-Nitroaniline 4-Chloroaniline Acenaphthylene bis(2-chloroethoxy)methane Caprolactam Hexachloroethane Naphthalene Nitrobenzene n-Nitroso-di-n-propylamine n-Nitrosodiphenylamine Benzo(b)fluoranthene	> CL	J (detects) No Action (non-detects)	4H
		2,4-Dinitrotoluene Dibenzofuran Fluorene	10% < %R < CL	J (detects) UJ (non-detects)	4L
		4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Hexachlorocyclopentadiene Pentachlorophenol 2,4-Dinitrophenol bis(2-chloroethoxy)methane	10% > %R < CL	J (detects) R (non-detects)	4L

- Additionally, RPDs associated with MR-202-2.0-4.0-20230725 were outside control limit except for 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2-Methylphenol, 4-Chlorophenyl phenyl ether, Biphenyl, bis(2-chloroethoxy)methane and n-Nitroso-di-n-propylamine. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit for samples MR-208-6.0-8.0-20230724, MR-208-15.0-17.0-20230724 and MR-208-30.0-32.0-20230724. Non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724	1,4-Dioxane bis(2-chloroethyl)ether bis(2-ethylhexyl)phthalate Di-n-octylphthalate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		2,4-Dinitrophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-TCLP	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	2,4,6-Trichlorophenol 2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MR-202-2.0-4.0-20230725	DCB (column 2)	%R > CL	J (detects) No Action (non-detects)	3H
8151A	MR-208-30.0-32.0-20230724	DCAA	10% < %R < CL	J (detects) UJ (non-detects)	3L
8081B	MR-202-2.0-4.0-20230725	DCB (column 1&2)	%R > CL	J (detects) No Action (non-detects)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	4,4'-DDT Aldrin Chlordane Endosulfan sulfate Endrin Endrin aldehyde	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-208-6.0-8.0-20230724	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	4L
		Methoxychlor	10% > %R < CL	J (detects) R (non-detects)	4L

- Additionally, RPDs were outside control limit for Dieldrin. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce

quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A and 8151A-TCLP	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	2,4-D 2,4,5-TP (Silvex)	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and method holding times were achieved except for the samples/analytes listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5X the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
Reactive Cyanide by SW-846 9010C+9014	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	14 Days	HT < 1.5X HT Criteria	J (Detects) UJ (NDs)	1

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MR-208-6.0-8.0-20230724 MR-208-15.0-17.0-20230724 MR-208-30.0-32.0-20230724 MR-202-2.0-4.0-20230725 MR-202-8.0-10.0-20230725 MR-202-15.0-17.0-20230725 MR-202-30.0-32.0-20230725	Selenium	30% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
Reactive Sulfide by SW-846 9030B	MR-202-2.0-4.0-20230725	Reactive Sulfide	30% < %R < CL	J (detects) UJ (non-detects)	4L

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 1311/6010D / 7473 / 1311/7470A / 1010A / 9045D / 9014 / 9030B]

Method 6010D:
The percent recovery for Selenium was outside of the QC limits for the blank spikes (slightly low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
Method 9030B:
The percent recovery for Reactive Sulfide was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.
Methods 1311/6010D / 7473 / 1311/7470A / 1010A / 9014 / 9045D:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Sample 23G1341-03 has one surrogate (2,4-DCAA) outside of the QC limits (low), due to matrix interference.

ANALYSIS: PCBs [8082A]

Sample 23G1341-04 has one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

Sample 23G1341-04 has surrogates outside of the QC limits (high), due to matrix interference.

Batch BAH0152:
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).
The percent recoveries for Endosulfan II and Methoxychlor were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
Batch BAG0205:
The percent recoveries for several compounds were outside of the QC limits for the blank spike (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 2,4-Dinitrophenol was outside of the QC limits for the blank spike (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high).

Sample 23G1341-04 has one surrogate (2,4,6-Tribromophenol) outside of the QC limits (high), due to matrix interference.
Sample 23G1341-04RE1 has one surrogate (Nitrobenzene-d5) outside of the QC limits (high), due to matrix interference.

ANALYSIS: VOLATILES BY GC/MS [8260D]

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high). The blank spike met all QC criteria.

Samples 23G1341-01 through -07 have one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

Samples 23G1341-04 and -05 have one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interferences.

Corrosivity-pH	9.27				pH Units	1	7/26/23 18:49

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Reactive Cyanide	**0.35**	H	**0.12**	**0.12**	**mg/kg**	**1**	**8/9/23 14:44**	J, RC:1

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for thirteen (13) samples collected July 26 and 27, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E; 1311/8270E
Pesticides	USEPA SW-846 8081B; 1311/8081B
Herbicides	USEPA SW-846 8151A; 1311/8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6020B; 1311/6020B
Mercury	USEPA 7473; 1311/7470A
Total Cyanide	USEPA SW846 9010C+9014
Reactive Cyanide	USEPA SW846 9010C+9014
Reactive Sulfide	USEPA SW846 9030B
Ignitability	USEPA SW846 1010A
Corrosivity-pH	USEPA SW846 9045D

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP)

methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOC 2,4-Dinitrophenol results were qualified as rejected due to major deviations associated with laboratory control samples. SVOC bis(2-Chloroisopropyl)ether was qualified as rejected due to major deviations associated with matrix spike samples. Multiple VOCs associated with sample MR-303-20.0-22.0-20230727 were qualified as rejected due to major deviations associated with internal standards. Additionally, Dichlorodifluoromethane associated with sample MR-303-15.0-17.0-20230727 was qualified as rejected due to major deviations associated with matrix spike samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, internal standards, surrogates, matrix spike samples and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726	4-Bromofluorobenzene	10% < %R < CL	J (detects) UJ (non-detects)	3L
8260D	MR-201-12.0-14.0-20230726	4-Bromofluorobenzene	> CL	J (detects) No Action (non-detects)	3H
	MR-303-20.0-22.0-20230727	4-Bromofluorobenzene	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-303-15.0-17.0-20230727	Dichlorodifluoromethane	10% > %R < CL	J (detects) R (non-detects)	4L

- Additionally, RPDs were outside control limit except for Dichlorodifluoromethane. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Internal standard	Exceedance	Qualification	Reason Code
8260D	MR-303-20.0-22.0-20230727	1,4-Dichlorobenzene-d4	25% > %R < CL	J (detects) R (non-detects)	X

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727	Dichlorodifluoromethane	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
	MR-303-35.0-37.0-20230727	Acetone	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH
		Chloroethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
8260D-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726	Vinyl chloride	CCV %D > 20% (increase in response)	No Action (NDs) J (Detects)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester and "unknown." Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726	2,4-Dinitrophenol	10% > %R < CL	J (detects) R (non-detects)	6L

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727 MR-303-15.0-17.0-20230727				
	MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727	2,4-Dinitrophenol	10% > %R < CL	J (detects) R (non-detects)	6L
		Acenaphthylene Butylbenzylphthalate	%R > CL	J (detects) No Action (non-detects)	6H
8270E-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727	2,4-Dinitrotoluene	%R > CL	J (detects) No Action (non-detects)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-303-20.0-22.0-20230727	Acenaphthylene Benzo(a)anthracene Benzo(a)pyrene Benzo(b)fluoranthene Biphenyl Chrysene bis(2-chloroisopropyl)ether	10% > %R < CL	J (detects) R (non-detects)	4L
		Benzo(k)fluoranthene Benzo(g,h,i)perylene Dibenzofuran	10% < %R < CL	J (detects) UJ (non-detects)	4L

- Additionally, multiple SVOCs exhibited concentrations greater than four times the spike amount; Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit for samples MR-303-20.0-22.0-20230727 and MR-303-35.0-37.0-20230727. Non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-30.0-32.0-20230726	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline 4,6-Dinitro-2-methylphenol 4-Chloro-3-methylphenol Nitrobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727	2,4,6-Trichlorophenol 2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate; 7 days from leachate extraction; 40 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table:

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MR-105-6.0-8.0-20230726 MR-201-4.0-6.0-20230726	DCB (column 2)	%R > CL	J (detects) No Action (non-detects)	3H
	MR-105-35.0-37.0-20230726	TCMX (column 1&2)	%R > CL	J (detects) No Action (non-detects)	3H
		DCB (column 2)	%R > CL	J (detects) No Action (non-detects)	3H
	MR-105-50.0-52.0-20230726	TCMX (column 1)	%R > CL	J (detects) No Action (non-detects)	3H
	MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726	DCB (column 1)	10% < %R < CL	J (detects) UJ (non-detects)	3L
	MR-303-20.0-22.0-20230727	TCMX (column 2) DCB (column 2)	%R > CL	J (detects) No Action (non-detects)	3H

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8081B	MR-105-6.0-8.0-20230726 MR-105-35.0-37.0-20230726 MR-303-20.0-22.0-20230727	DCB (column 2)	%R > CL	J (detects) No Action (non-detects)	3H

8081B-TCLP	MR-201-4.0-6.0-20230726	DCB (column 1)	10% < %R < CL	J (detects) UJ (non-detects)	3L
	MR-201-17.0-19.0-20230726	DCB (column 1&2)	10% < %R < CL	J (detects) UJ (non-detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726	Endosulfan I Endosulfan II Endrin aldehyde Endrin ketone Methoxychlor	%R > CL	J (detects) No Action (non-detects)	6H
	MR-303-4.0-6.0-20230727 MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727	Endosulfan II	10% < %R < CL	J (detects) UJ (non-detects)	6L
8181B-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726	All compounds except for: alpha-BHC beta-BHC delta-BHC Dieldrin	10% < %R < CL	J (detects) UJ (non-detects)	6L
	MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727 MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727	4,4-DDD 4,4-DDE Endosulfan I Endosulfan II Methoxychlor	%R > CL	J (detects) No Action (non-detects)	6H
		Endosulfan sulfate	10% < %R < CL	J (detects) UJ (non-detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established

acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8181B	MR-303-15.0-17.0-20230727	Methoxychlor	%R > CL	J (detects) No Action (non-detects)	6H

- Additionally, RPDs were outside control limit for Endrin Ketone and Methoxychlor. Non-detected Results were not qualified.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All RSDs and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A and 8151A-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726	2,4-D 2,4,5-TP (Silvex)	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727 MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727				
8081	MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726	4,4'-DDT Methoxychlor	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8081-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726				

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilize retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9010C+9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	ASAP

- All samples were received properly preserved and method holding times were achieved.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727	Selenium	10% < %R < CL	J (detects) UJ (non-detects)	6L

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727				

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
Reactive Sulfide by SW-846 9030B	MR-201-17.0-19.0-20230726	Reactive Sulfide	10% < %R < CL	J (detects) UJ (non-detects)	4L

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D-TCLP	MR-105-6.0-8.0-20230726 MR-105-20.0-22.0-20230726 MR-105-35.0-37.0-20230726 MR-105-50.0-52.0-20230726 MR-105-65.0-67.0-20230726 MR-201-4.0-6.0-20230726 MR-201-12.0-14.0-20230726 MR-201-17.0-19.0-20230726 MR-201-30.0-32.0-20230726 MR-303-4.0-6.0-20230727 MR-303-15.0-17.0-20230727 MR-303-20.0-22.0-20230727 MR-303-35.0-37.0-20230727	Silver	CCV %D > 10% (increase in response)	No Action (NDs) J (Detects)	SH

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial Dilution

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 1311/6010D / 7473 / 1311/7470A / 1010A / 9045D / 9014 / 9030B]

Method 6010D:
The percent recovery for Selenium was outside of the QC limits for the blank spikes (slightly low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 9030B:
The percent recovery for Reactive Sulfide was outside of the QC limits for the matrix spikes and matrix spike duplicates (low). The blank spikes met all QC criteria.

Methods 1311/6010D / 7473 / 1311/7470A / 1010A / 9045D / 9014:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

All samples met the QC criteria.

ANALYSIS: PCBs [8082A]

Some of the samples have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]

Some of the samples have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spikes and matrix spike duplicates (low and high).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spikes and matrix spike duplicates (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Dichlorodifluoromethane was outside of the QC limits for the matrix spike duplicate (low).
The percent recovery for Bromoform was outside of the QC limits for the blank spike and blank spike duplicate (low).

Sample 23G1483-12 has one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interference.
Some of the samples have surrogates outside of the QC limits (low and high), due to matrix interferences.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Analyte	Result	Qual	MDL	RL	Units	Dilution	Analyzed
Ignitability	> 60			20.0	°C	1	8/1/23 17:30

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23G1576
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: March 13, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MR-303-75.0-77.0-20230728	23G1576-01	7/28/2023	Soil

Data validation was performed on the analytical data for one (1) sample collected July 28, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D; 1311/8260D
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E; 1311/8270E

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOC 2,4-Dinitrophenol was qualified as rejected due low laboratory control sample recoveries. Additionally, minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibrations, and laboratory control samples.

Chain of Custody:

- No issues noted with the Chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D and	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.
TCLP VOCs by 1311/8260D	Soil	14 Days from collection to leachate and analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30%

relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MR-303-75.0-77.0-20230728	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Chloroethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
8260D-TCLP	MR-303-75.0-77.0-20230728	Bromoform	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP SVOCs by 1311/8270E	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-303-75.0-77.0-20230728	2,4-Dinitrophenol	10% > %R < CL	J (Detects) R (NDs)	6L
		Butylbenzylphthalate	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MR-303-75.0-77.0-20230728	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol bis(2-chloroisopropyl)ether Hexachlorocyclopentadiene Pentachlorophenol 4-Nitrophenol Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		1,4-Dioxane bis(2-chloroethyl)ether Di-n-octylphthalate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8270E-TCLP	MR-303-75.0-77.0-20230728	2,4,6-Trichlorophenol 2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
TCLP Herbicides by 1311/8151A	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.
TCLP Pesticides by 1311/8081B	Soil	14 Days from collection to leachate and 7 days from leachate to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	MR-303-75.0-77.0-20230728	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
8081B TCLP	MR-303-75.0-77.0-20230728	4,4'-DDD 4,4'-DDE Endosulfan I Endosulfan II gamma-Chlordane Methoxychlor	>CL	J (Detects) No action (NDs)	6H
		Endosulfan sulfate	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement is not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
TCLP Metals by 1311/6010D	Soil	180 days from collection to Leachate and 180 days to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
TCLP Mercury by 1311/7473	Soil	28 days from collection to Leachate and 28 days to analysis	Cool to <6 °C.
Reactive Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Reactive Sulfide by SW-846 9030B	Soil	7 days from collection to analysis	Cool to <6 °C.
Ignitability by SW-846 1010A	Soil	14 days from collection to analysis	Cool to <6 °C.
Corrosivity by SW-846 9045	Soil	7 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MR-303-75.0-77.0-20230728	Selenium	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

- A MS/MSD analysis was not performed on a sample within this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample within this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on a sample within this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for samples in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or
NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 1311/6010D / 7473 / 1311/7470A / General Chemistry]

Method 6010D:
The percent recovery for Selenium was outside of the QC limits for the blank spike (low).
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Methods 1311/6010D / 7473 / 1311/7470A / General Chemistry:
Sample 23G1576-01 met all QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23G1576-01 met all QC criteria.

ANALYSIS: PCBs [8082A]
Sample 23G1576-01 met all QC criteria.

ANALYSIS: PESTICIDES [8081B]

Batch BAH0275:
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).
The percent recovery for Methoxychlor was outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Batch BAH0321:
The percent recoveries for several compounds were outside of the QC limits for the blank spikes (low and high).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations (SAH0116-CCV1, SAH0222-CCV1) were outside of the QC limits for some compounds (low and high).

The percent recovery for 2,4-Dinitrophenol was outside of the QC limits for the blank spike (low).
The percent recoveries for several compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibration (SAH0131-CCV1) was outside of the QC limits for Acetone (high) and Chloroethane (low).

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Positive Results Only Summary

23G1576-01 (Soil) Sample Name: **MR-303-75.0-77.0-20230728**

SW 846 8270E - Semivolatile Organics - GC/MS - BNA+25 - TIC (con't)
