Lab Number: L2326380
Report Date: 06/08/23

Alpha Sample ID	Client ID	Matrix	Sample Location	Collection Date/Time	Receive Date
L2326380-01	23E0505-02	SOIL	Not Specified	05/08/23 11:30	05/11/23
L2326380-02	23E0505-03	SOIL	Not Specified	05/08/23 12:00	05/11/23

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

June 08, 2023: This final report includes the results of all requested analyses.

May 25, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Tiffani Morrissey Report Date: 06/08/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD	
	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2326643 and L2326793
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: May 9, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
OH-SV-07_20230512	L2326643-01	5/12/2023	Air
OH-SV-06_20230513	L2326793-01	5/13/2023	Air

Data validation was performed on the analytical data for two (2) samples collected May 12-13 by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Volatile Organic Compounds (VOCs)	USEPA TO-15

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-31)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries

- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial and continuing calibrations.

Chain of Custody:

- No issues were noted with the chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by EPA TO-15	Air	30 days from collection to analysis	Ambient temperature

- All samples were received properly preserved, at acceptable cannister pressures, and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 30% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
TO-15	OH-SV-07_20230512	1,2,4-Trimethylbenzene	%RSD > 30%	UJ (NDs) J (Detects)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 30% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
TO-15	OH-SV-07_20230512	1,1-Dichloroethene tert-Butyl alcohol	CCV %D > 30% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Senior Validator
Brown and Caldwell

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on May 12, 2023. The canister certification results are provided as an addendum.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J Anderson Report Date: 05/24/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

ND - Not detected at the reporting limit (RL) for the sample.

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD	
	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on May 12, 2023. The canister certification results are provided as an addendum.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Christopher J Anderson Report Date: 05/26/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: Data Usability Report

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: Data Usability Report

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

ND - Not detected at the reporting limit (RL) for the sample.

Volatile Organics Instruments

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Sample Delivery Group Summary

Alpha Job Number : L2326793

Account Name : Aqua Pro-Tech Laboratories
Project Number : 156854
Project Name : GOWANUS OH-007

Received : 15-MAY-2023
Reviewer : Jennifer Jerome

Delivery Information

Samples Delivered By : Alpha Courier

Chain of Custody : Present

Cooler Information

Cooler	Seal/Seal#	Preservation	Temperature(°C)	Additional Information
NA	Absent/			

Condition Information

1) All samples on COC received?	**YES**
2) Extra samples received?	**NO**
3) Are there any sample container discrepancies?	**NO**
4) Are there any discrepancies between COC & sample labels?	**NO**
5) Are samples in appropriate containers for requested analysis?	**YES**
6) Are samples properly preserved for requested analysis?	**YES**
7) Are samples within holding time for requested analysis?	**YES**
8) All sampling equipment returned?	**YES**

Volatile Organics/VPH

1) Reagent Water Vials Frozen by Client?	**NA**

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2326888 and 23E0684
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: July 16, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
FB-20230512	23E0684-01	5/12/2023	Water
OH-SB-46_1.0-2.0_20230512	23E0684-02 L2326888-01	5/12/2023	Soil
OH-SB-46_3.0-4.0_20230512	23E0684-03 L2326888-02	5/12/2023	Soil
TB-20230512	23E0684-04	5/12/2023	Water

Data validation was performed on the analytical data for four (4) samples collected on May 12, 2023 by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270E-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW-846 6010D/200.7
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW-846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial calibration, continuing calibration, surrogates, and laboratory control samples.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	LCS Lab Number	Analyte(s)	Exceedance	Qualification	Reason Code	Affected Samples
8260D	BAE0730-BSD1	Bromomethane	%R < CL%	UJ (NDs) J (Detects)	6L	FB-20230512 TB-20230512

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on subject samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	All Samples	Tert-Butyl Alcohol	RRF < 0.05	UJ (NDs) J (Detects)	Q
	FB-20230512 TB-20230512	Methyl Acetate	RSD > 20% & missing backup to confirm correlation coefficient	UJ (NDs) J (Detects)	Q

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	All Soil Samples	Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	FB-20230512 TB-20230512	Bromomethane Chloromethane Dichlorodifluoromethane Trans-1,3-Dichloropropene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, J, reason code A.

System Performance and Overall Assessment (Sequence/Tune)

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270D/E and 8270E-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

All QA/QC blanks were free of contamination with the following exception:

- The field blank associated with soil samples had TIC detections of Cyclohexasiloxane, dodecamethyl- (19.5 ug/L), Cyclopentasiloxane, decamethyl- (8.83 ug/L), and unknowns (13.26 ug/L). Associated sample non-detections are not qualified. TICs are not qualified from a field blank, therefore; no qualification is required.
- The method blank associated with soil samples had TIC detections (via method 8270E) of Hexadecanoic acid, butyl ester (0.382 mg/kg wet), Octadecanoic acid, 2-methylpropyl ester (0.437 mg/kg wet), and unknowns (0.417 mg/kg wet). Samples were non-detect for these TICs, except for unknowns, and therefore are not qualified. Sample detections of unknowns were not qualified based on professional judgment.
- The method blank associated with soil samples had detections (via method 8270E-SIM) of Pyrene, C1-Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-Chrysenes, Benzo(e)pyrene, Benzo(a)pyrene, and Benzo(g,h,i)perylene (0.449, 0.583, 0.240, 0.231, 0.380, 0.237, 0.298, 0.310 ug/kg, respectively). Sample detections greater than five times the method blank detections are not qualified.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	LCS Lab Number	Analyte(s)	Exceedance	Qualification	Reason Code	Affected Samples
8270E	BAE0539-BS1	4-Bromophenyl-phenyl ether	%R > CL%	No action (NDs) J (Detects)	6H	All Soil Samples

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230512	Benzaldehyde	RSD > 20% and correlation coefficient <0.99	J (Detects) UJ (ND)	Q
	All soil samples	Benzaldehyde	RSD > 20% and missing back to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E (APL)	All Soil Samples	Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline 4-Bromophenyl-phenyl ether 4-Nitroaniline 4-Nitrophenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Di-n-butylphthalate Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	FB-20230512	4-Nitrophenol Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8270E-SIM (Alpha)	All Soil Samples	Naphthalene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	FB_20230512	Decachlorobiphenyl (Column 1 and 2)	%R < CL	J (detects) UJ (NDs)	3L
8151A	FB_20230512	2,4-DCAA (Column 1)	%R > CL	J (detects) No action (NDs)	3H
	OH-SB-46_1.0-2.0_20230512 [23E0684-02]	2,4-DCAA (Column 1)	%R < CL	J (detects) UJ (NDs)	3L
8081B	OH-SB-46_3.0-4.0_20230512 [23E0684-03]	Decachlorobiphenyl (Column 2)	%R > CL	J (detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis and LCS/LCSD RPDs exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230512	Endosulfan sulfate	%R < CL	J (Detects) UJ (NDs)	6L
		Endrin aldehyde Endrin ketone Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

- An LCS and/or LCSD analysis was not reported for method 8151A for water sample FB_20230512.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- An MS/MSD analysis were not included for the SDGs evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.
- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by EPA 200.7	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
Metals by SW 846 6010D	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
Cyanide by SM 846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
200.7	FB_20230512	Aluminum	%R > CL	J (Detects) No Action (NDs)	6H
	All Soil Samples	Silver	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was performed on sample OH-SB-46_3.0-4.0_20230512 [23E0684-3]. Results were within control limits. No qualification required.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was performed on sample OH-SB-46_1.0-2.0_20230512 [23E0684-2]. Results were within control limits. No qualification required.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Peer Review: JLD

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 200.8 / 7473 / 245.1 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.8
The percent recovery for Silver was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 7473 / 245.1 / 200.7 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23E0684-01 (FB) has one surrogate (2,4-DCAA) outside of the QC limits (high).

ANALYSIS: PCBs [8082A]
All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]
Sample 23E0684-03 has one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interference.

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 3,3'-Dichlorobenzidine and Hexachlorocyclopentadiene were outside of the QC limits for the matrix spike duplicate (low). The blank spike met all QC criteria.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

o-Xylene		ND	U	0.000417	0.00324	mg/kg	1	5/16/23 15:32

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

SW 846 8260D - Volatile Organics - GC/MS - VO+15 - TIC

Tentitively Identified Compound	Est Conc	RT	Qual	Units	Dilution	Analyzed
No TICs Found			U			

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 23, 2023: The Client IDs were amended on L2326888-01 and -02.

Report Submission

June 12, 2023: This final report includes the results of all requested analyses.

May 30, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Report Date: 10/23/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Volatile Organics Instruments

Data validation was performed on the analytical data for four (4) samples collected May 11, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, surrogates, laboratory control samples, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Sample OH-SB-45-4.0-5.0-20230511 was logged in incorrectly by the laboratory as "OH-SB-45-4.0-5.0-2.0-20230511." The sample ID was updated in the database and DV Report as "OH-SB-45-4.0-5.0-20230511."
- Sample FB-20230511 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	FB-20230511	4-Bromofluorobenzene	%R < CL	UJ (NDs) J (Detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.
-

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB-20230511	1,4-Dichlorobenzene	%R > CL	No action (NDs) J (Detects)	6H
		Bromomethane	%R < CL	UJ (NDs) J (Detects)	6L
	OH-SB-45-1.0-2.0-0230511 OH-SB-45-4.0-5.0-0230511	Acetone	%R > CL	No action (NDs) J (Detects)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230511	1,2,4-Trichlorobenzene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	0H-SB-45-1.0-2.0-20230511 0H-SB-45-4.0-5.0-20230511	2-Butanone Acetone Cyclohexane	CCV %D > 20% (increase in response)	No action (NDs) J (Detects)	SH
	TB-20230511	1,2,3-Trichlorobenzene 1,2-Dichlorobenzene 1,4-Dichlorobenzene	CCV %D > 20% (increase in response)	No action (NDs) J (Detects)	SH
		Bromomethane Chloromethane Dichlorodifluoromethane trans-1,3-Dichloropropene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples had TIC detections of Hexadecanoic acid, butyl ester and Octadecanoic acid, butyl ester. Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270D-SIM	OH-SB-45-1.0-2.0-20230511 OH-SB-45-4.0-5.0-20230511	Naphthalene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E	FB-20230511	Benzaldehyde 4-Nitrophenol n-Nitroso-di-n-propylamine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene	CCV %D > 20% (increase in	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
			response)		
	OH-SB-45-1.0-2.0-20230511 OH-SB-45-4.0-5.0-20230511	Benzaldehyde 3-Nitroaniline 4-Nitrophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		2,6-Dinitrotoluene 2-Nitroaniline 4-Bromophenyl-phenyl ether 4-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Di-n-butylphthalate Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8081B	OH-SB-45-1.0-2.0-20230511	Decachlorobiphenyl [2C]	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230511	Endrin aldehyde Endrin ketone Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H
		Endosulfan sulfate	%R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230511	Aluminum	%R > CL	No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was not performed on samples evaluated in this report.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

COMMENTS/SPECIAL INSTRUCTIONS

Cooler Temp. upon receipt at lab 4.0

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 200.8 / 7473 / 245.1 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Method 200.8
The percent recovery for Silver was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 7473 / 245.1 / 200.7 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]
Sample 23E0605-02 has one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interference.

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).

The percent recoveries for 1,2,3-Trichlorobenzene and 1,2,4-Trichlorobenzene were outside of the QC limits for the matrix spike (low). The blank spike met all QC criteria.

Samples 23E0605-01 (FB) has one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 3,3'-Dichlorobenzidine and Indeno(1,2,3-cd)pyrene were outside of the QC limits for the matrix spike (low). The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike duplicate (low). The blank spike met all QC criteria.

SW 846 8260D - Volatile Organics - GC/MS - VO+15 - TIC

Analyte	Result	Qual	MDL	RL	Units	Dilution	Analyzed
TIC_1,2,3-TRIMETHYL-2-VINYL-1,3-DIAZA-2-SILA	0.0113	J			mg/kg dry	1	5/16/23 22:08
TIC_Cyclopropane, ethyl-	0.0387	J			mg/kg dry	1	5/16/23 22:08

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for twelve (12) samples collected May 13 through May 15, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Silver results were rejected due to major recovery issues associated with laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibration, surrogates, laboratory control samples, matrix spike samples and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Samples FB_20230513 and FB_20230515 were listed for Alkylated PAH analysis; these samples were not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230511 TB_20230513 FB-20230515	Bromomethane	10%< %R < CL	UJ (NDs) J (Detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analytes	Exceedance	Qualification	Reason Code
8260D	0H-SB-34_1.0-2.0_20230513	1,2,3-Trichlorobenzene	10%< %R < CL	UJ (NDs) J (Detects)	4L
		1,2,4-Trichlorobenzene			
		1,2-Dichlorobenzene			
		1,4-Dichlorobenzene			
		cis-1,3-Dichloropropene			
		Trichloroethene			

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB_20230513 TB_20230513 FB_20230515	Bromomethane Chloromethane Dichlorodifluoromethane trans-1,3-Dichloropropene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	OH-SB-34_1.0-2.0_20230513 OH-SB-34_2.0-3.0_20230513 OH-SB-33_1.0-2.0_20230513 OH-SB-33_3.5-4_20230513 OH-SB-20_1.0-2.0_20230515 OH-SB-20_4.0-5.0_20230515 OH-SB-15_3.5-4.5_20230515 OH-SB-15_6.0-7.0_20230515 OH-SB-66-1.0-2.0_20230515	2-Butanone 2-Hexanone Acetone Trichloroethene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples had TIC detections of Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester and unknowns. Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.
- Nitrobenzene-d5 recovery was above control limit for sample OH-SB-20_4.0-5.0_20230515 but met the criteria of two of the three SVOC surrogates within control limits.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	0H-SB-34_1.0-2.0_20230513 0H-SB-34_2.0-3.0_20230513 0H-SB-33_1.0-2.0_20230513 0H-SB-33_3.5-4_20230513 0H-SB-20_1.0-2.0_20230515 0H-SB-20_4.0-5.0_20230515 0H-SB-15_3.5-4.5_20230515 0H-SB-15_6.0-7.0_20230515 0H-SB-66-1.0-2.0_20230515	2,4-Dinitrotoluene 2,6-Dinitrotoluene	10% < %R < CL	UJ (NDs) J (Detects)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270D-SIM	OH-SB-20_1.0-2.0_20230515 OH-SB-66-1.0-2.0_20230515	Naphthalene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

	OH-SB-66-1.0-2.0_20230515	3-Nitroaniline			
	FB_20230513	4-Nitrophenol Benzaldehyde Hexachlorobenzene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	FB_20230515	2,4-Dinitrophenol 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol 4-Nitrophenol Butylbenzylphthalate Caprolactam Di-n-octylphthalate Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-34_1.0-2.0_20230513 OH-SB-34_2.0-3.0_20230513 OH-SB-33_1.0-2.0_20230513 OH-SB-33_3.5-4_20230513 OH-SB-66-1.0-2.0_20230515	Decachlorobiphenyl [1C]	10% < %R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-20_4.0-5.0_20230515	Decachlorobiphenyl [1C]	%R > CL	J (Detects) No action (NDs)	3H
8151A	FB_20230513 FB_20230515	2,4-DCAA	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-33_1.0-2.0_20230513 OH-SB-20_1.0-2.0_20230515	2,4-DCAA	10% < %R < CL	J (Detects) UJ (NDs)	3L
8081	OH-SB-15_6.0-7.0_20230515	Decachlorobiphenyl [1C]	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB_20230513 FB_20230515	Endrin aldehyde Endrin ketone Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H
		Endosulfan sulfate	10% < %R < CL	J (Detects) UJ (NDs)	6L
	OH-SB-34_1.0-2.0_20230513 OH-SB-34_2.0-3.0_20230513 OH-SB-33_1.0-2.0_20230513 OH-SB-33_3.5-4_20230513	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
	OH-SB-20_1.0-2.0_20230515 OH-SB-20_4.0-5.0_20230515 OH-SB-15_3.5-4.5_20230515 OH-SB-15_6.0-7.0_20230515 OH-SB-66-1.0-2.0_20230515	Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries and RPDs.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- The field blank FB_20230513 had a detection for zinc; all associated sample results for zinc were greater than five times the blank detection and therefore no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB_20230513 FB_20230515	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis performed for mercury exhibited acceptable recoveries and RPDs.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis performed for mercury exhibited acceptable RPDs.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.7:
The percent recovery for Silver was outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Some of the samples have surrogates outside of the QC limits, due to matrix interferences.

ANALYSIS: PCBs [8082A]
Some of the samples have surrogates outside of the QC limits, due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E0721-01, -02 and -10 have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interferences.

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).

The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 2,4-Dinitrotoluene and 2,6-Dinitrotoluene were outside of the QC limits for the blank spike (low).
The percent recovery for 2,4-Dinitrophenol was outside of the QC limits for the matrix spike (slightly low).

Sample 23E0721-08 (1:5) has one surrogate (Nitrobenzene-d5) outside of the QC limits (high), due to matrix interference.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

SW 846 8260D - Volatile Organics - GC/MS - VO+15 - TIC

Tentitively Identified Compound	Est Conc	RT	Qual	Units	Dilution	Analyzed
No TICs Found			U			

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Tetrachloroethene	ND	U	0.466	1.00	ug/L	1	5/17/23 20:20	

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for eight (8) samples collected May 15 through May 16, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020

- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Certain poor responding SVOC results were rejected due to major recovery issues associated with matrix spike/matrix spike duplicates samples. Additionally, silver results were rejected due to major recovery issues associated with laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibration, surrogates, laboratory control samples, matrix spike samples, laboratory duplicates and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Sample FB-20230516 was listed for Alkylated PAH analysis but was not performed on this sample.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230516	Bromomethane	10%< %R < CL	UJ (NDs) J (Detects)	6L
	OH-SB-66-6.0-7.0-20230515 OH-SB-30-3.0-4.0-20230516 OH-SB-30-6.5-7.5-20230516 OH-SB-13-3.0-4.0-20230516 OH-SB-13-15-16-20230516	2-Butanone Acetone Bromomethane Chloromethane cis-1,3-Dichloropropene Tetrachloroethene trans-1,2-Dichloroethene trans-1,3-Dichloropropene	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analytes	Exceedance	Qualification	Reason Code
8260D	0H-SB-13-3.0-4.0-20230516	1,1,2,2-Tetrachloroethane 1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2-Dichlorobenzene 1,3-Dichlorobenzene 1,4-Dichlorobenzene Chlorobenzene EthylBenzene Isopropylbenzene m+p-Xylenes Methylcyclohexane o-Xylene Styrene Tetrachloroethene	10% < %R < CL	UJ (NDs) J (Detects)	4L
		2-Butanone 2-Hexanone 4-Methyl-2-pentanone Acetone tert-Butyl alcohol Trichloroethene	%R > CL	J (Detects) No action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative

response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230516 TB-20230516	Bromomethane Chloromethane Dichlorodifluoromethane trans-1,3-Dichloropropene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	0H-SB-66-6.0-7.0-20230515 0H-SB-30-3.0-4.0-20230516 0H-SB-30-6.5-7.5-20230516 0H-SB-13-3.0-4.0-20230516 0H-SB-13-15-16-20230516	1,2-Dibromo-3-chloropropane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	0H-SB-66-6.0-7.0-20230515 0H-SB-30-3.0-4.0-20230516 0H-SB-30-6.5-7.5-20230516 0H-SB-13-3.0-4.0-20230516 0H-SB-13-15-16-20230516	2-Butanone 2-Hexanone Acetone Bromomethane Chloromethane Cyclohexane trans-1,2-Dichloroethene Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples had TIC detections of Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester and 4-hydroxy-4-methyl-2-Pentanone,. Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The field blank FB_20230513 had a detection for bis(2-Ethylhexyl)phthalate. Associated sample analytes less than five times the field blank detection are qualified as follows: detections below the RL are qualified as estimated, UJ, at the RL; detections above the RL are qualified as estimated, UJ, at the sample concentration, reason code 7. Non-detections are not qualified.
- The 8270E-SIM method blank had low-level detections for PAHs naphthalene and C1-Naphthalenes; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	0H-SB-30-3.0-4.0-20230516 0H-SB-30-6.5-7.5-20230516 0H-SB-13-3.0-4.0-20230516 0H-SB-13-5-6-20230516 0H-SB-13-15-16-20230516	2-Methylphenol	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS and/or MSD analysis exhibited acceptable recoveries and RPDs except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	0H-SB-13-3.0-4.0-20230516	4,6-Dinitro-2-methylphenol Hexachlorocyclopentadiene 2,4-Dinitrophenol	10% > %R < CL	J (Detects) R (NDs)	4L
		bis(2-ethylhexyl)phthalate Butylbenzylphthalate	%R > CL	J (Detects) No action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270D-SIM	OH-SB-30-6.5-7.5-20230516 OH-SB-13-3.0-4.0-20230516	Acenaphthene Acenaphthylene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8151A	OH-SB-30-6.5-7.5-20230516 OH-SB-13-3.0-4.0-20230516	2,4-DCAA	10% < %R < CL	J (Detects) UJ (NDs)	3L
8082A	OH-SB-30-3.0-4.0-20230516 OH-SB-13-15-16-20230516	DCB	10% < %R < CL	J (Detects) UJ (NDs)	3L
	FB-20230516	TCMX	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-66-6.0-7.0-20230515	TCMX (Column 1)	10% < %R < CL	J (Detects) UJ (NDs)	3L
		DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-13-5-6-20230516	TCMX	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230516	4,4'-DDT	10% < %R < CL	J (Detects) UJ (NDs)	6L
	0H-SB-66-6.0-7.0-20230515 0H-SB-30-3.0-4.0-20230516 0H-SB-30-6.5-7.5-20230516 0H-SB-13-3.0-4.0-20230516 0H-SB-13-5-6-20230516	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
	0H-SB-13-15-16-20230516	4,4'-DDD 4,4'-DDE alpha-BHC beta-BHC Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS and/or MSD analysis exhibited acceptable recoveries and RPDs except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	0H-SB-13-3.0-4.0-20230516	Aroclor 1260	%R > CL	J (Detects) No action (NDs)	3H
8081B	0H-SB-13-3.0-4.0-20230516	Multiple Analytes	%R > CL	J (Detects) No action (NDs)	3H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230516	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L
6010D	OH-SB-66-6.0-7.0-20230515 OH-SB-30-3.0-4.0-20230516 OH-SB-30-6.5-7.5-20230516 OH-SB-13-3.0-4.0-20230516 OH-SB-13-5-6-20230516 OH-SB-13-15-16-20230516	Silver	20% > %R < CL	J (Detects) R (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis performed for mercury exhibited acceptable recoveries and RPDs.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	OH-SB-66-6.0-7.0-20230515	Aluminum Silver	%R > CL	J (Detects) No action (NDs)	4L
6010D	OH-SB-66-6.0-7.0-20230515	Antimony Selenium	30% < %R < CL	J (Detects) UJ (NDs)	4L

- Spike recovery requirement not applicable when the sample concentration exceeds the spike concentration by a factor of four or more.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate RPDs for sample OH-SB-66-6.0-7.0-20230515 exceeded control limits for the following metals: aluminum, barium, beryllium, calcium, cobalt, iron, lead, magnesium, nickel, potassium and vanadium. Associated sample detections are qualified as estimated, J, reason code D.
- Mercury concentrations for the sample OH-SB-66-6.0-7.0-20230515 and/or duplicate were less than five times the RL and the difference between results was greater than the control limit. Associated sample detections are qualified as estimated, J, reason code D.
- Arsenic concentrations for the sample OH-SB-66-6.0-7.0-20230515 and/or duplicate were less than five times the RL but the difference between results was less than the control limit. No qualification was required.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low and high).

Method 200.7
The percent recovery for Silver was outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23E0803-01, -02, -03, -05, -06 and 23E0803-07 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Samples 23E0803-02 and 23E0803-07 have one surrogate (Decachlorobiphenyl) outside of the QC limits (low), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E0803-01, -02, -03, -05, -06 and -07 have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).
The percent recoveries for several compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

Batch BAE0901:
The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Batch BAE0918:
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Chlorodibromomethane	ND	U	0.000369	0.00300	mg/kg	1	5/19/23 19:26	

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for seven (7) samples collected on May 17, 2023 by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270E-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500CN-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Certain poor responding soil SVOC results were rejected due to major recovery issues associated with matrix spike/matrix spike duplicates. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial calibration, continuing calibration, surrogates, matrix spike/matrix spike duplicates, and laboratory control samples.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.
- Sample FB-20230517 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	All Soil Samples	1,1,2-Trichloroethane 2-Butanone Acetone Bromomethane Chloromethane Cis-1,3-dichloropropene Tetrachloroethene Trans-1,2-dichloroethene Trans-1,3-dichloropropene	%R > CL	J (Detects) No Action (NDs)	6H
8260D	FB_20230517	Bromomethane	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on sample(s) associated with this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260E	TB-20240517	1,2,4-Trimethylbenzene	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q
	FB-20230517	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q
		1,2,3-Trichlorobenzene	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q
	All Soil Samples	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q
		Methyl Acetate 1,2,3-Trichlorobenzene	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB_20230517	Methylene Chloride Toluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		1,2,4-Trichlorobenzene 4-Methyl-2-Pentanone Chloromethane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	All Soil Samples	2-Butanone 2-Hexanone Acetone Bromomethane Chloromethane Cyclohexane Trans-1,2-Dichloroethene Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		1,2-Dibromo-3-chloropropane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	FB_20230517	Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		2-Hexanone Bromomethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, J, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270E-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exceptions:
  - The field blank associated with soil samples had a detection of bis(2-ethylhexyl)phthalate (0.510 ug/L) and TIC detections of 1-methyl-cyclopentanecarboxylic acid (4.94 ug/L), 1,1,2,2-tetrachloroethane (5.08 ug/L), and unknowns (4.13 ug/L). Associated sample non-detections are not qualified. TICs are not qualified from a field blank, therefore; no qualification is required.
  - The method blank [BAE0995-BLK-1] associated with soil samples via 8270E had TIC detections of Propanedioic acid, dimethyl-, diethyl es (0.439 mg/kg) and unknowns (0.301 mg/kg). TICs are not qualified unless the TICs identified in the associated samples are qualified by the lab with a 'B' qualifier. None of the TICs had a 'B' qualifier, therefore; no qualification is necessary.
  - The method blank [WG1782800-1] associated with soil samples via 8270E-SIM had detections of Naphthalene (2.98 ug/kg) and C1-Naphthalenes (0.393 ug/kg). Sample detections greater than five times the method blank detections are not qualified.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	FB-20230517	Phenol-d6 (PHN-D6)	%R < CL	None; Qualification not warranted as only one of the six surrogates was outside control limits.	---

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	All soils samples	2,4-Dimethylphenol 2,6-Dinitrotoluene Dimethylphthalate	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was performed on sample OH-SB-14-1.0-2.0_20230517 [23E0866-01]. Percent recoveries were within control limits except for the analytes presented in the following table:

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	OH-SB-14-1.0-2.0_20230517	Butylbenzylphthalate	%R > CL	J (Detects) No action (NDs)	4H
8270E	OH-SB-14-1.0-2.0_20230517	Fluoranthene Pyrene Benzo(g,h,i)perylene	%R < CL	J (Detects) UJ (NDs)	4L
8270E	OH-SB-14-1.0-2.0_20230517	3,3'-Dichlorobenzidine 4,6-Dinitro-2-methylphenol Hexachlorocyclopentadiene 2,4-Dinitrophenol	%R < 10%	R (Detects and NDs)	4L
8270E	OH-SB-14-1.0-2.0_20230517	2,4-Dinitrophenol 3,3'-Dichlorobenzidine Atrazine	%RPD > CL	J (Detects) No action (NDs)	5

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230517	Benzaldehyde	%RSD >20% and Correlation Coefficient <0.99	J (Detects) UJ (ND)	Q
8270E	All Soil Samples	2,4-Dinitrophenol	RRF < 0.05	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB_20230517	4-nitrophenol Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	All soil samples	Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		2-Nitroaniline 4-chloro-3-methylphenol Nitrobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E-SIM	OH-SB-14-1.0-2.0_20230517 [01] OH-SB-19-3.5-4.5_20230517 [03] OH-SB-19-5.5-6.5_20230517 [04] OH-SB-18-3.5-4.5_20230517 [05]	Acenaphthylene Acenaphthene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, J, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	FB_20230517	Decachlorobiphenyl (DCB) – Columns 1 & 2	%R < CL	J (Detects) UJ (NDs)	3L
8081B	OH-SB-14-1.0-2.0_ 20230517 [01] OH-SB-14-7.7-8.7_ 20230517 [02] OH-SB-18-3.5-4.5_ 20230517 [07]	Decachlorobiphenyl (DCB) – Column 2	%R > CL	J (Detects) No Action (NDs) *Only affects detections reported from Column 2*	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB_20230517	4,4'-DDT	%R < CL	J (Detects) UJ (NDs)	6L
8081B	All Soil Samples	4,4'-DDD 4,4'-DDE Alpha-BHC Beta-BHC Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception:

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
200.7	FB_20230517	Silver	%R < CL	UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was not performed on samples evaluated in this report.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Method 200.7
The percent recovery for Silver was outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23E0866-01, -03 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Samples 23E0866-01 has one surrogate (Decachlorobiphenyl) outside of the QC limits (low), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]
Samples 23E0866-01, -02 and -07 have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike (low).
The percent recoveries for several compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).

Sample 23E0866-06 (TB) has one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 23, 2023: The Client IDs were amended on L2327930-01 through -05.

Report Submission

June 16, 2023: This final report includes the results of all requested analyses.

June 02, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Alkylated PAHs

The WG1782800-1 Method Blank, associated with L2327930-01, -02D, -03, -04, and -05, has a concentration above the reporting limit for Naphthalene. Since the associated sample concentrations are either greater than 10x the blank concentration or non-detect to the RL for this target analyte, no corrective action is required. Any results detected below the reporting limit are qualified with a "B".

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Report Date: 10/23/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL	- Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EMPC	- Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LOD	- Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
LOQ	- Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.) Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NDPA/DPA	- N-Nitrosodiphenylamine/Diphenylamine.
NI	- Not Ignitable.
NP	- Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.
NR	- No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.
STLP	- Semi-dynamic Tank Leaching Procedure per EPA Method 1315.
TEF	- Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.
TEQ	- Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.
TIC	- Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD

	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Data validation was performed on the analytical data for ten (10) samples collected May 18, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, surrogates, lab duplicates, serial dilution, matrix spike samples, laboratory control samples and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- The depth interval was logged in incorrectly and updated in the database and data validation report for the following Sample ID: “OH-SB-23-7.5-8.3-20230518” was updated to “OH-SB-23-7.3-8.3-20230518.”
- Sample FB-20230518 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	FB-20230518 TB-20230518	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230518 TB-20230518	Bromomethane	10% < %R < CL	J (Detects) UJ (NDs)	6L
	OH-SB-18-5.0-6.0-20230518 OH-SB-17-1.5-2.5-20230518 OH-SB-17-10.8-11.8-20230518 OH-SB-23-7.3-8.3-20230518 OH-SB-23-14.8-15.8-20230518	Cyclohexane	%R > CL	J (Detects) No action (NDs)	6H
	OH-SB-23-1.0-2.0-20230518 OH-SB-29-1.5-2.5-20230518 DUP-20230518	Benzene Carbon disulfide	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-18-5.0-6.0-20230518	1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	4L
		Chlorobenzene m+p-Xylenes Methyl Acetate o-Xylene	%R > CL	J (Detects) No action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230518 is the sample duplicate for OH-SB-23-1.0-2.0-20230518. All RPDs were within control limits.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce

quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230518 TB-20230518	1,2,3-Trichlorobenzene Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	OH-SB-18-5.0-6.0-20230518 OH-SB-17-1.5-2.5-20230518 OH-SB-17-10.8-11.8-20230518 OH-SB-23-7.3-8.3-20230518 OH-SB-23-14.8-15.8-20230518	Cyclohexane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	OH-SB-23-1.0-2.0-20230518 OH-SB-29-1.5-2.5-20230518 DUP-20230518	2-Hexanone Acetone Cyclohexane Methyl acetate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester and 4-hydroxy-4-methyl-2-Pentanone. Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates associated with the original (undiluted) analyses exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	OH-SB-18-5.0-6.0-20230518	2,4-Dimethylphenol 2,6-Dinitrotoluene Dimethylphthalate	%R > CL	J (Detects) No action (NDs)	6H
	OH-SB-17-1.5-2.5-20230518 OH-SB-17-10.8-11.8-20230518 OH-SB-23-1.0-2.0-20230518 OH-SB-23-7.3-8.3-20230518 OH-SB-23-14.8-15.8-20230518 OH-SB-29-1.5-2.5-20230518 DUP-20230518	Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230518 is the sample duplicate for OH-SB-23-1.0-2.0-20230518. RPDs were outside control limits for the following analytes: Benzyl butyl phthalate, Benzo (e) Pyrene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(j,k)fluoranthenes, C1-Chrysenes, C1-Fluoranthenes/pyrene, C2-Chrysenes, C2-Fluorenes, C2-Phenanthrenes/Anthracenes, C3-Chrysenes, C3-Phenanthrenes/Anthracenes, C4-Naphthalenes, C4-Phenanthrenes/Anthracenes, Dibenz(a,h) & (a,c)anthracene, Fluorene, Perylene and Pyrene. Parent and duplicate concentrations for associated analytes are qualified as estimated, J, reason code 8. Elevated RPDs may be due to homogeneity issues inherent to soil sample matrix.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a

correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230518	4-Nitrophenol Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	OH-SB-18-5.0-6.0-20230518	2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-17-1.5-2.5-20230518 OH-SB-17-10.8-11.8-20230518 OH-SB-23-1.0-2.0-20230518 OH-SB-23-7.3-8.3-20230518 OH-SB-23-14.8-15.8-20230518 OH-SB-29-1.5-2.5-20230518 DUP-20230518	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde Bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-SIM	OH-SB-18-5.0-6.0-20230518 OH-SB-17-1.5-2.5-20230518	Benzo(g,h,i)perylene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-23-1.0-2.0-20230518	DCB (1C)	%R > CL	J (Detects) No action (NDs)	3H
8151A	OH-SB-18-5.0-6.0-20230518 OH-SB-17-1.5-2.5-20230518	2,4-DCAA	10% < %R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-23-14.8-15.8-20230518	2,4-DCAA	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-17-1.5-2.5-20230518 OH-SB-29-1.5-2.5-20230518 DUP-20230518	DCB (2C)	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230518	4,4'-DDT	10% < %R < CL	J (Detects) UJ (NDs)	6L
	OH-SB-18-5.0-6.0-20230518 OH-SB-17-1.5-2.5-20230518 OH-SB-17-10.8-11.8-20230518 OH-SB-23-1.0-2.0-20230518 OH-SB-23-7.3-8.3-20230518 OH-SB-23-14.8-15.8-20230518 OH-SB-29-1.5-2.5-20230518	4,4'-DDD 4,4'-DDE alpha-BHC beta-BHC Endosulfan sulfate	10% < %R < CL	J (Detects) UJ (NDs)	6L
	DUP-20230518	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	OH-SB-18-5.0-6.0-20230518	2,4-D	> CL	J (Detects) No Action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230518 is the sample duplicate for OH-SB-23-1.0-2.0-20230518. RPDs were outside control limits for the following analytes: 4,4'-DDT, Aroclor 1260 and Total PCBs. Parent and duplicate concentrations for associated analytes are qualified as estimated, J, reason code 8.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- The sample FB-20230518 had low-level detections for calcium and sodium; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230518	Calcium	20% < %R < CL	J (Detects) UJ (NDs)	4L
		Thallium	20% < %R < CL	J (Detects) UJ (NDs)	4L

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis performed on sample FB-20230518 exhibited RPD for Sodium above control limits. Associated sample detections are qualified as estimated, J, reason code D.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis performed on sample FB-20230518 exhibited RPD for Sodium above control limits. Associated sample detections are qualified as estimated, J, reason code AA.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230518 is the sample duplicate for OH-SB-23-1.0-2.0-20230518. RPDs were outside control limits for the following analytes: Silver, Zinc and Cyanide. Parent and duplicate concentrations for associated analytes are qualified as estimated, J, reason code 8.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

[a]Results in red text and italics were below reporting limits. Values are reporting limits for comparison purposes only.

[b]**Relative Percent Difference (RPD)** is a quantitative indicator of quality assurance and quality control (QA/QC) for repeated measurements (i.e. duplicates) where the outcome is expected to be the same. It is calculated using the following equation:

$$RPD = \left| \frac{x_1 - x_2}{(x_1 + x_2)/2} \right| \times 100$$

[c]When both results are greater than 5X the Reporting Limit (RL) the RPD is calculated. If either result is below 5X the RL, the absolute difference between the two results is compared to 4X the RL.

COMMENTS/SPECIAL INSTRUCTIONS

Cooler Temp. upon receipt at lab 3.0

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recoveries for several metals were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).
The blank spikes met all QC criteria.

Method 200.7
The percent recovery for Thallium was outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Some of the samples have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Some of the samples have surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Some of the samples have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low and high).

Sample 23E0932-03RE1 (dil) has surrogates outside of the QC limits (low), due to matrix interference.
Sample 23E0932-07 (FB) and -10 (TB) have one surrogate (4-Bromofluorobenzene) outside of the QC limits (slightly low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).
The blank spikes met all QC criteria.

Samples 23E0932-03RE1 (dil) and 23E0932-06RE1 (dil) have surrogates outside of the QC limits (high), due to matrix interferences.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

SW 846 8260D - Volatile Organics - GC/MS - VO+15 - TIC

Tentitively Identified Compound	Est Conc	RT	Qual	Units	Dilution	Analyzed
No TICs Found			U			

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for seven (7) samples collected May 19,2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, surrogates, laboratory control samples and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Sample FB-20230519 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.
- Per the chain of custody, sample 23E1015-04 (logged in at APL Lab as OH-SB-28-005-105-20230519) was revised in the DV Report and database to OH-SB-28-0.5-1.5-20230519.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	FB-20230519 TB-20230519	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	Cyclohexane	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	Cyclohexane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	FB-20230519 TB-20230519	Chloromethane Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.97). Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230519	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Nitrophenol Benzaldehyde Bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol Benzaldehyde Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.
-

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8151A	OH-SB-27-1.0-2.0-20230519	2,4-DCAA	10% < %R < CL	J (Detects) UJ (NDs)	3L
	FB-20230519	2,4-DCAA	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-28-15.0-16.0-20230519	TCMX	10% < %R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519	DCB	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

-

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
	FB-20230519	Aldrin alpha-Chlordane Chlordane Endosulfan sulfate Endrin gamma-Chlordane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS and/or MSD analysis performed on sample OH-SB-29-10-0-11.0-20230519 for PCBs exhibited acceptable recoveries and RPDs.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	0H-SB-29-10-0-11.0-20230519 0H-SB-27-1.0-2.0-20230519 0H-SB-27-10.0-11.0-20230519 0H-SB-28-0.5-1.5-20230519 0H-SB-28-15.0-16.0-20230519	2,4,5-TP (Silvex)	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8081A	0H-SB-28-15.0-16.0-20230519	Methoxychlor			

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	OH-SB-29-10-0-11.0-20230519 OH-SB-27-1.0-2.0-20230519 OH-SB-27-10.0-11.0-20230519 OH-SB-28-0.5-1.5-20230519 OH-SB-28-15.0-16.0-20230519	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spikes (slightly low).
The percent recoveries for several metals were outside of the QC limits for the matrix spikes and matrix spike duplicates (low and high).

Method 200.7
The percent recovery for Silver was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all criteria.

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Samples 23E1015-02, -03 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PCBs [8082A]

Samples 23E1015-01, -02 and -04 have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]

Samples 23E1015-02, -03, -04 and -05 have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

Samples 23E1015-06 (FB) and -07 (TB) have one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Positive Results Only Summary

2,4,6-Trichlorophenol	ND	U	0.0181	0.289	mg/kg	2	5/30/23 17:40

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for seven (7) samples collected May 22, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs and TAL Metals were listed on the COC for FB-20230522 but these analyses were not reported for this sample.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	FB-20230522 TB-20230522	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230522	Bromomethane	10% < %R < CL	J (Detects) UJ (NDs)	6L
	0H-SB-25-1.0-2.0-20230522 0H-SB-25-5.7-6.7-20230522 0H-SB-31-2.5-3.5-20230522 0H-SB-31-6.1-7.1-20230522 0H-SB-21-0.5-1.5-20230522	Cyclohexane	> CL	J (Detects) No action (NDs)	6H

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
	TB-20230522	Methylene chloride	> CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-25-1.0-2.0-20230522 OH-SB-25-5.7-6.7-20230522 OH-SB-31-2.5-3.5-20230522 OH-SB-31-6.1-7.1-20230522 OH-SB-21-0.5-1.5-20230522	Cyclohexane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	TB-20230522	1,2,4-Trichlorobenzene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	FB-20230522	4-Methyl-2-pentanone Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.98). Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	OH-SB-25-1.0-2.0-20230522	2-Fluorobiphenyl p-Terphenyl-d14	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230522	4-Nitrophenol Benzaldehyde bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Dibenzo(a,h)anthracene Hexachlorobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	OH-SB-31-2.5-3.5-20230522 OH-SB-31-6.1-7.1-20230522 OH-SB-21-0.5-1.5-20230522	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-25-1.0-2.0-20230522 OH-SB-25-5.7-6.7-20230522	2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- SVOC C2-Fluorenes associated with OH-SB-25-5.7-6.7-20230522 was qualified "G" which indicates an interference. This result was qualified as estimated, reason code, I.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-21-0.5-1.5-20230522	DCB (1C)	10% < %R < CL	J (Detects) UJ (NDs)	3L
8081B	OH-SB-25-1.0-2.0-20230522 OH-SB-21-0.5-1.5-20230522	DCB (2C)	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230522	4,4'-DDT alpha-Chlordane Chlordane Endosulfan sulfate Endrin gamma-Chlordane	10% < %R < CL	J (Detects) UJ (NDs)	6L
	0H-SB-25-1.0-2.0-20230522 0H-SB-25-5.7-6.7-20230522 0H-SB-31-2.5-3.5-20230522 0H-SB-31-6.1-7.1-20230522 0H-SB-21-0.5-1.5-20230522	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	OH-SB-25-1.0-2.0-20230522 OH-SB-25-5.7-6.7-20230522 OH-SB-31-2.5-3.5-20230522 OH-SB-31-6.1-7.1-20230522	Silvex (2,4,5-TP)	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-21-0.5-1.5-20230522	2,4-D	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
8081B	OH-SB-25-1.0-2.0-20230522 OH-SB-31-2.5-3.5-20230522	Methoxychlor	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
200.7	FB-20230522	Aluminum Calcium	> CL	J (Detects) No action (NDs)	6H
	OH-SB-25-1.0-2.0-20230522 OH-SB-25-5.7-6.7-20230522 OH-SB-31-2.5-3.5-20230522 OH-SB-31-6.1-7.1-20230522 OH-SB-21-0.5-1.5-20230522	Silver	30% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spikes (slightly low).
The percent recoveries for some metals were outside of the QC limits for the matrix spikes and matrix spike duplicates (low and high).

Method 200.7
The percent recovery for Silver was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]

Samples 23E1057-02 and -04 have one surrogate (DCAA-2) outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PCBs [8082A]

Sample 23E1057-02 has one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interference.
Sample 23E1057-07 has one surrogate (Decachlorobiphenyl) outside of the QC limits (low), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

Samples 23E1057 -02, -04 and -07 have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spikes and matrix spike duplicates (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike (low).

Sample 23E1057-06 (TB) has one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 2,4-Dinitrophenol and 3,3'-Dichlorobenzidine were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Sample 23E1057-01 has two surrogates (2-Fluorobiphenyl, p-Terphenyl-d14) outside of the QC limits (low), due to matrix interference.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Carbon disulfide	ND	U	0.000493	0.00344	mg/kg	1	5/27/23 10:03
Carbon Tetrachloride	ND	U	0.000517	0.00344	mg/kg	1	5/27/23 10:03

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

TB-20230523	23E1095-05	5/23/2023	Water

Data validation was performed on the analytical data for five (5) samples collected May 23, 2023 by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Sample FB-20230523 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- The method blank had a low-level detection for methylene chloride; however, all associated sample results were non-detect and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries. except for analytes presented in the following table.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When

both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	0H-SB-22-2.0-3.0-20230523 0H-SB-22-6.4-7.4-20230523	Chloromethane Dichlorodifluoromethane Vinyl chloride	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	FB-20230523 TB-20230523	1,1,1-Trichloroethane Bromoform Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		2-Hexanone Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	0H-SB-21-6.0-7.0-20230523	Bromomethane Chloroethane Chloromethane Cyclohexane Dichlorodifluoromethane Vinyl chloride	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.98). Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	OH-SB-22-6.4-7.4-20230523	2,4,6-Tribromophenol	> CL	J (Detects) No Action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270D-SIM	0H-SB-21-6.0-7.0-20230523 0H-SB-22-6.4-7.4-20230523	Acenaphthylene Benzo(a)anthracene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	0H-SB-22-2.0-3.0-20230523	Naphthalene Phenanthrene Benzo(a)anthracene Benzo(b)fluoranthene Indeno(1,2,3-cd)perylene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	0H-SB-21-6.0-7.0-20230523 0H-SB-22-2.0-3.0-20230523	Benzaldehyde Bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene Hexachlorobutadiene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	0H-SB-22-6.4-7.4-20230523	2,4-Dinitrophenol 2,4-Dinitrotoluene 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenz(a,h)anthracene Indeno(1,2,3-cd)perylene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-22-6.4-7.4-20230523	TCMX	%R > CL	J (Detects) No action (NDs)	3H
8081	OH-SB-21-6.0-7.0-20230523	DCB (2C)	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	OH-SB-21-6.0-7.0-20230523 OH-SB-22-2.0-3.0-20230523 OH-SB-22-6.4-7.4-20230523	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
		4,4'-DDT Methoxychlor	> CL	J (Detects) No action (NDs)	6H
	FB-20230523	4,4'-DDT alpha-Chlordane Chlordane Endosulfan sulfate Endrin gamma-Chlordane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081A	OH-SB-22-2.0-3.0-20230523 OH-SB-22-6.4-7.4-20230523	Methoxychlor	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- The field blank FB-20230523 had low-level detections for sodium; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	0H-SB-21-6.0-7.0-20230523 0H-SB-22-2.0-3.0-20230523 0H-SB-22-6.4-7.4-20230523	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Methods 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
Sample 23E1095-03 has two surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]
Samples 23E1095-01 and -02 have one surrogate (Decachlorobiphenyl [2C]) outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 2,4-Dinitrophenol and 3,3'-Dichlorobenzidine were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Samples 23E1095-03, -03RE1 (1:100) and -03RE2 (1:500) have surrogates outside of the QC limits (low and high), due to matrix interferences.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)
