ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2329464 and 23E1202
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: March 20, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
OH-SB-22-46.0-47.0-20230524	23E1202-01	5/24/2023	Soil
FB-20230524	23E1202-02	5/24/2023	Water
OH-SB-16-3.0-4.0-20230524	23E1202-03	5/24/2023	Soil
TB-20230524	23E1202-04	5/24/2023	Water

Data validation was performed on the analytical data for four (4) samples collected May 24, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOC 3,3'-dichlorobenzidine associated with sample OH-SB-22-46.0-47.0-20230524 was qualified as rejected due to low matrix spike recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, matrix spike samples and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230524 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- The method blank had a low-level detection for methylene chloride; however, all associated sample results were non-detect and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	OH-SB-22-46.0-47.0-20230524	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230524 TB-20230524	Bromomethane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230524 TB-20230524	1,1,1-Trichloroethane Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		1,2,3-Trichlorobenzene	CCV %D > 20%	UJ (NDs)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		2-Butanone 2-Hexanone 4-Methyl-2-pentanone Bromomethane	(decrease in response)	J (Detects)	
	OH-SB-22-46.0-47.0-20230524 OH-SB-16-3.0-4.0-20230524	1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2-Dichlorobenzene 1,4-Dichlorobenzene Chlorobenzene Cyclohexane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Dichlorodifluoromethane Methylene Chloride	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.98). Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Due to the presence of high concentration target analytes, the laboratory indicated surrogates were diluted outside the calibration range for sample OH-SB-16-3.0-4.0-20230524. Associated sample detections are qualified as estimated, J, and non-detections are qualified as estimated with limited detection, UJ, reason code 3.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	0H-SB-22-46.0-47.0-20230524	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol	> CL	J (Detects) UJ (NDs)	4H
		3,3'-Dichlorobenzidine	10% > %R < CL	J (Detects) R (NDs)	4L

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230524	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Nitrophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene Hexachlorobutadiene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	0H-SB-16-3.0-4.0-20230524	2-Methylphenol 4-Chloro-3-methylphenol 4-Nitrophenol bis(2-chloroisopropyl)ether Hexachloroethane Nitrobenzene n-Nitroso-di-n-propylamine	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	0H-SB-22-46.0-47.0-20230524	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-16-3.0-4.0-20230524	TCMX	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-22-46.0-47.0-20230524	TCMX	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-16-3.0-4.0-20230524	TCMX and DCB	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	OH-SB-22-46.0-47.0-20230524 OH-SB-16-3.0-4.0-20230524 OH-SB-22-46.0-47.0-20230524 OH-SB-16-3.0-4.0-20230524	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
		4,4'-DDT Methoxychlor	> CL	J (Detects) No action (NDs)	6H
	FB-20230524	4,4'-DDT alpha-Chlordane Chlordane Endosulfan sulfate Endrin gamma-Chlordane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis performed on sample OH-SB-22-46.0-47.0-20230524 for herbicides exhibited acceptable recoveries and RPDs.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230524	Selenium	> CL	J (Detects) UJ (NDs)	6H
	0H-SB-22-46.0-47.0-20230524 0H-SB-16-3.0-4.0-20230524	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
7473	OH-SB-22-46.0-47.0-20230524	Mercury	20% < %R < CL	J (Detects) UJ (NDs)	4L

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis performed for mercury on a sample OH-SB-22-46.0-47.0-20230524 exhibited acceptable RPD.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 7473:
The percent recovery for Mercury was outside of the QC limits for the matrix spike duplicate (slightly low). The blank spike met all QC criteria.

Methods 200.7 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
Sample 23E1202-03 has surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E1202-01 and -03 have surrogates outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).

Samples 23E1202-01, -01RE1 and -01RE2 have surrogates outside of the QC limits (low), due to matrix interferences.
Sample 23E1202-01 has one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Samples 23E1202-03, -03RE1 and -03RE2 have surrogate outside of the QC limits (low and high), due to matrix interferences.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

OH-SB-16A-46.0-47.0-20230525	23E1236-04	5/25/2023	Soil
TB-20230525	23E1236-05	5/25/2023	Water

Data validation was performed on the analytical data for (5) samples collected May 25, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOCs 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dichlorobenzene and 1,4-Dichlorobenzene associated with sample OH-SB-16A-46.0-47.0-20230525 were qualified as rejected due to low internal standard recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, internal standards, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230525 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	FB-20230525 TB-20230525	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-16A-46.0-47.0-20230525	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-16A-46.0-47.0-20230525 RE1 OH-SB-16A-46.0-47.0-20230525 RE2	4-Bromofluorobenzene Dibromofluoromethane Toluene-d8	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230525 TB-20230525	Acetone	> CL	J (Detects) No Action (NDs)	6H
		Chloroform			
		Vinyl chloride			
		1,2_Dichloroethane			

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Internal Standard	Exceedance	Qualification	Reason Code
8260D	OH-SB-16A-46.0-47.0-20230525	1,4-Dichlorobenzene-d4	%R < 10%	J (Detects) R (NDs)	X

- Associated compounds (1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and 1,2-Dibromo-3-chloropropane) are qualified as rejected due to internal standard recovery.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a

correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230525 TB-20230525	1,1,1-Trichloroethane 1,2-Dichloroethane Bromodichloromethane Carbon tetrachloride Chloroform Dichlorodifluoromethane Trichlorofluoromethane Vinyl chloride	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		1,2,4-Trichlorobenzene	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-9.5-10.5-20230525 OH-SB-16A-46.0-47.0-20230525	Chloromethane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.98). Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-46.0-47.0-20230525	2,4,6-Tribromophenol	> CL	J (Detects) No Action (NDs)	3H
	OH-SB-16A-9.5-10.5-20230525	2-Fluorophenol Phenol-d6	> CL	J (Detects) No Action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde and 2-nitrophenol which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230525	4,6-Dinitro-2-methylphenol 2,4-Dinitrophenol 4-Nitrophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-9.5-10.5-20230525	2-Methylphenol 4-Chloro-3-methylphenol bis(2-chloroisopropyl)ether Hexachloroethane Nitrobenzene n-Nitroso-di-n-propylamine	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-16A-46.0-47.0-20230525	2-Chlorophenol 2-Methylphenol 4-Nitrophenol bis(2-chloroisopropyl)ether bis(2-ethylhexyl)phthalate Hexachloroethane n-Nitroso-di-n-propylamine Phenol	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine Benzo(g,h,i)perylene Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-16A-1.0-2.0-20230525	DCB	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-16A-46.0-47.0-20230525	TCMX	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-16A-1.0-2.0-20230525	DCB	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230525	Endosulfan sulfate Endrin	10% < %R < CL	J (Detects) UJ (NDs)	6L
		Endrin aldehyde Methoxychlor	> CL	J (Detects) No action (NDs)	6H
	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-9.5-10.5-20230525 OH-SB-16A-46.0-47.0-20230525	Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L
		Methoxychlor	> CL	J (Detects) No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis performed on sample OH-SB-16A-1.0-2.0-20230525 for PCBs exhibited acceptable recoveries and RPDs.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-9.5-10.5-20230525 OH-SB-16A-46.0-47.0-20230525	Methoxychlor	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	OH-SB-16A-1.0-2.0-20230525 OH-SB-16A-9.5-10.5-20230525 OH-SB-16A-46.0-47.0-20230525	Silver	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- The MS/MSD analysis performed on sample OH-SB-16A-1.0-2.0-20230525 for cyanide exhibited acceptable recoveries and RPDs.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis performed for cyanide on a sample OH-SB-16A-1.0-2.0-20230525 exhibited acceptable RPD.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (low).
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.7
The percent recovery for Calcium was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Method 7473:
The percent recovery for Mercury was outside of the QC limits for the matrix spike duplicate (slightly low). The blank spike met all QC criteria.

Methods 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
Samples 23E1236-01 and -04 have surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E1236-01, -02 and -04 have surrogates outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

Sample 23E1236-04, -04RE1 and -04RE2 have surrogates outside of the QC limits (low), due to matrix interferences.
Sample 23E1236-04 has no internal standard area response for (1,4-Dichlorobenzene-d4), due to matrix interference.
Samples 23E1236-03 (FB) and -05 (TB) have one surrogate (4-Bromofluorobenzene) outside of the QC limits (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Some of the samples and their dilutions have surrogates outside of the QC limits (low and high), due to matrix interferences.

TIC_Benzene, 1,3,5-trimethyl-(01)	0.198	J			mg/kg dry	1	6/7/23 17:32

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2330357 and 23E1405
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: April 12, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
OH-SB-12-0.5-1.5-20230531	23E1405-01	5/31/2023	Soil
OH-SB-12A-1.5-2.5-20230531	23E1405-02	5/31/2023	Soil
OH-SB-24-5.0-6.0-20230531	23E1405-03	5/31/2023	Soil
FB-20230531	23E1405-04	5/31/2023	Water
DUP-20230531	23E1405-05	5/31/2023	Soil
TB-20230531	23E1405-06	5/31/2023	Water

Data validation was performed on the analytical data for six (6) samples collected May 31 by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, matrix spike samples and field duplicates.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230531 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with OH-SB-24-5.0-6.0-20230531 and DUP-20240531 [23E1405-03,04] exhibited a detection for Methylene Chloride (0.0165 ug/L). Associated sample non-detections are not qualified.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20240531 TB-20240531	Bromomethane 1,1,2,2-Tetrachloroethane	%R < CL	J (Detects) UJ (NDs)	6L
	OH-SB-24-5.0-6.0-20230531 23E1405-03 DUP-20240531	Methylene Chloride	%R > CL	J (Detects) No Action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was performed on sample OH-SB-24-5.0-6.0-20230531 [23E1405-03] in this SDG. All recoveries were within acceptable ranges except the following identified in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	OH-SB-24-5.0-6.0-20230531 [23E1405-03]	1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2-Dichlorobenzene 1,4-Dichlorobenzene	%R < CL	J (Detects) UJ (NDs)	4L
		Acetone	%R > CL	J (Detects) No Action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicate, DUP-20240531 [23E1405-05], is the duplicate for sample OH-SB-12-0.5-1.5-20230531 [23E1405-01]. All RPDs exhibited acceptable RPDs.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except those listed in the table below.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20240531 [23E1405-04] TB-20240531 [23E1405-06]	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q
		1,2,3-Trichlorobenzene	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q
	OH-SB-12-0.5-1.5-20230531 [23E1405-01] OH-SB-12A-1.5-2.5-20230531 [23E1405-02] OH-SB-24-5.0-6.0-20230531 [23E1405-03] DUP-20230531 [23E1405-05]	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q
		Bromochloromethane	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-24-5.0-6.0-20230531 [23E1405-03] DUP-20230531 [23E1405-05]	2-Butanone 2-Hexanone Acetone Methylene Chloride	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	FB-20240531 [23E1405-04] TB-20240531 [23E1405-06]	Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		4-Methyl-2-pentanone Bromomethane Methyl Acetate	CCV %D > 20% (decrease in response)	J (Detects) UJ (NDs)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, J, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank (BAF0337-BLK1) associated with all soil samples [23E1405-01,-02,-03,-05] exhibited TIC detections for Hexadecanoic acid, 1,1-dimethylethyl est (3.33), Octadecanoic acid, butyl ester (1.72), and unknown (0.416). TICs identified in the associated samples and qualified by the lab with a 'B' qualifier are qualified based on the following: TIC detections less than five times the method blank detection are qualified as rejected, reason code 2. TIC detections greater than five times the method blank detection are not qualified. The following TICs were qualified in this SDG:

Sample	TIC
OH-SB-24-5.0-6.0-20230531 [23E1405-03]	Hexadecanoic acid, 1,1-dimethylethyl est

- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8270E	OH-SB-24-5.0-6.0-20230531 [23E1405-03]	Nitrobenzene-d5	%R < 10%	None; Qualification not warranted as only one of the six surrogates was outside control limits.	---

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	All Soil Samples [23E1405-01,-02,-03,-05]	2,4-Dimethylphenol 2-Methylphenol 4-Chloro-3-methylphenol Biphenyl	%R > CL	J (Detects) No Action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicate, DUP-20240531 [23E1405-05], is the duplicate for sample OH-SB-12-0.5-1.5-20230531 [23E1405-01]. All RPDs exhibited acceptable RPDs.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20240531 [23E1405-04]	Benzaldehyde	%RSD >20% & correlation coefficient <0.99	J (Detects) UJ (ND)	Q
	All Soil Samples [23E1405-01,-02,-03,-05]	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol	RRF < 0.05	J (Detects) UJ (ND)	Q
		2-Nitrophenol	%RSD >20% & correlation coefficient <0.99	J (Detects) UJ (ND)	Q
		1,4-Dioxane	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20240531 [23E1405-04]	4-Nitrophenol Benzaldehyde Bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-12-0.5-1.5-20230531 [23E1405-01] OH-SB-24-5.0-6.0-20230531 [23E1405-03] DUP-20230531 [23E1405-05]	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 4,6-Dinitro-2-methylphenol 4-Chloro-3-methylphenol 4-Nitroaniline Bis(2-chloroisopropyl)ether Bis(2-ethylhexyl)phthalate Di-n-octylphthalate n-Nitroso-di-n-propylamine	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine Hexachlorocyclopentadiene Hexachloroethane	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-12A-1.5-2.5-20230531 [23E1405-02] OH-SB-24-5.0-6.0-20230531 [23E1405-03RE1]	2,4-Dinitrophenol Bis(2-ethylhexyl)phthalate Butylbenzylphthalate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine Benzaldehyde Bis(2-chloroethyl)ether Hexachlorocyclopentadiene Pentachlorophenol Phenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, J, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-12-0.5-1.5-20230531 [23E1405-01] DUP-20230531 [23E1405-05]	DCB (Column 1 & 2)	%R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-12A-1.5-2.5-20230531 [23E1405-02]	DCB (Column 1)	%R < CL	J (Detects) UJ (NDs)	3L
		DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-24-5.0-6.0-20230531 [23E1405-03]	DCB (Column 1)	%R < CL	J (Detects) UJ (NDs)	3L
8151A	All Soil Samples [23E1405-01,-02,-03,-05]	DCAA (Column 1 & 2)	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-12A-1.5-2.5-20230531 [23E1405-02]	TCMX (Column 2) DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
	DUP-20230531 [23E1405-05]	DCB (Column 1)	%R < CL	J (Detects) UJ (NDs)	3L

- Where primary and/or secondary column surrogate recoveries were within control limits and sample results are non-detect, no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	All Soil Samples [23E1405-01,-02,-03,-05]	Aroclor-1016	%R < CL	J (Detects) UJ (NDs)	6L
8081B	FB-20240531 [23E1405-04]	Endrin	%R < CL	J (Detects) UJ (NDs)	6L
	All Soil Samples [23E1405-01,-02,-03,-05]	4-4'-DDE Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L
		Methoxychlor	%R > CL	J (Detects) No Action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicate, DUP-20240531 [23E1405-05], is the duplicate for sample OH-SB-12-0.5-1.5-20230531 [23E1405-01]. RPDs were outside control limits for the following analytes: 4,4'-DDE. Parent and duplicate concentrations for associated analytes are qualified as estimated, J, reason code 8.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	OH-SB-12-0.5-1.5-20230531 [23E1405-01]	DCAA (Column 2) 2,4-D (Column 2)	%RSD > 20% & incorrect calibration curve used	J (Detects) UJ (ND)	Q
8081B	FB-20240531 [23E1405-04]	4,4'-DDT (Column 1 & 2) Beta-BHC (Column 2) Dieldrin (Column 2)	%RSD > 20% & incorrect calibration curve used	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151B	OH-SB-12-0.5-1.5-20230531 [23E1405-01]	2,4-D (Column 1)	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH
8081B	FB-20240531 [23E1405-04]	Methoxychlor (Column 1 & 2) 4,4'-DDD (Column 2) 4,4'-DDT (Column 2) Endosulfan sulfate (Column 2)	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination except for the following:
  - The field blank [23E1405-04] has detections of iron (0.281 mg/L) and sodium (7.02 mg/L). Associated sample detections greater than five times the field blank detections are not qualified. Note the field blank and parent samples are mixed matrices (water vs. soil).

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
200.7	FB-20240531 [23E1405-04]	Silver	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicate, DUP-20240531 [23E1405-05], is the duplicate for sample OH-SB-12-0.5-1.5-20230531 [23E1405-01]. RPDs were outside control limits for the following analytes: Chromium, Copper, Magnesium, Nickel, and Iron. Parent and duplicate concentrations for associated analytes are qualified as estimated, J, reason code 8.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
245.1	FB-20240531 [23E1405-04]	Mercury	%R > CL	J (Detects) No Action (NDs)	SH
200.7	FB-20240531 [23E1405-04]	Calcium	%R > CL	J (Detects) No Action (NDs)	SH

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

[a]Results in red text and italics were below reporting limits. Values are reporting limits for comparison purposes only.

[b]**Relative Percent Difference (RPD)** is a quantitative indicator of quality assurance and quality control (QA/QC) for repeated measurements (i.e. duplicates) where the outcome is expected to be the same. It is calculated using the following equation:

$$RPD = \left| \frac{x_1 - x_2}{(x_1 + x_2)/2} \right| \times 100$$

[c]When both results are greater than 5X the Reporting Limit (RL) the RPD is calculated. If either result is below 5X the RL, the absolute difference between the two results is compared to 4X the RL.

LABORATORY DATA VERIFICATION AND VALIDATION

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 200.7
The percent recovery for Silver was outside of the QC limits for the blank spike (low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23E1405-01, -02, -03 and -05 have surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Samples 23E1405-01, -02, -03 and -05 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E1405-02 and -05 have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, blank spike duplicate, matrix spikes and matrix spike duplicates (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

Sample 23E1405-03 has one surrogate (Nitrobenzene-d5) outside of the QC limits (low), due to matrix interference.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 24, 2023: The Client IDs were amended on L2330357-01, -02, -03, and -04.

Report Submission

June 28, 2023: This final report includes the results of all requested analyses.

June 12, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Report Date: 10/24/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Volatile Organics Instruments

Volatile Organics:

Instrument: Agilent 7890 GC/5975C MSD	Columns (length x ID x df):
Trap: Supelco K Trap (VOACARB 3000)	RTX-VMS 20m x 0.18mm x 1um
Concentrator: EST Encon (or equivalent)	RTX-VMS 30m x 0.25mm x 1.4um
Autosampler: EST Centurion (or equivalent)	RTX-502.2 40m x 0.18mm x 1um
Purge time: 11 min	

Volatile Organics: VPH

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD

	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2330491 and 23E1291
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: April 4, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
OH-SB-24-2.5-3.5-20230526	23E1291-01	5/26/2023	Soil
OH-SB-24-5.5-6.5-20230526	23E1291-02	5/26/2023	Soil
FB-20230526	23E1291-03	5/26/2023	Water
OH-SB-24-34.5-35.5-20230526	23E1291-04	5/26/2023	Soil
TB-20230526	23E1291-05	5/26/2023	Water

Data validation was performed on the analytical data for four (5) samples collected May 26 by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Certain volatiles associated with sample OH-SB-24-34.5-35.5-20230526 was qualified as rejected due to low internal standard recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230526 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	4-Bromofluorobenzene	%R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-34.5-35.5-20230526 [23E1291-04]	1,1-Dichloroethane 1,2-Dichloropropane Benzene Chloroform Cis-1,2-Dichloroethene Cyclohexane Toluene Trichloroethene	%R > CL	J (Detects) No Action (NDs)	6H
	OH-SB-24-5.5-6.5-20230526 [23E1291-02]	1,2-Dichlorobenzene 1,4-Dichlorobenzene Chlorobenzene Cyclohexane Isopropylbenzene o-Xylene	%R > CL	J (Detects) No Action (NDs)	6H
	OH-SB-24-34.5-35.5-20230526 [23E1291-04RE]	1,2,4-Trichlorobenzene	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code	Affected Analytes
8260D	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	1,4-Dichlorobenzene-d4 (DCB-D4)	Area < CL & Area < 20%	J (Detects) R (NDs)	X	1,4-Dichlorobenzene 1,2,-Dichlorobenzene 1,2-Dibromo-3-chloropropane 1,2,4-Trichlorobenzene 1,2,3-Trichlorobenzene

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except those listed in the table below.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230526 [23E1291-03] TB-20230526 [23E1291-05]	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q
		1,2,3-Trichlorobenzene	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q
	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-5.5-6.5-20230526 [23E1291-02] OH-SB-24-34.5-35.5-20230526 [23E1291-04]	Tert-Butyl Alcohol	RRF < 0.05	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-34.5-35.5-20230526 [23E1291-04]	1,1-Dichloroethane 2-Hexanone Acetone Benzene Carbon Disulfide Cyclohexane Methyl Acetate	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	FB-20230526 [23E1291-03] TB-20230526 [23E1291-05]	Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		2-Hexanone 4-Methyl-2-pentanone Bromomethane	CCV %D > 20% (decrease in response)	J (Detects) UJ (NDs)	SL
	OH-SB-24-5.5-6.5-20230526 [23E1291-02]	1,1,2,2-Tetrachloroethane 1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2,4-Trimethylbenzene 1,2-Dibromo-3-chloropropane 1,2-Dichlorobenzene 1,4-Dichlorobenzene Chlorobenzene Cyclohexane Ethylbenzene Isopropylbenzene o-Xylene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester (5.18), Octadecanoic acid, butyl ester (3.17), 4-hydroxy-4-methyl-2-Pentanone (19.2) and unknown (0.345). TICs identified in the associated samples and qualified by the lab with a 'B' qualifier are qualified based on the following: TIC detections less than five times the method blank detection are qualified as rejected, reason code 2. The following TICs were qualified in this SDG:

Sample	TIC
OH-SB-24-2.5-3.5-20230526 [23E1291-01]	Hexadecanoic acid, butyl ester
OH-SB-24-5.5-6.5-20230526 [23E1291-02]	Hexadecanoic acid, butyl ester Octadecanoic acid, butyl ester 4-hydroxy-4-methyl-2-Pentanone UNKNOWN
OH-SB-24-34.5-35.5-20230526 [23E1291-04]	4-hydroxy-4-methyl-2-Pentanone

- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

Method	Sample	Surrogate	Exceedance	Affected Analytes	Qualification	Reason Code
8270E	OH-SB-24-2.5-3.5-20230526 [23E1291-01]	2-Fluorophenol (2FP) Phenol-d6 (PHN-D6)	%R>CL	Acid Extractables	J (Detects) No Action (NDs)	3H
	23E1291-04	2,4,6-Tribromophenol	%R>CL	Acid Extractables	None; Qualification not warranted as only one of the six surrogates was outside control limits.	---

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	All Soil Samples	4-Nitroaniline	%R > CL	J (Detects) No Action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.

- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230526 [23E1291-03]	Benzaldehyde	%RSD >20% & correlation coefficient <0.99	J (Detects) UJ (ND)	Q
	0H-SB-24-5.5-6.5-20230526 [23E1291-02] 0H-SB-24-34.5-35.5-20230526 [23E1291-04]	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol	RRF < 0.05	J (Detects) UJ (ND)	Q
	0H-SB-24-2.5-3.5-20230526 [23E1291-01 & -01RE] 0H-SB-24-34.5-35.5-20230526 [23E1291-04RE]	2-Chlorophenol 2,4-Dinitrophenol	RRF < 0.05	J (Detects) UJ (ND)	Q
		2-Nitrophenol	%RSD >20% & correlation coefficient <0.99	J (Detects) UJ (ND)	Q
		1,4-Dioxane	%RSD >20% & supporting information not provided to verify correlation coefficient >0.99	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230526 [23E1291-03]	4-Nitrophenol Benzaldehyde Bis(2-chloroisopropyl)ether	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	0H-SB-24-2.5-3.5-20230526 [23E1291-01]	4-Chloro-3-methylphenol 4-Nitrophenol Bis(2-chloroisopropyl)ether Hexachloroethane Nitrobenzene n-Nitroso-di-n-propylamine	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	0H-SB-24-5.5-6.5-20230526 [23E1291-02] 0H-SB-24-34.5-35.5-20230526 [23E1291-04]	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-24-2.5-3.5-20230526 [23E1291-01]	DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-24-5.5-6.5-20230526 [23E1291-02]	DCB (Column 2)	%R < CL	J (Detects) UJ (NDs)	3L
	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	TCMX (Column 2) DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
8151A	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	DCAA (Column 1 & 2)	%R > CL	J (Detects) No action (NDs)	3H
8081B	OH-SB-24-2.5-3.5-20230526 [23E1291-01]	DCB (Column 1)	%R < CL	J (Detects) UJ (NDs)	3L
		DCB (Column 2)	%R > CL	J (Detects) No action (NDs)	3H
	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	DCB (Column 1 & 2) TCMX (Column 2)	%R > CL	J (Detects) No action (NDs)	3H

- Where primary and/or secondary column surrogate recoveries were within control limits and sample results are non-detect, no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230526 [23E1291-03]	Endosulfan sulfate Endrin	%R < CL	J (Detects) UJ (NDs)	6L
		Endrin aldehyde Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H
	All Soil Samples [23E1291-01, -02, -04]	Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L
		Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B	All Soil Samples [23E1291-01,02,04]	4,4'-DDT (Column 1 & 2) Dieldrin (Column 2)	%RSD > 20% & incorrect calibration curve used	J (Detects) UJ (ND)	Q
8151A	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	DCAA (Column 2) 2,4-D (Column 2)	%RSD > 20% & incorrect calibration curve used	J (Detects) UJ (ND)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151B	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	2,4-D (Column 1)	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH
NJEPH	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-5.5-6.5-20230526 [23E1291-02] OH-SB-24-34.5-35.5-20230526 [23E1291-04RE1]	Total EPH	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH
8081B	FB-20230526 [23E1291-03]	Delta-BHC (Column 2)	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-5.5-6.5-20230526 [23E1291-02]	Methoxychlor (C1 & C2) 4,4'-DDD (C2) 4,4'-DDT (C2) Endosulfan sulfate (C2)	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH
	OH-SB-24-34.5-35.5-20230526 [23E1291-04]	Methoxychlor (C1 & C2) 4,4'-DDD (C2) 4,4'-DDT (C2) Endosulfan sulfate (C2)	CCV %D > 20% (increase in response)	J (detects) No Action (non-detects)	SH

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
200.7	FB-20230526 [23E1291-03]	Antimony	20% < %R < CL	J (Detects) UJ (NDs)	6L
		Selenium Thallium	%R > CL	J (Detects) No Action (NDs)	6H
	OH-SB-24-2.5-3.5-20230526 [23E1291-01] OH-SB-24-5.5-6.5-20230526 [23E1291-02] OH-SB-24-34.5-35.5-20230526 [23E1291-04]	Selenium	20% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Selenium was outside of the QC limits for the blank spike (slightly low).
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.7
The percent recovery for Antimony was outside of the QC limits for the blank spike (slightly low).

Methods 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23E1291-04 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: PCBs [8082A]
Samples 23E1291-01, -02 and -04 have surrogates outside of the QC limits (high and low), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23E1291-01 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Sample 23E1291-04 has one surrogate (4-Bromofluorobenzene) and one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Samples 23E1291-01, -01RE1 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.
Sample 23E1291-04RE1 has surrogates diluted outside of the QC limits.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet NELAP requirements for all NELAP accredited parameters unless otherwise noted in the following narrative. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. Tentatively Identified Compounds (TICs), if requested, are reported for compounds identified to be present and are not part of the method/program Target Compound List, even if only a subset of the TCL are being reported. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. All specific QC information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Revision

October 24, 2023: The Client IDs were amended on L2330491-01, -02, and -03.

Report Submission

June 28, 2023: This final report includes the results of all requested analyses.

June 12, 2023: This is a preliminary report.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Alkylated PAHs

L2330491-03D: The sample has elevated detection limits due to the dilution required by the sample matrix.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Melissa Sturgis Report Date: 10/24/23

Title: Technical Director/Representative

GLOSSARY

Acronyms

DL - Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the limit of quantitation (LOQ). The DL includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EMPC - Estimated Maximum Possible Concentration: The concentration that results from the signal present at the retention time of an analyte when the ions meet all of the identification criteria except the ion abundance ratio criteria. An EMPC is a worst-case estimate of the concentration.

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LOD - Limit of Detection: This value represents the level to which a target analyte can reliably be detected for a specific analyte in a specific matrix by a specific method. The LOD includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

LOQ - Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

Limit of Quantitation: The value at which an instrument can accurately measure an analyte at a specific concentration. The LOQ includes any adjustments from dilutions, concentrations or moisture content, where applicable. (DoD report formats only.)

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available. For Method 332.0, the spike recovery is calculated using the native concentration, including estimated values.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NDPA/DPA - N-Nitrosodiphenylamine/Diphenylamine.

NI - Not Ignitable.

NP - Non-Plastic: Term is utilized for the analysis of Atterberg Limits in soil.

NR - No Results: Term is utilized when 'No Target Compounds Requested' is reported for the analysis of Volatile or Semivolatile Organic TIC only requests.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

STLP - Semi-dynamic Tank Leaching Procedure per EPA Method 1315.

TEF - Toxic Equivalency Factors: The values assigned to each dioxin and furan to evaluate their toxicity relative to 2,3,7,8-TCDD.

TEQ - Toxic Equivalent: The measure of a sample's toxicity derived by multiplying each dioxin and furan by its corresponding TEF and then summing the resulting values.

TIC - Tentatively Identified Compound: A compound that has been identified to be present and is not part of the target compound list (TCL) for the method and/or program. All TICs are qualitatively identified and reported as estimated concentrations.

Report Format: DU Report with 'J' Qualifiers

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Chlordane: The target compound Chlordane (CAS No. 57-74-9) is reported for GC ECD analyses. Per EPA,this compound "refers to a mixture of chlordane isomers, other chlorinated hydrocarbons and numerous other components." (Reference: USEPA Toxicological Review of Chlordane, In Support of Summary Information on the Integrated Risk Information System (IRIS), December 1997.)

Difference: With respect to Total Oxidizable Precursor (TOP) Assay analysis, the difference is defined as the Post-Treatment value minus the Pre-Treatment value.

Final pH: As it pertains to Sample Receipt & Container Information section of the report, Final pH reflects pH of container determined after adjustment at the laboratory, if applicable. If no adjustment required, value reflects Initial pH.

Frozen Date/Time: With respect to Volatile Organics in soil, Frozen Date/Time reflects the date/time at which associated Reagent Water-preserved vials were initially frozen. Note: If frozen date/time is beyond 48 hours from sample collection, value will be reflected in 'bold'.

Gasoline Range Organics (GRO): Gasoline Range Organics (GRO) results include all chromatographic peaks eluting from Methyl tert butyl ether through Naphthalene, with the exception of GRO analysis in support of State of Ohio programs, which includes all chromatographic peaks eluting from Hexane through Dodecane.

Initial pH: As it pertains to Sample Receipt & Container Information section of the report, Initial pH reflects pH of container determined upon receipt, if applicable.

PAH Total: With respect to Alkylated PAH analyses, the 'PAHs, Total' result is defined as the summation of results for all or a subset of the following compounds: Naphthalene, C1-C4 Naphthalenes, 2-Methylnaphthalene, 1-Methylnaphthalene, Biphenyl, Acenaphthylene, Acenaphthene, Fluorene, C1-C3 Fluorenes, Phenanthrene, C1-C4 Phenanthrenes/Anthracenes, Anthracene, Fluoranthene, Pyrene, C1-C4 Fluoranthenes/Pyrenes, Benz(a)anthracene, Chrysene, C1-C4 Chrysenes, Benzo(b)fluoranthene, Benzo(j)+(k)fluoranthene, Benzo(e)pyrene, Benzo(a)pyrene, Perylene, Indeno(1,2,3-cd)pyrene, Dibenz(ah)+(ac)anthracene, Benzo(g,h,i)perylene. If a 'Total' result is requested, the results of its individual components will also be reported.

PFAS Total: With respect to PFAS analyses, the 'PFAS, Total (5)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA and PFOS. In addition, the 'PFAS, Total (6)' result is defined as the summation of results for: PFHpA, PFHxS, PFOA, PFNA, PFDA and PFOS. For MassDEP DW compliance analysis only, the 'PFAS, Total (6)' result is defined as the summation of results at or above the RL. Note: If a 'Total' result is requested, the results of its individual components will also be reported.

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Data Qualifiers

A - Spectra identified as "Aldol Condensates" are byproducts of the extraction/concentration procedures when acetone is introduced in the process.

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit. For NJ-related projects (excluding Air), flag only applies to associated field samples that have detectable concentrations of the analyte, which was detected above the reporting limit in the associated method blank or above five times the reporting limit for common lab contaminants (Phthalates, Acetone, Methylene Chloride, 2-Butanone).

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

F - The ratio of quantifier ion response to qualifier ion response falls outside of the laboratory criteria. Results are considered to be an estimated maximum concentration.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where

Report Format: DU Report with 'J' Qualifiers

Data Qualifiers

the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

V - The surrogate associated with this target analyte has a recovery outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

Z - The batch matrix spike and/or duplicate associated with this target analyte has a recovery/RPD outside the QC acceptance limits. (Applicable to MassDEP DW Compliance samples only.)

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs). For calculated parameters, this represents that one or more values used in the calculation were estimated.

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Instrument: Agilent 6890 (or equivalent)	Column Type: Restek RTX 502.2
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 105 Meters
Concentrator: EST Encon (or equivalent)	df: 3.00 um
Autosampler: EST Centurion (or equivalent)	ID: 0.53mm

Volatile Organics: PIANO

Instrument: Agilent 7890 GC/5975C MSD	Column Type: DB-VRX
Trap: Supelco K Trap (VOACARB 3000)	Column Length: 60 Meters
Concentrator: Tekmar Velocity / EST Encon	df: 1.40 um
Autosampler: Varian Archon / EST Centurion	ID: 0.25 mm
Purge time: 11 min	Desorb: 1 min

Volatile Organics: Dissolved Gas

Instrument: Agilent 7890 (or equivalent) with FID/TCD

	Column Type: Haysep S Column
	Column Length: 2 Meters packed (100/200 mesh)
Autosampler: LEAP Headspace	Purge time: 0.6 min

Volatile Organics in Air Instruments

Volatile Organics in Air:

Instruments: Agilent 6890 GC / 5975 MSD Shimadzu QP2010-SE / QP2020

Concentrator: Entech 7100A or 7200	Column Type: Restek RTX-1
Autosampler: Entech 7016CA or 7016D	Column Length: 60 Meters
	df: 1.00 um
	ID: 0.25 mm or 0.32 mm

Trap 1: Glass Bead: manufacturer-Entech: 20 cm packing material
Trap 2: Tenax: manufacturer-Entech: 20 cm packing material

Semivolatile Organics Instruments - Westborough

Semivolatile Organics (Acid/Base/Neutral Extractables):

Instrument: Agilent 5973N MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.32 um
Column Length: 30 Meters	ID: 0.25 mm

Polynuclear Aromatic Hydrocarbons by 8270 SIM:

Instrument: Agilent 5973 MSD	Injection volume: 1 ul;2 uL LVI
Column Type: Restek RXI-5SILMS	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Pesticides/PCB/Herbicides:

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Petroleum/EPH:

Instrument: Agilent 6890 w/FID / HP 5890 w/ FID	Injection Volume: 1uL
Column: Restek RTX 5	df: 0.25
Column Length: 30 Meters	
ID: 0.32 mm	

Semivolatile Organic Instruments - Mansfield

Semivolatile Organics (ALK-PAH Extractables):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 1 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8270):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 2 ul
Column Type: ZB-Semivolatiles	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (8270 SIM):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: ZB-5	df: 0.25 um
Column Length: 30 Meters	ID: 0.25 mm

Semivolatile Organics (1,4-Dioxane):

Instrument: Agilent 5973N / 5975 / 5977 MSD	Injection volume: 3 ul
Column Type: RTX-5	df: 0.25um, 0.18 um
Column Length: 30 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (209 Congener):

Instrument: Agilent 5973N / 5975 MSD	Injection volume: 3 ul
Column Type: RTX-5, RTX-PCB	df: 0.25um, 0.18 um
Column Length: 60 Meters	ID: 0.25um, 0.18 mm

Semivolatile Organics (8081):

Instrument: Agilent 6890 / 7890	Injection volume: 1 ul
Column Type: RTX-5 / RTX-CLP II	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Semivolatile Organics (8082):

Instrument: Agilent 6890 w/Dual Micro ECDs	Injection Volume: 1uL
Column A: Restek RTX-CL/STX-CL	df: 0.32
Column B: Restek RTX/STX-CLPPesticide II	df: 0.25
Column Length: 30 Meters	ID: 0.32 mm

Semivolatile Organics (SHC Extractables):

Instrument: Agilent 6890	Injection volume: 1 ul
Column Type: RTX-5	df: 0.25 um
Column Length: 60 Meters	ID: 0.25 mm

Sample Delivery Group Summary

Alpha Job Number : L2330491

Account Name : Aqua Pro-Tech Laboratories
Project Number : 23E1291
Project Name : 23E1291

Received : 31-MAY-2023
Reviewer : Craig Sloma-Green

Delivery Information

Samples Delivered By : Alpha Courier

Chain of Custody : Present

Cooler Information

Cooler	Seal/Seal#	Preservation	Temperature(°C)	Additional Information
A	Absent/	Ice	4.1	

Condition Information

1) All samples on COC received?	**YES**
2) Extra samples received?	**NO**
3) Are there any sample container discrepancies?	**NO**
4) Are there any discrepancies between COC & sample labels?	**NO**
5) Are samples in appropriate containers for requested analysis?	**YES**
6) Are samples properly preserved for requested analysis?	**YES**
7) Are samples within holding time for requested analysis?	**YES**
8) All sampling equipment returned?	**NA**

Volatile Organics/VPH

1) Reagent Water Vials Frozen by Client?	**NA**

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2331244 and 23F0039
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: April 10, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MW-06-5.0-6.0-20230601	23F0039-01	6/1/2023	Soil
MW-06-41.0-42.0-20230601	23F0039-02	6/1/2023	Soil
FB-20230601	23F0039-03	6/1/2023	Water
MW-06-66.0-67.0-20230601	23F0039-04	6/1/2023	Soil
TB-20230601	23F0039-05	6/1/2023	Water

Data validation was performed on the analytical data for five (5) samples collected June 1, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. VOCs 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dichlorobenzene and 1,4-Dichlorobenzene associated with sample MW-06-41.0-42.0-20230601 were qualified as rejected due to low internal standard recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibration, laboratory control samples, surrogates, internal standards, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230601 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	MW-06-41.0-42.0-20230601	4-Bromofluorobenzene	10% < %R < CL	J (Detects) UJ (NDs)	3L
	MW-06-41.0-42.0-20230601RE1 MW-06-41.0-42.0-20230601RE2	4-Bromofluorobenzene Dibromofluoromethane Toluene-d8	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	TB-20230601	Bromomethane Dichlorodifluoromethane	10% < %R < CL	J (Detects) UJ (NDs)	6L
	FB-20230601	Bromomethane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Internal Standard	Exceedance	Qualification	Reason Code
8260D	MW-06-41.0-42.0-20230601	1,4-Dichlorobenzene-d4	%R < 20%	J (Detects) R (NDs)	Detects: XH NDs: X
		Chlorobenzene-d5	20% < %R < CL	J (Detects) UJ (NDs)	Detects: XH NDs: X

- Compounds associated with 1,4-Dichlorobenzene-d4 (1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and 1,2-Dibromo-3-chloropropane) are qualified as rejected due to internal standard recovery.
- Compounds associated with Chlorobenzene-d5 (Chlorobenzene, Styrene, Bromoform, 1,1,2,2-Tetrachloroethane and 1,3-Dichlorobenzene) are qualified as estimated (J/UJ) due to internal standard recovery. Certain compounds associated with Chlorobenzene-d5 but not listed here were reported from subsequent dilution analyses which exhibited acceptable internal standard recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB-20230601	4-Methyl-2-pentanone Bromomethane Chloromethane Methyl Acetate	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
		Carbon Tetrachloride	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-06-5.0-6.0-20230601 MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

		Tetrachloroethene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown (5.97). Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries. The original analysis for sample MW-06-41.0-42.0-20230601 exhibited recoveries above control limits for Nitrobenzene-d5 and 2,4,6-Tribromophenol. No qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230601	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Atrazine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MW-06-5.0-6.0-20230601 MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-SIM	MW-06-41.0-42.0-20230601	Naphthalene Phenanthrene Benzo[b]fluoranthene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MW-06-5.0-6.0-20230601 MW-06-66.0-67.0-20230601	DCB	10% < %R < CL	J (Detects) UJ (NDs)	3L
	MW-06-41.0-42.0-20230601	DCB	%R > CL	J (Detects) No action (NDs)	3H
8151A	MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	DCAA	%R > CL	J (Detects) No action (NDs)	3H
8081B	MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	TCMX DCB	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	MW-06-5.0-6.0-20230601 MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	Aroclor 1016	10% < %R < CL	J (Detects) UJ (NDs)	6L
8081B	FB-20230601	Endrin	10% < %R < CL	J (Detects) UJ (NDs)	6L
	MW-06-5.0-6.0-20230601 MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	4,4'-DDE Endosulfan II	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8081B	FB-20230601	Methoxychlor	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230601	Thallium	> CL	J (Detects) No action (NDs)	6H
	MW-06-5.0-6.0-20230601 MW-06-41.0-42.0-20230601 MW-06-66.0-67.0-20230601	Silver	30% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (slightly low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.7:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 245.1 / 7473 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23F0039-01, -02 and -04 have surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PCBs [8082A]
The percent recovery for Aroclor-1016 was outside of the QC limits for the blank spike (low).

Samples 23F0039-01, -02 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23F0039-02 and -04 have surrogates outside of the QC limits (low and high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes, matrix spike and matrix spike duplicate (low and high).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, blank spike duplicates, matrix spike and matrix spike duplicate (low).

Samples 23F0039-02, -02RE1 and -02RE2 have surrogates outside of the QC limits (low), due to matrix interferences.
Sample 23F0039-02 has one internal standard (Chlorobenzene-d5) outside of the QC limits (low) and has no internal standard area response for (1,4-Dichlorobenzene-d4), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

Samples 23F0039-02, -02RE1, -02RE2 and -02RE3 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2331245 and 23F0123
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: May 2, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MW-07-1.0-2.0-20230602	23F0123-01	6/2/2023	Soil
MW-07-6.6-7.6-20230602	23F0123-02	6/2/2023	Soil
FB-20230602	23F0123-03	6/2/2023	Water
MW-07-35.0-36.0-20230602	23F0123-04	6/2/2023	Soil
TB-20230602	23F0123-05	6/2/2023	Water

Data validation was performed on the analytical data for (5) samples collected June 2, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. VOCs 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2-Dichlorobenzene and 1,4-Dichlorobenzene associated with sample MW-07-35.0-36.0-20230602 were qualified as rejected due to low internal standard recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial/continuing calibration, laboratory control samples, surrogates, internal standards, and blanks.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Alkylated PAHs was listed on the COC for FB-20230602 but this analysis was not reported by Alpha laboratories.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	MW-07-35.0-36.0-20230602	4-Bromofluorobenzene Toluene-d8	10% < %R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230602 TB-20230602	Bromomethane	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Internal Standard	Exceedance	Qualification	Reason Code
8260D	MW-07-35.0-36.0-20230602	1,4-Dichlorobenzene-d4	%R < 20%	J (Detects) R (NDs)	Detects: XH NDs: X
		Chlorobenzene-d5	20% < %R < CL	J (Detects) UJ (NDs)	Detects: XH NDs: X

- Compounds associated with 1,4-Dichlorobenzene-d4 (1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene and 1,2-Dibromo-3-chloropropane) are qualified as rejected due to internal standard recovery.
- Compounds associated with Chlorobenzene-d5 (Chlorobenzene, Isopropylbenzene, Bromoform, 1,1,2,2-Tetrachloroethane and 1,3-Dichlorobenzene) are qualified as estimated (J/UJ) due to internal standard recovery. Certain compounds associated with Chlorobenzene-d5 but not listed here were reported from subsequent dilution analyses which exhibited acceptable internal standard recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MW-07-1.0-2.0-20230602 MW-07-6.6-7.6-20230602 MW-07-35.0-36.0-20230602	Tetrachloroethene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	FB-20230602 TB-20230602	Bromomethane Chloroethane Chloromethane Methyl Acetate	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
		Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, and 4-hydroxy-4-methyl-2-Pentanone. Associated sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for PAHs; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries. The original analysis for sample MW-07-35.0-36.0-20230602 exhibited recoveries above control limits for Nitrobenzene-d5 and 2,4,6-Tribromophenol. No qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for benzaldehyde which exhibited a correlation coefficient below the control limit. Associated non-detections were qualified as estimated, UJ, reason code Q.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230602	2,4-Dimethylphenol 4-Nitrophenol Atrazine Benzaldehyde bis(2-chloroisopropyl)ether n-Nitroso-dimethylamine	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Hexachlorobenzene Hexachlorobutadiene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-07-1.0-2.0-20230602 MW-07-6.6-7.6-20230602	2,4-Dinitrophenol 2,4-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MW-07-6.6-7.6-20230602RE2	Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

		Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-SIM	MW-07-6.6-7.6-20230602 MW-07-35.0-36.0-20230602	Naphthalene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	MW-07-6.6-7.6-20230602 MW-07-35.0-36.0-20230602	DCB	%R > CL	J (Detects) No action (NDs)	3H
8081B	MW-07-6.6-7.6-20230602	DCB	%R > CL	J (Detects) No action (NDs)	3H
	MW-07-1.0-2.0-20230602	TCMX and DCB	%R > CL	J (Detects) No action (NDs)	3H
	MW-07-35.0-36.0-20230602	TCMX	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	MW-07-1.0-2.0-20230602 MW-07-6.6-7.6-20230602 MW-07-35.0-36.0-20230602	Aroclor 1016	10% < %R < CL	J (Detects) UJ (NDs)	6L

		Endrin aldehyde Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8151A	MW-07-1.0-2.0-20230602	2,4-D	>CL	J (Detects) No Action (NDs)	4H
8082A	MW-07-1.0-2.0-20230602	Aroclor 1260	>CL	J (Detects) No Action (NDs)	4H

- The MS/MSD analysis performed on a sample MW-07-1.0-2.0-20230602 exhibited recoveries above the control limit for Aroclor 1260. However, since the sample concentration was greater than four times the spike amount, no qualification was required.
- The MS/MSD analysis performed on a sample MW-07-1.0-2.0-20230602 exhibited recoveries above the control limit for all pesticides; RPDs were outside control limits for certain compounds. This may have been the result of a mis-spike. Since all results were non-detect, no qualification was required.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce

quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230602	Thallium	> CL	J (Detects) No action (NDs)	6H
	MW-07-1.0-2.0-20230602 MW-07-6.6-7.6-20230602 MW-07-35.0-36.0-20230602	Silver	30% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- A MS/MSD analysis was not performed on a sample in this SDG.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- A laboratory duplicate analysis was not performed on a sample in this SDG.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits except for SAF0269-CCV1 which was above control limit; associated sample FB-20230602 was non-detect and no qualification was required.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recovery for Silver was outside of the QC limits for the blank spike (slightly low).
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Method 200.7:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 245.1 / 7473 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23F0123-04 has one surrogate (DCAA-2) outside of the QC limits (high), due to matrix interference.

ANALYSIS: PCBs [8082A]
The percent recovery for Aroclor-1016 was outside of the QC limits for the blank spike (low).

Samples 23F0123-02 and -04 have surrogates outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]
Samples 23F0123-01, -02 and -04 have surrogates outside of the QC limits (high), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Samples 23F0123-04, -04RE1 and -04RE2 have surrogates outside of the QC limits (low), due to matrix interferences.
Sample 23F0123-04 has one internal standard (Chlorobenzene-d5) outside of the QC limits (low) and has no internal standard area response for (1,4-Dichlorobenzene-d4), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

Samples 23F0123-04, -04RE1, -04RE2 and -04RE3 have surrogates outside of the QC limits (low and high), due to matrix interferences.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

3-Heptyne	0.0497	10.32	J	mg/kg	1	6/14/23 17:38
Benzene, (1-methylethyl)-	0.0936	16.58	J	mg/kg	1	6/14/23 17:38
Benzene, 1-ethyl-2-methyl-	0.113	16.52	J	mg/kg	1	6/14/23 17:38
Cyclohexane, ethenyl-	0.0398	12.82	J	mg/kg	1	6/14/23 17:38
Cyclohexene, 1,2-dimethyl-	0.0451	12.23	J	mg/kg	1	6/14/23 17:38

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for seven (7) samples collected June 5, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibration, laboratory control samples, matrix spike samples, serial dilutions.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha laboratories.
- Sample FB-20230605 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- All surrogates exhibited acceptable recoveries within QC limits.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230605 TB-20230605	Acetone	%R > CL	J (Detects) No Action (NDs)	6H
	FB-20230605 TB-20230605	Bromomethane	%R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	FB-20230605 TB-20230605	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-1.0-2.0-20230605MS	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-05-1.0-2.0-20230605MSD MW-05-5.0-6.0-20230605	Tetrachloroethene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, 4-hydroxy-4-methyl-2-Pentanone and unknown. Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The 8270E-SIM method blank had low-level detections for C1-Fluoranthenes/Pyrenes; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230605	2,4-Dimethylphenol 2,4-Dinitrophenol 4-Nitrophenol Atrazine bis(2-chloroisopropyl)ether Butylbenzylphthalate Hexachlorocyclopentadiene n-Nitroso-dimethylamine Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (NDs)	SL
	MW-07-66.5-67.5-20230605	2,4-Dimethylphenol 2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MW-05-1.0-2.0-20230605MS MW-05-1.0-2.0-20230605MSD	2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde bis(2-chloroethoxy)methane Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E	MW-05-1.0-2.0-20230605	4-Nitrophenol	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde bis(2-chloroethoxy)methane Hexachlorocyclopentadiene Isophorone Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
	MW-05-5.0-6.0-20230605	2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Benzaldehyde	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Method 8082: Surrogates exhibited acceptable recoveries.
- Method 8081: Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230605	Endrin	10% < %R < CL	J (Detects) UJ (NDs)	6L
	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605	Endosulfan sulfate 4,4'-DDE	10% < %R < CL	J (Detects) UJ (NDs)	6L
	MW-05-1.0-2.0-20230605MS MW-05-1.0-2.0-20230605MSD MW-05-5.0-6.0-20230605	Endrin aldehyde	%R > CL	J (Detects) No action (NDs)	6H
8082A	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-1.0-2.0-20230605MS MW-05-1.0-2.0-20230605MSD MW-05-5.0-6.0-20230605	Aroclor-1016	10% < %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8151A	FB-20230605 MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-1.0-2.0-20230605MS MW-05-1.0-2.0-20230605MSD MW-05-5.0-6.0-20230605	2,4,5-T Silvex (2,4,5-TP)	CCV %D > 20% (decrease in response)	J (detects) UJ (NDs)	SL

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-1.0-2.0-20230605MS MW-05-1.0-2.0-20230605MSD MW-05-5.0-6.0-20230605	Zinc	%R > CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-5.0-6.0-20230605	Copper Calcium	%R > CL	J (Detects) No action (NDs)	4H
		Aluminum Antimony Chromium Cobalt Magnesium Nickel Thallium Vanadium Zinc	10% < %R < CL	J (detects) UJ (non-detects)	4L
		Vanadium	10% > %R < CL	J (detects) UJ (non-detects)	4L
		Antimony Copper Thallium Zinc	RPD > 20%	J (Detects) No action (NDs)	5

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- Laboratory duplicate analysis exhibited acceptable RPDs except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-5.0-6.0-20230605	Barium Beryllium Cadmium Lead Magnesium Nickel Vanadium Zinc	RPD > 20%	J (Detects) No action (NDs)	D

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- Serial dilution exhibited acceptable RPDs except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	MW-07-66.5-67.5-20230605 MW-05-1.0-2.0-20230605 MW-05-5.0-6.0-20230605	Aluminum Barium Beryllium Chromium Cobalt Copper Iron Lead Manganese Nickel Sodium Vanadium Zinc	RPD > 20%	J (Detects) No action (NDs)	AA

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial dilution problem

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).

Method 200.7:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 245.1 / 7473 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23F0169-06 has one surrogate (DCAA) outside of the QC limits (high), due to matrix interference.

ANALYSIS: PCBs [8082A]
The percent recovery for Aroclor-1016 was outside of the QC limits for the blank spike (low).

ANALYSIS: PESTICIDES [8081B]
Samples 23F0169-05 and -06 have one surrogate (Decachlorobiphenyl) outside of the QC limits (low), due to matrix interferences.

The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (lhigh).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).
The blank spikes met all QC criteria.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for four (4) samples collected between June 06, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Endosulfan sulfate associated with sample FB-20230606 was rejected due to major recovery issues associated with laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial calibration, continuing calibration, surrogates, and laboratory control samples.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.
- Sample FB-20230606 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	MW-05-32.5-33.5-20230606 MW-05-66.0-67.0-20230606	4-Bromofluorobenzene	%R < CL	UJ (NDs) J (Detects)	3L
	MW-05-32.5-33.5-20230606RE1 MW-05-32.5-33.5-20230606RE2 MW-05-66.0-67.0-20230606RE1	4-Bromofluorobenzene Toluene-d8 Dibromofluoromethane	%R < CL	UJ (NDs) J (Detects)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	FB-20230606 TB-20230606	Acetone	%R > CL	No action (NDs)	6H
		Bromomethane	%R < CL	UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	MW-05-32.5-33.5-20230606 (RE)	Bromomethane	CCV %D > 20%	UJ (NDs)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	MW-05-32.5-33.5-20230606 (RE) MW-05-66.0-67.0-20230606 (RE)	Chloromethane	(decrease in response)		
	FB-20230606 TB-20230606	Acetone	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-05-32.5-33.5-20230606 MW-05-66.0-67.0-20230606	Tetrachloroethene	CCV %D > 20% (increase in response)	No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- Compounds detections met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples exhibited TIC detections for Hexadecanoic acid, butyl ester, Octadecanoic acid, butyl ester, and unknown compounds; however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.
- The 8270E-SIM method blank had low-level detections for Naphthalene (0.407 ug/kg) and C1-Naphthalenes (0.350 ug/kg); however, all associated sample results exhibited detections greater than five times the blank detection and therefore no qualification was required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for Nitrobenzene-d5 and 2,4,6-Tribromophenol associated with sample MW-05-32.5-33.5-20230606, which exhibited recoveries above control limits. Since only one surrogate per fraction was outside control limits, no qualification was required. Subsequent dilution analyses for sample MW-05-32.5-33.5-20230606 exhibited surrogate recoveries below control limits; however, surrogates were diluted outside the calibration range and therefore no qualification was required for the reanalyses.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	MW-05-32.5-33.5-20230606 MW-05-66.0-67.0-20230606	2,4-Dinitrotoluene 2-Chloronaphthalene Acenaphthene	%R > CL	J (Detects) No Action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230606	Benzaldehyde	%RSD >20%	UJ (NDs)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230606	2,4-Dimethylphenol 4-Nitrophenol Anthracene bis(2-Chloroisopropyl)ether Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
		bis(2-ethylhexyl)phthalate Butylbenzylphthalate	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-05-66.0-67.0-20230606	Atrazine 2,4-Dinitrophenol Benzaldehyde bis(2-chloroethyl)ether Hexachlorocyclopentadiene Pentachlorophenol Phenol	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
		bis(2-ethylhexyl)phthalate Butylbenzylphthalate	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-05-32.5-33.5-20230606 MW-05-66.0-67.0-20230606 (RE1)	Benzaldehyde Hexachlorocyclopentadiene Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-05-32.5-33.5-20230606 (RE1)	Benzaldehyde Benzo(g,h,i)perylene Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		2,3,4,6-Tetrachlorophenol 2,4,6-Trichlorophenol 2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 4,6-Dinitro-2-methylphenol 4-Nitroaniline Caprolactam Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-05-32.5-33.5-20230606 (RE2)	Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20%	J (detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
			(decrease in response)	UJ (non-detects)	
		2,3,4,6-Tetrachlorophenol 2,4-Dinitrophenol 2,4-Dinitrotoluene 2,6-Dinitrotoluene 2-Nitroaniline 2-Nitrophenol 3-Nitroaniline 4,6-Dinitro-2-methylphenol 4-Nitroaniline Benzo(g,h,i)perylene Dibenzo(a,h)anthracene Indeno(1,2,3-cd)pyrene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- Compounds detections met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	FB-20230606	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	J (Detects) UJ (NDs)	3L
	MW-05-66.0-67.0-20230606	Tetrachloro-m-xylene	%R > CL	No action (NDs)	3
		Decachlorobiphenyl	%R < CL	UJ (NDs)	
8081B	FB-20230606	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	UJ (NDs)	3L
	MW-05-32.5-33.5-20230606	Tetrachloro-m-xylene Decachlorobiphenyl [1C,2C]	%R > CL	No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	FB-20230606	Aroclor-1016	%R < CL	J (Detects) UJ (NDs)	6L
8081B	FB-20230606	Endosulfan sulfate	%R < CL (<10%)	R (NDs)	6L
		Methoxychlor	%R > CL	No action (NDs)	6H
	MW-05-32.5-33.5-20230606 MW-05-66.0-67.0-20230606	4,4'-DDE Endosulfan sulfate	%R < CL	J (Detects) UJ (NDs)	6L
		Endrin aldehyde Methoxychlor	%R > CL	No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis percent recoveries were within control limits for project samples.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- Compounds detections met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SM4500-CN	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
Cyanide by SW-846 9014	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The field blank associated soil samples had a detection of Manganese (0.0295 mg/kg). Sample detections are greater than five times the detections in the method blank. No qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230606	Silver	%R < CL	UJ (NDs)	6L
		Aluminum	%R > CL	No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis percent recoveries and RPD on project samples were within control limits.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis RPD on project sample was within control limits.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

COMMENTS/SPECIAL INSTRUCTIONS

Cooler Temp. upon receipt at lab 4.3°C

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]
Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spikes and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 200.7:
The percent recovery for Silver was outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

Methods 245.1 / 7473 / 9014 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]
The percent recovery for Aroclor-1016 was outside of the QC limits for the blank spike (low).

Sample 23F0268-03 has surrogates outside of the QC limits (low and high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]
Sample 23F0268-01 has surrogates outside of the QC limits (high), due to matrix interference.

The percent recoveries for 4,4'-DDE and Endosulfan sulfate were outside of the QC limits for the blank spike (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).
The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Samples 23F0268-01, -01RE1, -01RE2, -03 and -03RE1 have surrogates outside of the QC limits (low), due to matrix interferences.

Sample 23F0268-01 has no internal standard area response for (1,4-Dichlorobenzene-d4), due to matrix interference.
Sample 23F0268-03 has one internal standard (Chlorobenzene-d5) outside of the QC limits (low), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Samples 23F0268-01, -01RE1 and -01RE2 have surrogates outside of the QC limits (low and high), due to matrix interferences.

Cyclobutane, ethenyl-	0.0441	8.06	J	mg/kg	1	6/14/23 18:08
Cyclohexene, 1-methyl- (01)	0.0502	11.14	J	mg/kg	1	6/14/23 18:08
Cyclohexene, 1-methyl- (02)	0.0429	12.21	J	mg/kg	1	6/14/23 18:08

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for eight (8) samples collected on June 07, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

Overall, the data is acceptable for the intended purposes. Certain poor responding soil SVOC results were rejected due to major recovery issues associated with the laboratory control samples; additionally, endosulfan sulfate associated with the FB-20230607 was rejected due to laboratory control samples. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial calibration, continuing calibration, surrogates, matrix spike/matrix spike duplicates, laboratory control samples and field duplicates.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.
- The matrix spike and matrix spike duplicate collected associated with sample MW-04-1.5-2.5-20230607 was logged in by the laboratory as individual samples (23F0430-02/L2332837-02) and (23F0430-03/L2332837-03). No comparability evaluation for these samples was conducted during validation. Samples were evaluated as normal field samples.
- Sample FB-20230607 was listed for Alkylated PAH analysis; these samples were not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated soil samples had detections of methylene chloride (0.0383 mg/kg). Associated sample are non-detect. No qualification is required.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- All surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS MW-04-1.5-2.5-20230607MSD MW-04-41.5-42.5-2023060 DUP-20230607	Acetone Chloromethane Methylene chloride	%R > CL	No action (NDs)	6H
	FB-20230607 TB-20230607	Bromomethane	%R < CL	UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS and/or MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	DUP-20230607	1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2-Dichlorobenzene 1,3-Dichlorobenzene 1,4-Dichlorobenzene 2-Hexanone Chlorobenzene Chlorodibromomethane cis-1,3-Dichloropropene EthylBenzene Isopropylbenzene m+p-Xylenes Methyl Acetate o-Xylene Styrene trans-1,3-Dichloropropene	%R < CL	J (Detects) UJ (NDs)	4L

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230607 is the sample duplicate for MW-04-1.5-2.5-20230607. All RPDs were within control limits.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a

correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS MW-04-1.5-2.5-20230607MSD MW-04-41.5-42.5-20230607 DUP-20230607	2-Butanone 2-Hexanone Acetone Methylene Chloride	CCV %D > 20% (increase in response)	No action (NDs)	SH
	FB-20230607 TB-20230607	Bromomethane Chloroethane Chloromethane Methyl Acetate	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
		Carbon Tetrachloride Trichlorofluoromethane	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-04-5.5-6.5-20230607	Tetrachloroethene	CCV %D > 20% (increase in response)	No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with soil samples had TIC detections of "lab contamination." Sample detections less than five times the method blank detection are qualified as rejected, reason code 2.
- The method blank associated soil samples had detections of Naphthalene and C1-Naphthalenes (8270E-SIM). Sample detections are greater than five times the detections in the method blank.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS	Benzaldehyde Hexachlorocyclopentadiene	10% > %R < CL	J (Detects) UJ (NDs)	6L

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230607 is the sample duplicate for MW-04-1.5-2.5-20230607. All RPDs were within control limits except C3-Phenanthrenes/Anthracenes, C4-Phenanthrenes/Anthracenes and Naphthalene. Details are at the end of the report. Parent and duplicate concentrations for associated analyte are qualified as estimated, J, reason code 8.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230607 MW-04-41.5-42.5-20230607	Benzaldehyde	%RSD >20%	UJ (NDs)	Q
	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS	2-Nitrophenol	%RSD >20%	UJ (NDs)	Q
8270E	MW-04-67.0-68.0-20230609	Benzo(b)fluorene	%RSD >20%	UJ (NDs)	Q
		Perylene			

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230607	2,4-Dimethylphenol 2,4-Dinitrophenol 4-Nitrophenol Benzaldehyde bis(2-Chloroisopropyl)ether Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
	MW-04-41.5-42.5-20230607	2,4-Dinitrophenol 4-Nitrophenol Benzaldehyde bis(2-Chloroisopropyl)ether Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
	MW-04-1.5-2.5-20230607MSD MW-04-5.5-6.5-20230607 DUP-20230607	Benzaldehyde Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (NDs)	SL
		2,4-Dinitrotoluene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS	Benzaldehyde bis(2-chloroethoxy)methane Hexachlorocyclopentadiene Isophorone Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		4-Nitrophenol	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	FB-20230607 MW-04-1.5-2.5-20230607MSD	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	J (Detects) UJ (NDs)	3L
8151A	MW-04-41.5-42.5-20230607 DUP-20230607	2,4-DCAA 2,4-DCAA-2	%R <CL	UJ (NDs)	3L
8081B	FB-20230607	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	UJ (NDs)	3L
	MW-04-1.5-2.5-20230607MSD	Tetrachloro-m-xylene Decachlorobiphenyl	%R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230607	Endosulfan sulfate	%R < CL (<10%)	J (Detects) R (NDs)	6L
		Methoxychlor	%R > CL	No action (NDs)	6H
	MW-04-1.5-2.5-20230607 MW-04-1.5-2.5-20230607MS	Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L
		4,4'-DDT Endosulfan sulfate Methoxychlor	%R > CL	No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis percent recoveries were within control limits for project samples.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230607 is the sample duplicate for MW-04-1.5-2.5-20230607. All RPDs were within control limits.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230607	Cadmium Silver Zinc	%R > CL	No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was not performed on samples evaluated in this report.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230607 is the sample duplicate for MW-04-1.5-2.5-20230607. All RPDs were within control limits except Mercury and Magnesium. Details are at the end of the report. Parent and duplicate concentrations for associated analyte are qualified as estimated, J, reason code 8.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

[a]Results in red text and italics were below reporting limits. Values are reporting limits for comparison purposes only.

[b]**Relative Percent Difference (RPD)** is a quantitative indicator of quality assurance and quality control (QA/QC) for repeated measurements (i.e. duplicates) where the outcome is expected to be the same. It is calculated using the following equation:

$$RPD = \left| \frac{x_1 - x_2}{(x_1 + x_2)/2} \right| \times 100$$

[c]When both results are greater than 5X the Reporting Limit (RL) the RPD is calculated. If either result is below 5X the RL, the absolute difference between the two results is compared to 4X the RL.

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 9014:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 200.7 / 7473 / 245.1 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23F0430-06 and -07 have surrogates outside of the QC limits (low), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Sample 23F0430-03 has one surrogate (Decachlorobiphenyl) outside of the QC limits (low), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]
Sample 23F0430-03 has surrogates outside of the QC limits (low), due to matrix interference.

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Bromomethane was outside of the QC limits for the blank spike duplicate (low).

The percent recoveries for some compounds were outside of the QC limits for the matrix spikes and matrix spike duplicates (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, matrix spike and matrix spike duplicates (low).

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Positive Results Only Summary

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Positive Results Only Summary

1,2,3-Trichlorobenzene	ND	U	0.488	1.00	ug/L	1	6/13/23 17:29
1,2,4-Trichlorobenzene	ND	U	0.437	1.00	ug/L	1	6/13/23 17:29

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT
GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: L2333076 and 23F0501
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: March 25, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
MW-04-67.0-68.0-20230609	23F0501-01 L2333076-01	06/09/2023	Soil
FB-20230609	23F0618-02	06/09/2023	Water
TB-20230609	23F0618-03	06/09/2023	Water

Data validation was performed on the analytical data for three (3) samples collected on June 9, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial and continuing calibration, surrogates and laboratory control samples.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.
- Samples FB-20230609 was listed for Alkylated PAH analysis; these samples were not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- All surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When

parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB-20230609 FB-20230609	Bromomethane	CCV %D > 20% (decrease in response)	UJ (non-detects)	SL
		Acetone	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-04-67.0-68.0-20230609	1,2-Dibromo-3-chloropropane Bromomethane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	MW-04-67.0-68.0-20230609	Hexachlorocyclopentadiene	%R < CL	J (Detects) UJ (NDs)	6L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	MW-04-67.0-68.0-20230609	Benzaldehyde	%RSD >20%	UJ (NDs)	Q
8270E-SIM	MW-04-67.0-68.0-20230609	Benzo[a]pyrene	%RSD >20%	UJ (NDs)	Q
		Perylene			

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230609	2,4-Dimethylphenol 2,4-Dinitrophenol 4-Nitrophenol Benzaldehyde bis(2-Chloroisopropyl)ether	CCV %D > 20% (decrease in response)	UJ (NDs)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
		Hexachlorocyclopentadiene			
	MW-04-67.0-68.0-20230609	4-Nitrophenol	CCV %D > 20% (increase in response)	No action (NDs)	SH
	MW-04-67.0-68.0-20230609	Benzaldehyde bis(2-chloroethoxy)methane Hexachlorocyclopentadiene Isophorone Pentachlorophenol	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
8270E-SIM	MW-04-67.0-68.0-20230609	Acenaphthene Phenanthrene Anthracene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	FB-20230609	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	J (Detects) UJ (NDs)	3L
8151A	FB-20230609	2,4-DCAA 2,4-DCAA-2	%R > CL	No action (NDs)	3H
	MW-04-67.0-68.0-20230609	2,4-DCAA 2,4-DCAA-2	%R <CL	J (Detects) UJ (NDs)	3L
8081B	FB-20230609	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R < CL	J (Detects) UJ (NDs)	3L

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	FB-20230609	Endosulfan sulfate	%R < CL (<10%)	J (Detects) R (NDs)	6L
		Methoxychlor	%R > CL	No action (NDs)	6H
	MW-04-67.0-68.0-20230609	Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis percent recoveries were within control limits for project samples.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230609	Cadmium	%R < CL	No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was not performed on samples evaluated in this report.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 9014:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 200.7 / 7473 / 245.1 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Sample 23F0501-01 has surrogates outside of the QC limits (low), due to matrix interference.

ANALYSIS: PCBs [8082A]
All samples met the QC criteria.

ANALYSIS: PESTICIDES [8081B]
The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).
The percent recovery for Endosulfan II was outside of the QC limits for the blank spike (low).

The percent recovery for 4,4'-DDT was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spike, matrix spike and matrix spike duplicate (low).

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for six (6) samples collected between June 12 and June 13, 2023, by Yu and associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Semivolatiles - Alkylated PAHs	USEPA SW-846 8270D-SIM
Pesticides	USEPA SW-846 8081B
Herbicides	USEPA SW-846 8151A
PCBs	USEPA SW-846 8082A
Metals	USEPA SW846 6010D
Mercury	USEPA 7473/245.1
Cyanide	USEPA SW846 9014
Free Cyanide	SM 4500NC-E(M)

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Herbicide results associated FB-20230612 were rejected due to major surrogate recovery issues. Minor analytical issues were found with the following data quality indicators resulting in qualified results: initial calibration, continuing calibration, surrogates, matrix spike/matrix spike duplicates, and laboratory control samples.

Chain of Custody:

- Aqua Protech Labs (APL) subcontracted alkylated PAHs and Free Cyanide analyses to Alpha labs and transferred samples to Alpha using the APL lab IDs.
- Sample FB-20230612 was listed for Alkylated PAH analysis; this sample was not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for Dibromofluoromethane in sample OH-SB-62-1.0-2.0-20230612, which recovered below control limits. Associated sample results were qualified as estimated J/UJ, reason code 3L.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When

both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB-20230613 FB-20230612	Bromomethane	CCV %D > 20% (decrease in response)	UJ (non-detects)	SL
	OH-SB-62-1.0-2.0-20230612 OH-SB-62-9.0-10.0-20230612 OH-SB-61-1.0-2.0-20230613 OH-SB-61-9.0-10.0-20230613	1,2-Dibromo-3-chloropropane Bromomethane Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (non-detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries for all samples.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample

results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met except for analytes presented in the following table.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230612	Benzaldehyde	%RSD >20%	UJ (NDs)	Q

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	FB-20230612	2,4-Dimethylphenol 2,4-Dinitrophenol 2-Nitroaniline 4-Nitrophenol Benzaldehyde bis(2-Chloroisopropyl)ether bis(2-Ethylhexyl)phthalate Benzyl butyl phthalate Hexachlorocyclopentadiene N-Nitrosodiphenylamine	CCV %D > 20% (decrease in response)	UJ (NDs)	SL
	OH-SB-62-1.0-2.0-20230612 OH-SB-62-9.0-10.0-20230612 OH-SB-61-1.0-2.0-20230613	2,4-Dinitrotoluene 2-Nitroaniline 4-Nitrophenol	CCV %D > 20% (decrease in	J (detects) UJ (non-detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	OH-SB-61-9.0-10.0-20230613	Benzaldehyde	response)		

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-SB-61-9.0-10.0-20230613	Decachlorobiphenyl Decachlorobiphenyl [2C]	%R > CL	No action (NDs)	3H
8151A	FB-20230612	2,4-DCAA 2,4-DCAA [2C]	%R <CL<10%	J (Detects) R (NDs)	3L
	OH-SB-62-1.0-2.0-20230612 OH-SB-62-9.0-10.0-20230612 OH-SB-61-1.0-2.0-20230613	2,4-DCAA 2,4-DCAA [2C]	%R <CL	J (Detects) UJ (NDs)	3L
8081B	OH-SB-61-9.0-10.0-20230613	Tetrachloro-m-xylene Decachlorobiphenyl	%R > CL	No action (NDs)	3H
		Tetrachloro-m-xylene [2C]	%R > CL		

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8082A	OH-SB-61-1.0-2.0-20230613	Aroclor-1016	%R < CL	J (Detects) UJ (NDs)	6L
8081B	OH-SB-62-1.0-2.0-20230612 OH-SB-62-9.0-10.0-20230612 OH-SB-61-1.0-2.0-20230613 OH-SB-61-9.0-10.0-20230613	Endosulfan II	%R < CL	J (Detects) UJ (NDs)	6L
	FB-20230612	Endosulfan sulfate Endrin	%R < CL	J (Detects) UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- CCVs exhibited compounds above control limits; however, associated samples results were non-detect, and qualification was not warranted.
- The original lab report had issues affecting how pesticide and PCB calibration factors were reported in the CCV summaries. That information was later corrected and provided as an addendum to the data package.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 601D	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by SW-846 7473	Soil	28 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SW-846 9014	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	FB-20230612	Antimony	%R < CL	UJ (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibit6ed acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
6010D	OH-SB-62-1.0-2.0-20230612	Cyanide	%R > CL	J (detects) No action (NDs)	4H

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The lab duplicate analysis was not performed on samples evaluated in this report.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- The serial dilution analysis was not performed on samples evaluated in this report.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for the SDGs evaluated in this report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
AA	Serial dilution problem
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015B or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1, Method 8260C.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8260C.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1, Method 8270D.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8270D.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537.

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8081B.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3, Method 8082A.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 19th Edition".

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of APL's certified Methods are accessible on the Standards And Docs page of the Results Retrieval System

MDL:

Method Detection Limit. The minimum reportable concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero. The value is calculated from the analysis of seven replicates of a spike sample. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

RL:

Reporting Limit. The Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc) / Result:

If the compound is detected, the measured concentration is reported. If this column is left blank, or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search.

Qualifiers:

- **U:** Indicates the compound was analyzed for but was not detected.
- **J:** Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
- **B:** Indicates the analyte was found in the method blank as well as the sample.
- **N:** Used when reporting a specific tentatively identified compound.
- **E:** Indicates that the concentration of the compound exceeds the calibration range of the instrument. The results of a diluted analysis will also be reported. The results of the dilution should be used for those compounds exceeding the calibration range in the undiluted analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [6010D / 200.7 / 7473 / 245.1 / 9014 / SM 4500-CN C-16 plus E-16]

Method 6010D:
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 9014:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (high). The blank spike met all QC criteria.

Method 200.7:
The percent recovery for Antimony was outside of the QC limits for the blank spike (low).
The percent recoveries for some metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low).

Methods 7473 / 245.1 / SM 4500-CN C-16 plus E-16:
All samples met the QC criteria.

ANALYSIS: Herbicides [8151A]
Samples 23F0618-01, -02 and -05 have surrogates outside of the QC limits (low), due to matrix interferences.

ANALYSIS: PCBs [8082A]
Sample 23F0618-06 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]
The percent recoveries for some compounds were outside of the QC limits for the blank spikes (low).

The percent recovery for 4,4'-DDT was outside of the QC limits for the matrix spike and matrix spike duplicate (low).
The blank spike met all QC criteria.

Sample 23F0618-06 has surrogates outside of the QC limits (high), due to matrix interference.

ANALYSIS: VOLATILES BY GC/MS [8260D]
The continuing calibrations were outside of the QC limits for some compounds (low).

Sample 23F0618-01 has one surrogate (Dibromofluoromethane) outside of the QC limits (low), due to matrix interference.
Sample 23F0618-02 has one internal standard (1,4-Dichlorobenzene-d4) outside of the QC limits (low), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]
The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for Benzaldehyde was outside of the QC limits for the blank spike (low).
The percent recoveries for 2,4-Dinitrophenol and 4,6-Dinitro-2-methylphenol were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

ND - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard

D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

DATA USABILITY SUMMARY REPORT

GOWANUS FORMER SITE

Client: Brown and Caldwell, Albany, New York
SDGs: 23H0547
Laboratory: Aqua Pro-tech Laboratories, Fairfield, New Jersey
Site: Gowanus, NY
Date: May 3, 2024

Client Sample ID	Laboratory Sample ID	Date Collected	Matrix
0H-MW-04S-20230808	23H0547-01	8/8/2023	Water
0H-MW-04I-20230808	23H0547-02	8/8/2023	Water
0H-MW-04D-20230808	23H0547-03	8/8/2023	Water
FB-20230808	23H0547-04	8/8/2023	Water
0H-MW-05S-20230808	23H0547-05	8/8/2023	Water
0H-MW-05D-20230808	23H0547-06	8/8/2023	Water
TB-20230808	23H0547-07	8/8/2023	Water

Data validation was performed on the analytical data for seven (7) samples collected August 8, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Pesticides	USEPA SW-846 8081B
PCBs	USEPA SW-846 8082A
Metals	USEPA 200.7/200.8
Mercury	USEPA 245.1
Cyanide	SM 4500-CN

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. SVOCs associated with sample 0H-MW-05S-20230808 were qualified as rejected due to holding time exceedance. Additionally, non-detect results for aluminum, thallium and cyanide were qualified as rejected due to low matrix spike recoveries. Minor analytical issues were found with the following data quality indicators resulting in qualified results: holding times, continuing calibration, laboratory control samples, surrogates, matrix spike samples, and serial dilution.

Chain of Custody:

- No issues were noted with the chain of custody.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	0H-MW-04S-20230808 0H-MW-04I-20230808 0H-MW-04D-20230808 FB-20230808 0H-MW-05S-20230808 0H-MW-05D-20230808	Acetone	> CL	J (Detects) No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included for this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	TB-20230808	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Chloromethane Vinyl chloride	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	0H-MW-04S-20230808 0H-MW-04I-20230808 0H-MW-04D-20230808	Bromomethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
	FB-20230808 0H-MW-05S-20230808 0H-MW-05D-20230808	2-Butanone Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and method holding times were achieved except for the samples listed in the following table. Samples analyzed within 1.5X the holding time are qualified as estimated (J/UJ). For analyses that occurred beyond 1.5 times the method holding time, associated sample detections are qualified as estimated, J, and non-detections are qualified as rejected, R, reason code 1.

Method	Sample	Holding Time (HT)	Exceedance	Qualification	Reason Code
8270E	0H-MW-05S-20230808	24 Hours	HT > 1.5X HT Criteria	J (Detects) R (NDs)	1

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All samples were received properly preserved and holding times were achieved for all analyses.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for sample 0H-MW-05D-20230808 which exhibited recoveries above control limits for multiple surrogates. Detected results were qualified as estimated, J, reason code 3H.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and or LCSD analysis exhibited acceptable recoveries.

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD

percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	0H-MW-05S-20230808	3,3'-Dichlorobenzidine	10% > %R < CL	J (Detects) R (NDs)	4L
		Naphthalene	%R > CL	J (Detects) No action (NDs)	4H

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	0H-MW-04S-20230808 0H-MW-04I-20230808 0H-MW-04D-20230808 FB-20230808 0H-MW-05D-20230808	Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Benzaldehyde	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	0H-MW-05S-20230808	2,4-Dinitrophenol Hexachlorocyclopentadiene	CCV %D > 20% (decrease in response)	J (detects) UJ (non-detects)	SL
		Benzaldehyde	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	0H-MW-05D-20230808	TCMX	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	0H-MW-04S-20230808 0H-MW-04I-20230808 0H-MW-04D-20230808 0H-MW-05S-20230808 0H-MW-05D-20230808 FB-20230808	Endosulfan sulfate	10% < %R < CL	J (Detects) UJ (NDs)	6L
		beta-BHC Endrin Ketone Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- The MS/MSD analysis performed on sample 0H-MW-05S-20230808 exhibited recoveries above the control limits for most pesticides; however, all results were non-detect and therefore no qualification was required.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D EPA 200.7&200.8	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.
Cyanide by SM 4500CN-E(M)	Water	14 days from collection to analysis	Cool to <6 °C; preserved to a pH of greater than 12.
	Soil	14 days from collection to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination with the following exception: The method blank associated with all samples exhibited detections for barium. Associated sample detections were all greater than five times the method blank detection and therefore no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- The MS/MSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
200.7/200.8/ SM 4500-CN	0H-MW-05S-20230808	Manganese	30% < %R < CL	J (Detects) No Action (NDs)	4L
		Thallium Aluminum Potassium Cyanide	30% > %R < CL	J (Detects) R (NDs)	4L

- The MS/MSD analysis performed on a sample 0H-MW-05S-20230808 exhibited recoveries outside control limit for Barium, Calcium, Magnesium and Sodium. However, since the sample concentration was greater than four times the spike amount, no qualification was required.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis performed on sample 0H-MW-05S-20230808 exhibited acceptable RPDs.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis performed on sample 0H-MW-05S-20230808 exhibited acceptable %Ds except for Barium and Sodium. Results are qualified as estimated, J, reason code AA. Qualifications are applied to all samples in the same preparation batch.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- Field duplicates were not included in this SDG.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial dilution percent difference outside limits

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [200.8 / 200.7 / 245.1 / SM 4500-CN C-16 plus E-16]

Method 200.8:
The percent recoveries for Barium and Thallium were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Method 200.7:
The percent recoveries for several metals were outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Methods 245.1:
All samples met the QC criteria.

Method SM 4500-CN C-16 plus E-16:
The percent recovery for Cyanide was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

ANALYSIS: PCBs [8082A]

Sample 23H0547-06 has one surrogate (Tetrachloro-m-xylene) outside of the QC limits (high), due to matrix interference.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).

Sample 23H0547-06 has one surrogate (Tetrachloro-m-xylene [2C]) outside of the QC limits (slightly high), due to matrix interference.

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recovery for 3,3'-Dichlorobenzidine was outside of the QC limits for the matrix spike and matrix spike duplicate (low). The blank spike met all QC criteria.

Sample 23H0547-06 has surrogates outside of the QC limits (high), due to matrix interference.

* Note: Sample 23H0547-05 was extracted beyond the holding time of 7 days.

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Data validation was performed on the analytical data for eight (8) samples collected August 9, 2023, by Yu and Associates at the Gowanus Site in New York. The samples were analyzed under the Environmental Protection Agency (USEPA) "Test Methods for Evaluating Solid Waste Physical/Chemical SW-846 Method" described below.

Specific method references are as follows:

Analysis	Method References
Semivolatile Organic Compounds (SVOCs)	USEPA SW-846 8270E
Volatile Organic Compounds (VOCs)	USEPA SW-846 8260D
Pesticides	USEPA SW-846 8081B
PCBs	USEPA SW-846 8082A
Metals	USEPA 200.7/200.8
Mercury	USEPA 245.1

Data were reviewed in accordance with the USEPA National Functional Guidelines (NFGs) listed below and appropriate method specific USEPA Region II Data Validation Standard Operating Procedures (SOPs). The USEPA NFGs were developed for the Contract Laboratory Program (CLP) methods and may not be applicable to the analytical methods and procedures utilized by the laboratory for this data set. Results were also qualified using analytical method criteria and the reviewer's professional judgement where specific guidance was not applicable.

- USEPA. National Functional Guidelines for Superfund Organics Methods Data Review. OLEM 9240.0-51, EPA 540-R-20-005, November 2020
- USEPA. National Functional Guidelines for Superfund Inorganics Methods Data Review. OLEM 9240.0-51, EPA 542-R-20-006, November 2020
- USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review. OSWER 9240.1-05A-A-P EPA540/R-99/008. October 1999

- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review. OSWER 9240.1-45 EPA540/R-04/004. October 2004
- USEPA Contract Laboratory Program Region II Data Validation SOPs (HW-2, HW-22, HW-24, HW-44, HW-45)

The following items/criteria were reviewed for this report:

- Data Completeness
- Chain of Custody
- Holding times and sample preservation
- Field Duplicate Accuracy
- Internal Standard Area and RT
- Surrogates
- Laboratory Control Sample (LCS) recoveries
- Matric Spike and Matrix Spike Duplicate Samples
- Method and field blank contamination
- Laboratory Duplicate Samples
- Serial Dilution
- Initial and continuing calibration summaries
- Compound Quantitation
- Reporting Limits
- Sample comments and Quality Control Summaries

Overall Usability Issues:

- Overall, the data is acceptable for the intended purposes. Minor analytical issues were found with the following data quality indicators resulting in qualified results: continuing calibration, laboratory control samples, field duplicate and surrogates.

Chain of Custody:

- Cyanide was listed on the chain of custody but samples were not analyzed for this parameter.

Volatile Organic Compounds (VOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260D	Water	14 days from collection to analysis (preserved) 7 days from collection to analysis (non-preserved)	Cool to <6 °C; preserved to a pH of less than 2
	Soil	48 hours from collection to extraction and 14 days from extraction to analysis	Cool to <6 °C.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established control limits (CL).

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8260D	OH-MW-05I-20230809 OH-MW-06D-20230809	4-Bromofluorobenzene	%R > CL	J (Detects) No action (NDs)	3H
	OH-MW-07D-20230809	Toluene-d8			

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established control limits (CL).

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8260D	OH-MW-06D-20230809 OH-MW-06S-20230809 OH-MW-07D-20230809 DUP-20230809	1,1,2-Trichloroethane 1,1-Dichloroethane 1,1-Dichloroethene Acetone Bromomethane Chloroethane Chloromethane	> CL	J (Detects) No action (NDs)	6H

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
		Vinyl chloride 1,2-Dichloropropane Chloroform cis-1,2-Dichloroethene Methylene Chloride trans-1,2-Dichloroethene			
		1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene	10% > %R < CL	J (Detects) R (NDs)	6L
	FB-20230809 0H-MW-07S-20230809 TB-20230809	2-Butanone Acetone 1,2,4-Trimethylbenzene 2-Hexanone	> CL	J (Detects) No action (NDs)	6H
		1,2,4-Trichlorobenzene 1,2-Dichlorobenzene Bromomethane	10% > %R < CL	J (Detects) R (NDs)	6L

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230809 is the sample duplicate for 0H-MW-07D-20230809. All RPDs were within control limits. Details are at the end of the report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- Internal standards exhibited acceptable recoveries.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8260D	OH-MW-05I-20230809	Acetone	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Chloromethane Vinyl chloride	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	FB-20230809 OH-MW-07S-20230809 TB-20230809	2-Butanone 2-Hexanone 4-Methyl-2-pentanone Acetone tert-Butyl alcohol	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
		Dichlorodifluoromethane	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL
	OH-MW-06D-20230809 OH-MW-06S-20230809 OH-MW-07D-20230809 DUP-20230809	1,1-Dichloroethene Acetone Chloroethane Chloromethane	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH
	OH-MW-06D-20230809 OH-MW-06S-20230809 OH-MW-07D-20230809 DUP-20230809	1,2,3-Trichlorobenzene 1,2,4-Trichlorobenzene 1,2-Dibromo-3-chloropropane Bromoform	CCV %D > 20% (decrease in response)	UJ (NDs) J (Detects)	SL

Compound Quantitation and Identification

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated VOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

Semivolatile Organic Compounds (SVOCs)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SVOCs by SW-846 8270E and 8270D-SIM	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and method holding times were achieved.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All samples were received properly preserved and holding times were achieved for all analyses.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. SVOC analysis requires that two of the three SVOC surrogate compounds within each fraction exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for sample OH-MW-06D-20230809 which exhibited recoveries above control limits for Nitrobenzene-d5. Since only one out of three base neutral surrogates were outside control limits, no qualification was required.
- Several samples required dilution due to high concentrations of target compounds. Surrogates were outside control limits for dilution analyses; however, the original analyses exhibited acceptable recoveries in all cases. Therefore, no qualification was required.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8270E	OH-MW-07D-20230809 OH-MW-07S-20230809 DUP-20230809	4-Bromophenyl-phenyl ether	10% < %R < CL	J (Detects) UJ (NDs)	6L
		bis(2-ethylhexyl)phthalate Butylbenzylphthalate Di-n-octylphthalate Pyrene	> CL	J (Detects) No action (NDs)	6H

Matrix Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% RPD is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230809 is the sample duplicate for 0H-MW-07D-20230809. All RPDs were within control limits. Details are at the end of the report.

Internal Standard Areas

Internal standards are used to monitor instrument performance and ensure instrument sensitivity and response are stable during sample analysis. The internal standard area count must within a (50-200%) range of the associated standard. The retention time of the internal standard must not vary by more than ±10 seconds from the associated continuing calibration standard.

- All samples exhibited acceptable internal standard values.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) and relative response factor (RRF) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- All recoveries and/or correlation coefficient criteria were met.
- for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed. The RRF control limit is (0.05) or (0.01) for poor responding compounds.

- ICVs and CCVs were within the specified control limits except for analytes presented in the following table.

Method	Sample	Analyte(s)	Exceedance	Qualification	Reason Code
8270E	0H-MW-05I-20230809 0H-MW-06D-20230809 0H-MW-06S-20230809	2,4-Dinitrophenol 4,6-Dinitro-2-methylphenol 4-Chloro-3-methylphenol 4-Nitrophenol Acetophenone bis(2-chloroethoxy)methane bis(2-chloroethyl)ether Caprolactam Isophorone Nitrobenzene	CCV %D > 20% (increase in response)	J (detects) No action (NDs)	SH

Reporting Limits and Compound Quantitation

GC/MS analysis utilizes retention time and mass spectra criteria to identify detected results.

- All identified compounds met the specified criteria.
- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T. Some samples were diluted due to elevated SVOC concentrations and elevated reporting limits are provided.
- Tentatively Identified Compounds (TICs) are qualified as estimated, reason code A.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Mass Spectrometer tuning criteria was within control limits.
- Overall system performance was acceptable.

GC Methods (PCBs, Pesticides, Herbicides)

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
SW-846 8081B (Pesticides), 8082A (PCBs) and 8151A (Herbicides)	Water	7 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C
	Soil	14 days from collection to extraction and 40 days from extraction to analysis	Cool to <6 °C

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Surrogates

Surrogate compounds are spiked prior to sample preparation and are used to monitor the overall performance of the analytical method. GC analyses requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

- Surrogates exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Surrogate	Exceedance	Qualification	Reason Code
8082A	OH-MW-05I-20230809 OH-MW-06D-20230809 OH-MW-06S-20230809 OH-MW-07D-20230809 DUP-20230809	TCMX	%R > CL	J (Detects) No action (NDs)	3H

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS and/or LCSD analysis exhibited acceptable recoveries except for analytes presented in the following table.

Method	Sample	Analyte	Exceedance	Qualification	Reason Code
8081B	0H-MW-05I-20230809 0H-MW-06D-20230809 FB-20230809 0H-MW-06S-20230809 0H-MW-07D-20230809 0H-MW-07S-20230809 DUP-20230809	Endosulfan sulfate	10% < %R < CL	J (Detects) UJ (NDs)	6L
		beta-BHC Endrin Ketone Methoxychlor	%R > CL	J (Detects) No action (NDs)	6H

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- A MS/MSD analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230809 is the sample duplicate for 0H-MW-07D-20230809. All RPDs were within control limits. Details are at the end of the report.

Initial Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. The method specifies percent relative standard deviation (%RSD) limits for select compounds. A maximum RSD of 20% is allowed or a correlation coefficient greater than 0.99.

- All recoveries and/or correlation coefficient criteria were met.
- The original lab report was missing correlation coefficients for analytes that were evaluated with a different curve fit. That information was later provided as an addendum to the data package.

Continuing Calibration

The continuing calibration is used to assess calibration drift. A maximum percent difference (%D) of 20% is allowed.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Compound Quantitation

GC methods utilizes retention time and dual column analysis to identify detected results. When dual column analysis is performed the percent difference (%D) of detected sample results must be less than 25%.

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.
- Dual column comparison was not provided as part of the data package.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Metals and General Chemistry

Holding Times and Preservation

Samples must be extracted and/or analyzed within method-specific holding times and meet the preservation requirements listed in the following table.

Method	Matrix	Holding Time	Preservation
Metals by SW-846 6010D EPA 200.7&200.8	Water	180 days from collection to analysis	Preserved to a pH of less than 2.
	Soil	180 days from collection to analysis	Cool to <6 °C.
Mercury by EPA 245.1	Water	28 days from collection to analysis	Cool to <6 °C; preserved to a pH of less than 2.

- All samples were received properly preserved and holding times were achieved for all analyses.

Blanks - Method, Trip, Field, ICBs and CCBs

Quality assurance (QA) blanks (i.e., method, trip, field, or rinse blanks) are prepared to identify and measure contamination which may have been introduced into samples during sample preparation or field sampling procedures.

- All QA/QC blanks were free of contamination.

Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Samples

The LCS (and LCSD) and is used to assess the accuracy and precision of the analytical method independent of sample matrix. Percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits.

- LCS/LCSD analysis exhibited acceptable recoveries.

Matric Spike and Matrix Spike Duplicate (MS/MSD) Samples

Matrix spike/matrix spike duplicate analysis is utilized to assess the accuracy and precision of the method by measuring the effects of interferences caused by the sample matrix. The MS/MSD percent recoveries and relative percent differences (RPDs) must be within laboratory-established acceptance limits. Qualifications are applied to all samples in the same preparation batch.

- The MS/MSD analysis performed on a sample OH-MW-07S-20230809 for mercury exhibited acceptable recoveries and RPDs.

Laboratory Duplicate

Laboratory duplicate analysis measures precision of the analytical method. The relative percent difference (RPD) is measured between parent and duplicate sample results. The Laboratory duplicate RPDs must be within laboratory-established acceptance limits.

- The laboratory duplicate analysis performed on sample OH-MW-07S-20230809 for mercury exhibited acceptable RPDs.

Serial Dilution

The serial dilution analysis indicates the presence matrix interferences. Sample results greater than 50 times the MDL are evaluated, and percent difference (%D) is measured between undiluted and diluted sample results. A control limit of 20% is applied.

- A serial dilution analysis was not performed on a sample in this SDG.

Field Duplicate Accuracy

The field duplicate analysis is employed to measure precision in both the field and laboratory. The relative percent difference (RPD) is measured between parent and duplicate sample results. When both results are greater than or equal to five time the reporting limit (RL), a control limit of 30% relative percent difference (RPD) is applied for water samples and 50% RPD for soil samples. When parent and/or duplicate sample results are less than five times the RL, the absolute difference between the two results is compared to two times the RL for water samples and four times the RL for soil samples.

- DUP-20230809 is the sample duplicate for OH-MW-07D-20230809. All RPDs were within control limits except for aluminum and iron. Parent and duplicate concentrations for associated analytes are qualified as estimated, J/UJ, reason code 8. Details are at the end of the report.

Initial Calibration and Continuing Calibration

The initial calibration curve is developed by plotting instrument response of analytes versus the known concentrations of analyte standards, and linearity ensures the instrument can produce quantitative data. Continuing calibration standards are used to assess calibration drift.

- ICVs and CCVs were within the specified control limits.

Reporting Limits and Analyte Quantitation

- All sample detections detected above the MDL and below the RL are appropriately qualified as estimated, J, by the laboratory, reason code T.

System Performance and Overall Assessment

Instrument performance indicators were evaluated, and overall analytical integrity was assessed.

- Overall system performance was acceptable.

Please contact the undersigned if you have any questions or need further information.

Data Qualifiers

J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was not detected above the sample reporting limit; and the reporting limit is approximate.

U = The analyte was analyzed for but was not detected above the method detection limit.

R = The sample results is rejected due to serious deficiencies. The presence or absence of the analyte cannot be verified.

Reason Codes

1	Holding time violation
2	Method blank contamination
3	Surrogate recovery
4	MS/MSD recovery
5	MS/MSD precision outside limits
6	LCS recovery
7	Field blank contamination
8	Field duplicate precision outside limits
9	Other deficiencies (including cooler temperature)
A	Absence of supporting QC
S	ICV, CCV or column performance check problem
Y	Initial and continuing calibration blank problem
M	Interference check samples problem
O	Post digestion spike outside of 85-115%
F	MSA correlation coefficient <0.995, or MSA not done
G	Radiochem Minimum Detectable Concentration (MDC)
K	DFTPP or BFB tuning problem
Q	Initial calibration problem
X	Internal standard recovery problem
V	Second source standard calibration verification problem
L	Low bias
Z	Retention time problem
N	Counting time error (radionuclide chemistry)
W	Detector instability (radionuclide chemistry)
C	Co-elution of compounds
E	Value exceeds linear calibration range
I	Interferences present during analysis
T	Trace level compound, poor quantitation
P	1C/2C precision outside limits
B	LCS/LCSD precision outside limits
D	Lab Dup/Rep precision outside limits
H	High bias
AA	Serial dilution percent difference outside limits

[a]Results in red text and italics were below reporting limits. Values are reporting limits for comparison purposes only.

[b]**Relative Percent Difference (RPD)** is a quantitative indicator of quality assurance and quality control (QA/QC) for repeated measurements (i.e. duplicates) where the outcome is expected to be the same. It is calculated using the following equation:

$$RPD = \left| \frac{x_1 - x_2}{(x_1 + x_2)/2} \right| \times 100$$

[c]When both results are greater than 5X the Reporting Limit (RL) the RPD is calculated. If either result is below 5X the RL, the absolute difference between the two results is compared to 2X the RL.

COMMENTS/SPECIAL INSTRUCTIONS

Cooler Temp. upon receipt at lab 4.0

CERTIFICATIONS: NELAP (National Environmental Laboratory Accredation Program) NJDEP #07010 PADEP #68-02903 NYDOH #11634 CTPH #0233 US ARMY

By signing this Chain of Custody Agreement, customer expressly agrees to pay APL for all charges, reasonably incurred in connection with analysis and reporting for these samples

Extractable Petroleum Hydrocarbons:

Gas Chromatography/Flame Ionization Detector

New Jersey Department of Environmental Protection Site Remediation Program Extractable Petroleum Hydrocarbons Methodology (Version 3.0).
USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8015D or NJDEP Office of Quality Assurance Quantitation of Semi-Volatile Petroleum Products in Water, Soil and Sediment OQA-QAM-025, Revision 6.

Metals:

Inductively-Coupled Plasma Atomic Emission Spectrometry or Inductively-Coupled Plasma Mass Spectroscopy

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 200.7, Method 200.8.
Soil Samples: USEPA Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 6010D.

Mercury:

Cold Vapor Atomic Absorption Spectrometry

Wastewater and Groundwater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 245.1.
Soil Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 7471B.

Volatile Organic Compounds:

Purge and Trap Gas Chromatography/Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Organic Compounds in Drinking Water, Method 524.2.
Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 624.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8260D.

Semi-Volatile Organic Compounds:

Gas Chromatography/Mass Spectroscopy

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 625.1.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update VI, Method 8270E.

PFAS Compounds:

Liquid Chromatography/Tandem Mass Spectroscopy

Drinking Water Samples: USEPA Methods for the Determination of Selected Perfluorinated Alkyl Acids in Drinking Water by Solid Phase Extraction and Liquid Chromatography/Tandem Mass Spectrometry (LC/MS/MS), Method 537 (v1.1).

Pesticides:

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8081B.

Polychlorinated Biphenyls (PCBs):

Gas Chromatography/Electron Capture Detector

Wastewater Samples: USEPA Methods for the Analysis of Water and Wastes, Method 608.3.
Soil and Groundwater Samples: USEPA SW-846 Test Methods for Evaluating Solid Waste Physical/Chemical Methods Update III, Method 8082A.

General Chemistry Methods:

Various general chemistry methods are taken from "Standard Methods for the Examination of Water and Wastewater, 22nd Edition", .

Specific method citations can be found on the Analytical Results Summary page of this report listed under 'Method'.

** A complete list of Pace Fairfield's certified Methods are on the Standards And Docs page of the Results Retrieval System

Method Detection Limit (MDL):

The MDL is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results. The value is calculated following the guidelines defined in:
"**Definition and Procedure for the Determination of the Method Detection Limit, Revision 2**"
EPA 821-R-16-006, published December 2016.

Reporting Limit (RL):

The RL is the Concentration of the lowest calibration standard that was included in the initial calibration of the instrument. On analytical reports this value is corrected for percent moisture and any concentration or dilution factors.

Concentration (Conc.) / Result:

If the compound is detected, the measured concentration is reported. If this column is "ND", or contains a 'less than' (<) symbol, the compound was not detected.

Tentatively Identified Compound (TIC):

A TIC is a non-targeted compound, not included in the calibration, identified by a mass spectral library search OR requested to be identified and reported by the client.

Abbreviations:

ND	Non-Detect
TNTC	Too Numerous To Count

Qualifiers:

U	Indicates the compound was analyzed for but was not detected.
J	Indicates an estimated value. All tentatively identified compounds (TICs) and results below the RL receive this qualifier.
E	Indicates that the concentration of the compound exceeds the calibration range of the instrument. In most cases the results of a diluted analysis will be reported instead and contain a "**D"** qualifier.
D	Indicates result is based on a dilution. This can occur when an initial analysis was **E** flagged, if historical data indicates a dilution may be appropriate on an initial run, OR if the consistency of the sample is such that the instrument may not perform properly if left undiluted.
H	Indicates a Hold Time violation.
B	Indicates the Analyte was found in the method blank as well as the sample.
N	Used when reporting a specific tentatively identified compound.
P	Greater than 25% diff. between 2 GC columns for a Dual Column Analysis.

QUALITY CONTROL
Conformance/Non-Conformance Summary

ANALYSIS: INORGANICS [200.8 / 200.7 / 245.1]

Methods 200.7 / 200.8:
All samples met the QC criteria.

Method 245.1:
All samples met the QC criteria.

ANALYSIS: PCBs [8082A]

Samples 23H0666-01, -02, -04, -05 and -07 have one surrogate (Tetrachloro-m-xylene) outside of the QC limits (high), due to matrix interferences.

ANALYSIS: PESTICIDES [8081B]

The percent recovery for Endosulfan sulfate was outside of the QC limits for the blank spike (low).

ANALYSIS: SEMI-VOLATILES BY GC/MS [8270E]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for 4-Bromophenyl-phenyl-ether and Hexachlorobenzene were outside of the QC limits for the blank spike (low).

Samples 23H0666-01RE2, -02RE1, -02RE2, -05RE2 and -07RE2 have surrogates diluted outside of the QC limits.

ANALYSIS: VOLATILES BY GC/MS [8260D]

The continuing calibrations were outside of the QC limits for some compounds (low and high).

The percent recoveries for some compounds were outside of the QC limits for the blank spikes and blank spike duplicates (low).

Samples 23H0666-01, -02 and -05 have surrogates outside of the QC limits (high), due to matrix interferences.

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

Selenium	ND	U	0.00300	0.0300	mg/L	5	8/23/23 15:21

ND, U - Indicates compound analyzed for but not detected
J - Indicates estimated value
B - Indicates compound found in associated blank
E - Concentration exceeds highest calibration standard
D - Indicates result is based on a dilution
H - Indicates a Hold Time violation
P - Greater than 25% diff. between 2 GC columns.
MDL - Minimum detection limit, **RL** - Reporting limit
D1 - Sample was Decanted (Dissolved)

EXECUTIVE SUMMARY

Environmental Planning & Management, Inc. (EPM), as a sub-consultant to HSBC, performed an investigation for the presence of asbestos containing materials (ACM) in Soil for the project at **NYC DEP Owl's Head Gowanus Canal**. The buildings and areas on site investigated to date are located at the following addresses:

- **134 A 5th Street, Brooklyn – IC Industrial**
- **142 5th Street, Brooklyn – Plumbing Works**
- **32 2nd Avenue, Brooklyn – First Response Restoration Services**
- **110 5th Street, Brooklyn – Workspace 11**
- **134 B 5th Street, Brooklyn – Ferro Fabricators**
- **2 Second Avenue, Brooklyn - Bus Parking Lot**

The scope of work for this project is the demolition of the buildings and grading of the soil to prepare the property for construction of new buildings. Field inspections were conducted on May 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13, 15, 16, 17, 18, 19, 22, 23, 24, 25, 26, 30, 31, and June 1, 2, 5, 6, and 7, 2023 by Joseph P. Cascio a New York City Department of Environmental Protection (NYC DEP) Certified Asbestos Investigator of Environmental Planning & Management Inc.

Asbestos Survey

EPM conducted an asbestos soil survey of the buildings and the bus parking lot. Bulk samples were collected from soil during soil boring operations. For the indoor locations a 6-inch diameter hole was cut in the concrete floor slab. Hand removal of the soil beneath the slab to a depth between one and two feet, an asbestos soil sample was collected. The soil bore would continue to a depth of four to six feet, where a second asbestos soil sample was collected. The second sample was only to be analyzed if the first sample was found to contain asbestos. In some instances, a second sample could not be collected because of an impenetrable barrier existing below the first layer of soil or the boring location was moved to a new location.

There were seventy-eight (78) soil samples collected at forty soil boring locations. **Laboratory analytical results indicate that thirteen (13) of the soil boring locations have asbestos materials and/or asbestos fibers in the soil.** These materials will be impacted by the demolition of the buildings and grading of the soil for construction. The areas which have asbestos contaminated soil are the First Response Restoration Services, Plumbing Works tenant space and the Bus Parking Lot. Two tenant's areas, TL State Distributers and Shred Up, the survey team were not permitted access for soil sampling due to the buildings being occupied at the time of the survey and the drilling work interfering with tenant operations. In these two areas the soil has been presumed asbestos contaminated until the areas can be sampled.

It is possible that additional suspect asbestos contaminated soil/ debris may be present below the floor slabs in other buildings at the Owl's Head Gowanus Canal site where no asbestos was found during the survey. It is impossible to identify all the materials below the floor in a building when only sampling from only a few locations within each tenant space. All suspect materials encountered during the course of demolition work and site preparation must be assumed to contain asbestos until proven otherwise via laboratory analytical testing.

All asbestos containing materials which will be disturbed by the demolition and construction activities must be removed in accordance with all applicable Federal, State and City asbestos regulations**.**

A summary of all asbestos containing materials anticipated to be impacted by this project, including their description, location, and quantity, are summarized in the following Table 1. A soil depth of 4.5 feet has been used to calculate quantities of asbestos contaminated soil in cubic yards. Schematics showing ACM sample locations are included in Appendix C. Asbestos bulk sample laboratory analytical data is included as Appendix E. Impacted asbestos material location schematics are included as Appendix F.

Table 1
Summary of Asbestos in Soil
NYC DEP Owl's Head Gowanus Canal, Brooklyn, New York

Sample I.D.	Sampling Location	Sample Description	Asbestos Content		Asbestos Contaminated Soil
			Polarized Light Microscopy	Transmission Electron Microscopy	
First Response Restoration Services					
FR-01A	OH-SB-50 at 1 Foot Depth	Soil Fractions (>19mm, Coarse, Medium, Fine)	0.23% Chrysotile Asbestos		The estimated quantity of soil to be disposed of should be based on the depth of the planned excavation of the property
FR-01B-FF-BM2 23-05-007-08	OH-SB-50 at 3.5 Foot Depth	Coarse Fraction - Building Material 2-Tar Like	2.1 Chrysotile Asbestos		
FR-01B-FF-BM3 23-05-007-09	OH-SB-50 at 3.5 Foot Depth	Coarse Fraction - Building Material 3-Linoleum Like	No Asbestos Detected, Inconclusive	16% Chrysotile Asbestos	

Sample I.D.	Sampling Location	Sample Description	Asbestos Content		Asbestos Contaminated Soil
			Polarized Light Microscopy	Transmission Electron Microscopy	
Plumbing Works					
PW-01A	OH-SB-45 at 1 Foot Depth	Soil Fractions (>19mm, Coarse, Medium, Fine)	0.21% Chrysotile Asbestos		The estimated quantity of soil to be disposed of should be based on the depth of the planned excavation of the property

1.0 INTRODUCTION

Environmental Planning & Management, Inc. (EPM), as a sub-consultant to HSBC, performed an investigation for the presence of asbestos containing materials (ACM) within the buildings at **NYC DEP Owl's Head Gowanus Canal.** The buildings are located at the following addresses:

- **134A 5th Street, Brooklyn – IC Industrial**
- **142 5th Street, Brooklyn – Plumbing Works**
- **32 2nd Avenue, Brooklyn – First Response Restoration Services**
- **110 5th Street, Brooklyn – Workspace 11**
- **134B 5th Street, Brooklyn – Ferro Fabricators**
- **2 2nd Avenue, Brooklyn – Bus Parking Lot**

The purpose of this hazardous materials investigation was to survey the soil underneath the buildings and bus parking lot that will be impacted by the demolition scope of work to identify asbestos containing materials (materials with an asbestos content of greater than 1%).

The scope of work for the investigation consisted of the following tasks:

1. Collect soil samples during the soil boring within the spaces identified above.

2. Submit the suspect ACM samples to a certified laboratory for asbestos analysis of soil aggregate samples by ASTM D7521.

3. Prepare a report summarizing the location of asbestos containing materials within the soil which will be impacted as part of the demolition scope of work.

2.0 HAZARDOUS MATERIALS SURVEY

This section describes data collection activities including the site inspection and sample collection. Field inspections were conducted on May 1, 2, 3, 4, 5, 8, 9, 10, 11, 12, 13, 15, 16, 17, 18, 19, 22, 23, 24, 25, 26, 30, 31, June 1, 2, 5, 6, and 7, 2023 by Joseph P Cascio a New York City Department of Environmental Protection Certified Asbestos Investigator (117607) of Environmental Planning & Management Inc.

2.1 Scope of Work

The scope of work for this project is the demolition of these buildings to prepare the property for construction of a new NYC DEP facility.

2.2 Sample Collection Methods

2.2.1 Asbestos Survey

A strategy for soil boring at the proposed location was based upon previous site reconnaissance during the site visit. The exact soil boring location was adjusted to accommodate tenant requirements, as long as the drilling operation could be conducted safely. A coring device was utilized to cut a six-inch hole through the concrete floor slab. Once through the slab to the soil, the drilling contractor will utilize various hand tools to remove soil and debris from the location down to six feet. Soil sampling was conducted at a depth between one to two feet is reached. A second sample was collected at a depth of between four to six feet. The second sample was only analyzed if the first sample is asbestos or has asbestos fibers in the soil. The asbestos soil boring locations bulk sample location schematics are presented in Appendix C.

2.3 Field Observations

2.3.1 General Description

All the buildings are constructed of cement block walls, red brick, white brick, steel or wood beams, with either a wood ceiling deck or metal ceiling deck. The floors of the buildings are bare concrete slabs. The asbestos soil sampling required the coring of the floor slabs to sample the soil beneath. The floor slabs were usually greater than 12 inches of concrete. The soil beneath contained debris such as: bricks, small rocks and pieces of building material.

The Bus Parking Lot has an asphalt top layer with a several inches of soil and a second layer of asphalt beneath. There are layers of brick and more debris such as; wood, metal, glass, brick, rocks and other small pieces of building materials. At the five-to-six-foot depth is the water table. All soil samples were dried before laboratory analysis. Saturated soil below the water table line was not sampled for asbestos.

2.3.2 Asbestos Survey Observations

During the asbestos soil survey, the accessible areas potentially impacted by the proposed work were investigated. The soil underneath the floor slabs in two of the buildings, TL State Distributors and Shred Up, were not accessible. These areas were not accessible due to **tenant occupancy. These areas must be inspected once the buildings have been vacated or the soil presumed asbestos containing**.

The soil within the First Response Restoration Services, Plumbing Works Spaces property and Bus Parking Lot contain asbestos materials and detectable asbestos mineral structures (fibers).

All asbestos materials removed as part of this demolition project must be removed in compliance with New York City Title 15 Chapter 1, New York State Industrial Code Rule 56, and US Environmental Protection Agency asbestos regulations prior to demolition of the buildings or other construction trades impacting these materials.

2.4 Analytical Procedures

2.4.1 Asbestos Bulk Sample Analysis

The bulk samples of suspect ACM were delivered to Alpha Laboratories located at 14-26 28th Avenue, Long Island City, New York. Alpha Labs is accredited by the New York State Department of Health (NYS DOH) Environmental Laboratory Accreditation Program (Alpha Labs ELAP # 11833), and the National Voluntary Laboratory Accreditation Program (Alpha Labs NVLAP# 200691-0). Laboratory accreditation documentation is included as Appendix D.

The asbestos in soil analysis was conducted by ASTM Method D7521. During the soil sample preparations pieces of soil which appeared to be remnants of building materials were removed and analyzed using Polarized Light Microscopy (PLM) with dispersion staining, as described in 40 CFR Part 763 and National Emissions Standards for Hazardous Air Pollutants (NESHAPS) regulations.

Friable samples were analyzed by Polarized Light Microscopy (PLM) via ELAP Method 198.1. Non-friable organically bound materials (NOBs) were analyzed by PLM NOB via ELAP Method 198.6. NOBs with an asbestos concentration less than or equal to one percent were reanalyzed by Transmission Electron Microscopy (TEM) with gravimetric preparation via ELAP Method 198.4. TEM analysis is the only method that can be used to determine if inconclusive non-friable organically bound materials (NOBs) can be considered non-asbestos containing.

3.0 SURVEY RESULTS

3.1 Asbestos Analytical Results

Laboratory analytical results indicate that **asbestos containing materials** and **asbestos structures (fibers)** exist in the soil underneath the floor slab of the **First Response Restoration Services and Plumbing Works property,** and in the **Bus Parking Lot underneath the asphalt**. The following areas have asbestos in the soil:

First Response Restoration Services – 32 2nd Avenue, Brooklyn

- Asbestos containing building materials were found within the soil underneath the slab at Soil Boring Hole 50 at the 3.5-foot level.

Plumbing Works – 142 5th Street, Brooklyn

- Asbestos containing building materials were found within the soil underneath the slab at Soil Boring Holes 45 and 46 at the one-foot level.

Bus Parking Lot – 2 Second Avenue, Brooklyn

- Asbestos containing building materials were found within the soil underneath the parking lot and at Soil Boring Holes 13, 14, 18, 23, 27, 28, 22, 16A, 12A and the hole for Monitoring Well 07. The soil depth varied from 1 to 4.5 feet.

A summary of all asbestos containing soils anticipated to be impacted by this project, including their description, location and quantity, are summarized in Table 1. A list of the soils sampled along with the associated laboratory analyses can be found in Tables 2. Schematics showing locations of boring holes where the soil was collected are included in Appendix C. The Lab Report for the Asbestos in Soil - Analysis by Method ASTM D7521 with bulk sample laboratory analytical data is included as Appendix E. Impacted asbestos material location schematics are included as Appendix F.

4.0 CONCLUSIONS AND RECOMMENDATIONS

4.1 Asbestos Containing Materials

Asbestos containing soil has been identified at NYC DEP Owl's Head Gowanus Canal. The following addresses contain asbestos materials or presumed asbestos containing materials:

- **32 2nd Avenue, Brooklyn – First Response Restoration Services**
- **142 5th Street, Brooklyn – Plumbing Works**
- **2 2nd Avenue, Brooklyn – Bus Parking Lot**
- **22 2nd Avenue – TL State Distributers**
- **110 5th Street – Shred-Up**

First Response Restoration Services - 32 2nd Avenue, Brooklyn
Asbestos building materials were found within the soil underneath the slab at Soil Boring Hole 50. The soil within the limits of the 32 2nd Avenue property should be considered asbestos containing.

Plumbing Works - 142 5th Street, Brooklyn
Asbestos building materials were found within the soil underneath the slab at Soil Boring Hole 45 and 46. The soil within the limits of the 142 5th Street property should be considered asbestos containing.

Bus Parking Lot - 2 Second Avenue, Brooklyn
Asbestos building materials were found within the soil underneath the parking lot and at Soil Boring Holes 13, 14, 18, 23, 27, 28, 22, 16A, 12A and the hole for Well 07. The soil within the limits of the 2 Second Avenue property should be considered asbestos containing.

TL State Distributers - 22 2nd Avenue, Brooklyn
The soil below the floor slab is **presumed** to be asbestos contaminated until it can be sampled and analyzed. The soil within the limits of the 22 2nd Avenue property should be considered asbestos containing.

Shred Up - 110 5th Street, Brooklyn
The soil below the floor slab is **presumed** to be asbestos contaminated until it can be sampled and analyzed. The soil within the limits of the 110 5th Street property should be considered asbestos containing.

A site-specific asbestos abatement variance for excavation and disposal of this soil must be obtained from the New York City Department of Environmental Protection. Site specific variance procedures should include the following work procedures.

- The asbestos soil abatement work must be performed by a licensed asbestos abatement contractor.
- All abatement workers including the heavy equipment operators must have asbestos certification.

- Designation of a restricted work area where asbestos soil is being excavated.
- Use of wet methods to prevent asbestos fiber generation or migration.
- Air monitoring should be conducted around the perimeter of the abatement work area.
- Designation of an equipment decontamination area for heavy equipment.
- Capture of the wastewater from decontamination procedures to be filtered and disposed.

This soil may contain additional contaminants based on other environmental analysis performed. This soil may require special handling procedures and disposal requirements if it contains additional contaminants. The estimated quantity of soil to be disposed of should be based on the depth of the planned excavation of the property.

It is possible that additional suspect ACM may be present within concealed hidden spaces which were not identified on the drawing. All suspect asbestos containing materials encountered during the demolition activities must be assumed to contain asbestos until proven otherwise via laboratory analytical testing. All asbestos containing materials must be removed and properly disposed of in accordance with all City, State, and Federal regulations prior to impact by the demolition project.

APPENDIX B
Company and Personnel Licenses

WE ARE YOUR DOL

NEW YORK STATE | Department of Labor

DIVISION OF SAFETY & HEALTH LICENSE AND CERTIFICATE UNIT, STATE OFFICE CAMPUS, BLDG. 12, ALBANY, NY 12226

ASBESTOS HANDLING LICENSE

Environmental Planning & Management, Inc.
1983 Marcus Avenue, Suite 109, Lake Success, NY, 11042

License Number: 28623
License Class: RESTRICTED
Date of Issue: 11/02/2022
Expiration Date: 11/30/2023
Duly Authorized Representative: Aphrodite Socrates

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

APPENDIX C
Asbestos Soil Analysis Lab Report

14-26 28th Avenue Long Island City, NY 11102
Tel.: (718) 482-7525 Fax: (718) 482-7524 www.alphalabsllc.com

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
First Response – 32 2nd Ave., Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: FR-01A – Location: OH SB-50; 1 feet depth

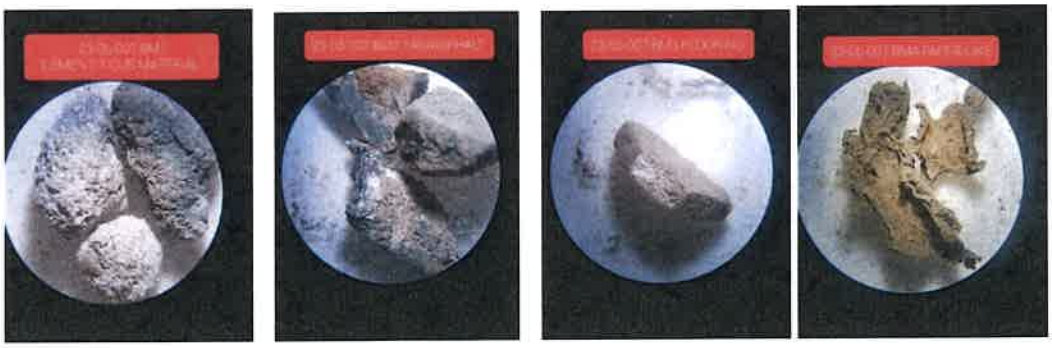
Sample Collected: 5/1/23
Sample received by the lab: 5/3/23 in wet condition – 455.66 gr
Sample dried on 5/3-4/23 in an oven at 110^{0}C until the weight is stable – 432.91 gr
Moisture content determined at 4.99%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation.

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
>19mm	29.33	NAD (No Asbestos Detected)
C (Coarse Fraction) < 19 to > 2mm	W_C =185.11	0.50% CH
M (Medium Fraction) < 2mm to > 106 µm	W_M =207.86	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F =10.61	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{W_F + W_M + W_C}$ **= 0.23% CH**

Analyzing the coarse fraction using stereomicroscopy four building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. All four building materials were determined as Non-ACM.



14-26 28th Avenue Long Island City, NY 11102
Tel.: (718) 482-7525 Fax: (718) 482-7524 www.alphalabsllc.com

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/5/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.217
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3017
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/10/23)

Soil Sample: FR-02A – Location: OH SB-52; 1 feet depth

Sample Collected: 5/2/23
Sample received by the lab: 5/3/23 in wet condition – 398.32 gr
Sample dried on 5/3-4/23 in an oven at 110^{0}C until the weight is stable – 383.60 gr
Moisture content determined at 3.70%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation.

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
First Response – 32 2nd Ave., Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: FR-03A – Location: OH SB-51; 1 foot depth

Sample Collected: 5/3/23
Sample received by the lab: 5/4/23 in wet condition – 400.82 gr
Sample dried on 5/4-5/23 in an oven at 110°C until the weight is stable – 374.82 gr
Moisture content determined at 6.49%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/8/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =158.84	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =198.99	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F =16.99	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC} * W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{W_F + W_M + W_C}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy three building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. All three building materials were determined as Non-ACM.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/10/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.218
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3003
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/12/23)

Soil Sample: FR-04A – Location: OH SB-60; 1-2 foot depth

Sample Collected: 5/3/23
Sample received by the lab: 5/4/23 in wet condition – 336.84 gr
Sample dried on 5/4-5/23 in an oven at 110^{0}C until the weight is stable – 283.74 gr
Moisture content determined at 15.76%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/8/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =114.86	NAD (No Asbestos Detected)

QC Review: D. Molohides, Lab Director

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 0.25%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
IC Industrial – 134A 5th Street, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: IC-01A – Location: OH SB-40; 1 foot depth

Sample Collected: 5/9/23
Sample received by the lab: 5/10/23 in wet condition – 485.02 gr
Sample dried on 5/10-11/23 in an oven at 110^{0}C until the weight is stable – 419.31 gr
Moisture content determined at 13.55%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/15/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =23.59	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =308.05	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F =87.67	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy one building material found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. The building material was determined as Non-ACM.

14-26 28th Avenue Long Island City, NY 11102

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/16/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.204
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3210
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/17/23)

Soil Sample: IC-02A – Location: OH SB-41; 1 foot depth

Sample Collected: 5/9/23
Sample received by the lab: 5/10/23 in wet condition – 488.22 gr
Sample dried on 5/10-11/23 in an oven at 110^{0}C until the weight is stable – 447.23 gr
Moisture content determined at 8.40%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/15/23**

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy four building material found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. Two building materials were determined as - ACM, this will trigger the analysis of sample PW-2B which is collected from the same location OH-SB-46 but at 4-foot depth.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/17/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.198
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3307
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/18/23)

Soil Sample: PW-02B – Location: OH SB-46; 4 foot depth

Sample Collected: 5/12/23
Sample received by the lab: 5/15/23 in wet condition – 328.93 gr
Sample dried on 5/16/23 in an oven at 110^{0}C until the weight is stable – 248.00 gr
Moisture content determined at 24.60%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/22/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =78.58	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =147.76	NAD (No Asbestos Detected)

Analyzing the coarse fraction using stereomicroscopy no building materials found in soil.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/19/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.186
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3520
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/19/23)

Date of Report: 5/22/23

No asbestos structures were found (Date of Analysis: 5/23/23)

Soil Sample: BPL-05A – Location: OH SB-13; 1.5 foot depth

Sample Collected: 5/16/23
Sample received by the lab: 5/18/23 in wet condition – 574.05 gr
Sample dried on 5/19/23 in an oven at 110^{0}C until the weight is stable – 539.17 gr
Moisture content determined at 6.08%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/22/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =295.66	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =212.26	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F = 31.25	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy two building material found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. One building material was determined as - ACM, this will trigger the analysis of sample BPL-5B which is collected from the same location OH-SB-13 but at 4-foot depth.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/22/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.209
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 0.25%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
Bus Parking Lot, 2 2nd Avenue, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: BPL-6B – Location: OH SB-14; 6 foot depth

Sample Collected: 5/17/23
Sample received by the lab: 5/18/23 in wet condition – 384.11 gr
Sample dried on 5/19/23 in an oven at 110^{0}C until the weight is stable – 337.07 gr
Moisture content determined at 12.25%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 7/11/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =161.49	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =165.28	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F = 10.30	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy two building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. Both building materials were determined as Non-ACM.

14-26 28th Avenue Long Island City, NY 11102

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 7/12/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.205
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3194
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 7/13/23)

Date of Report: 7/14/23

We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)
Starting weight (gr): 0.216
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3031
Total Asbestos Structures= 12 chrysotile structures
Asbestos concentration = 3.6372 structures / µg
(Date of Analysis: 5/31/23)

Soil Sample: BPL-11A – Location: OH SB-29; 2 foot depth

Sample Collected: 5/18/23
Sample received by the lab: 5/19/23 in wet condition – 587.05 gr
Sample dried on 5/20/23 in an oven at 110^{0}C until the weight is stable – 560.89 gr
Moisture content determined at 4.46%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/24/23**

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = NAD

Analyzing the coarse fraction using stereomicroscopy two building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. The building materials were determined as Non-ACM.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/24/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

NYS-DOH ELAP # 11833 **NVLAP Lab Code: 200691-0**

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
Bus Parking Lot, 2 2nd Avenue, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: BPL-14A – Location: OH SB-25; 1-2 foot depth

Sample Collected: 5/22/23
Sample received by the lab: 5/23/23 in wet condition – 545.90 gr
Sample dried on 5/24/23 in an oven at 110^{0}C until the weight is stable – 497.22 gr
Moisture content determined at 8.92%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/25/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C =226.34	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =252.77	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F =18.11	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy one building material found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. This building material was tested as Non-ACM.

TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/25/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.207

Effective filter area of 47-mm filter = 1320 mm^2

Grid Openings analyzed: 24

Average grid opening area (mm^2): 0.0084

Area Analyzed (mm^2): 0.2016

Analytical Sensitivity (structures / µg) =0.3163

Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/26/23)

Soil Sample: BPL-15A – Location: OH SB-31; 1-2 foot depth

Sample Collected: 5/22/23

Sample received by the lab: 5/23/23 in wet condition – 540.47 gr

Sample dried on 5/24/23 in an oven at 110^{0}C until the weight is stable – 499.84 gr

Moisture content determined at 7.52%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/25/23**

QC Review: D. Molohides, Lab Director

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 0.25%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

LAB REPORT
ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
Bus Parking Lot, 2 2nd Avenue, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: BPL-18A – Location: OH SB-16; 1-2 foot depth

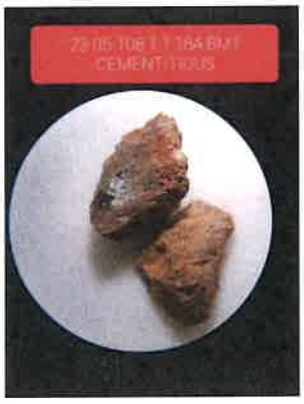
Sample Collected: 5/24/23
Sample received by the lab: 5/25/23 in wet condition – 584.47 gr
Sample dried on 5/26/23 in an oven at 110^{0}C until the weight is stable – 558.42 gr
Moisture content determined at 4.46%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/30/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C = 348.91	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M = 202.93	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F = 6.58	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy two building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. Both building materials were tested as Non-ACM.



TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 5/30/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.196

Effective filter area of 47-mm filter = 1320 mm^2

Grid Openings analyzed: 24

Average grid opening area (mm^2): 0.0084

Area Analyzed (mm^2): 0.2016

Analytical Sensitivity (structures / µg) =0.3341

Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 5/31/23)

Soil Sample: BPL-19A – Location: OH SB-16A; 1-2 foot depth

Sample Collected: 5/25/23

Sample received by the lab: 5/25/23 in wet condition – 554.69 gr

Sample dried on 5/26/23 in an oven at 110^{0}C until the weight is stable – 524.61 gr

Moisture content determined at 5.42%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 5/30/23**

FRACTIONS	**WEIGHTS AFTER SIEVING (gr)**	**PLM Analysis**

Date of Report: 6/6/23

PLM Analyst: K. Diomis

QC Review: D. Molphides, Lab Director

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 0.25%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

NYS-DOH ELAP # 11833 **NVLAP Lab Code: 200691-0**

LAB REPORT

ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
Bus Parking Lot, 2 2nd Avenue, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: BPL-21A – Location: OH SB-12; 1-2 foot depth

Sample Collected: 5/31/23
Sample received by the lab: 6/1/23 in wet condition – 553.57 gr
Sample dried on 6/2/23 in an oven at 110^{0}C until the weight is stable – 532.38 gr
Moisture content determined at 3.83%

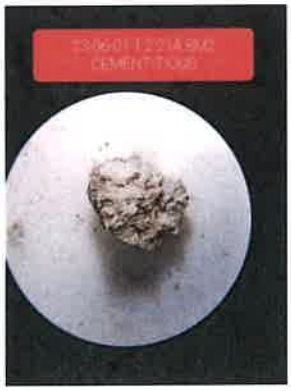
PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 6/6/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
C (Coarse Fraction) < 19 to > 2mm	W_C = 328.07	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =192.69	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F = 11.62	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

Analyzing the coarse fraction using stereomicroscopy two building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. Both building materials were tested as Non-ACM.



TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

No Asbestos structures were found. (Date of analysis 6/7/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.210
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3118
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 6/8/23)

Soil Sample: BPL-22A – Location: OH SB-12A; 2 foot depth

Sample Collected: 5/31/23
Sample received by the lab: 6/1/23 in wet condition – 611.56 gr
Sample dried on 6/2/23 in an oven at 110^{0}C until the weight is stable – 589.22 gr
Moisture content determined at 3.65%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 6/6/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
>19mm	25.63	NAD (No Asbestos Detected)
C (Coarse Fraction) < 19 to > 2mm	W_C = 310.92	NAD (No Asbestos Detected)
M (Medium Fraction) < 2mm to > 106 µm	W_M =236.66	NAD (No Asbestos Detected)
F (Fine Fraction) < 106 µm	W_F = 16.01	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **NAD**

ASBESTOS IN SOIL – ANALYSIS BY METHOD ASTM D7521

CLIENT: **Environmental Planning & Management Inc.**
1983 Marcus Ave., Suite 109, Lake Success NY 11042

BUILDING ADDRESS: **NYC DEP Gowanus Owl's Head**
Bus Parking Lot, 2 2nd Avenue, Brooklyn, NY 11215

PROJECT: **202145**

Soil Sample: MW-07A – Location: Monitoring Well 07; 1 foot depth

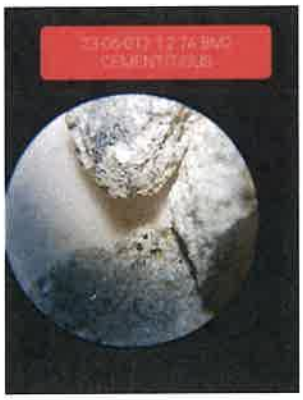
Sample Collected: 6/2/23
Sample received by the lab: 6/2/23 in wet condition – 450.82 gr
Sample dried on 6/5/23 in an oven at 110^{0}C until the weight is stable – 413.36 gr
Moisture content determined at 8.31%

PLM Analysis
The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 6/6/23**

FRACTIONS	WEIGHTS AFTER SIEVING (gr)	PLM Analysis
>19mm	20.53	NAD (No Asbestos Detected)
C (Coarse Fraction) < 19 to > 2mm	W_C = 174.94	**3.0% CH**
M (Medium Fraction) < 2mm to > 106 µm	W_M =210.06	**0.50% CH**
F (Fine Fraction) < 106 µm	W_F = 7.83	NAD (No Asbestos Detected)

TOTAL ASBESTOS % = $\frac{[\%_F \text{ PLM PC}^* W_F] + [\%_M \text{ PLM} * W_M] + [\%_C \text{ PLM} * W_C]}{(W_F + W_M + W_C)}$ = **1.6%**

Analyzing the coarse fraction using stereomicroscopy two building materials found in soil which analyzed and reported separately in accordance with NYS-DOH ELAP Methods198.1, 198.4 and 198.6 and reported in attachment A. One material tested as ACM.



TEM Drop Mount Screening

TEM Drop Mount screening performed of fine fraction. Approximately 20-100mg of material is suspended in ethanol. The suspension is ultrasonicated and then a 3 µl aliquot is extracted and drop mount onto a carbon coated grid. The sample grid is examined by Transmission electron microscope (TEM) using the JEOL 100CX, with an Evex X ray spectral analyzer at approx. 20,000 X screen magnification. At least five openings over two grids are examined.

Chrysotile asbestos structures were found. (Date of analysis 6/7/23)

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.223
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.2936
Total Asbestos Structures = 36 chrysotile structures
Asbestos concentration = 10.5696 structures / µg
(Date of Analysis: 6/8/23)

Soil Sample: MW07B – Location: Monitoring Well-07; 4 foot depth

Sample Collected: 6/2/23
Sample received by the lab: 6/2/23 in wet condition – 380.48 gr
Sample dried on 6/5/23 in an oven at 110^{0}C until the weight is stable – 346.43 gr
Moisture content determined at 8.95%

PLM Analysis

The sample is passed through a series of sieves (19mm, 2mm and 106 µm) into a collection pan using a mechanical sieving system (Gilson tapping shaker SS-8R). The weights of each fraction have been determined. All fractions are analyzed using stereomicroscopy and polarized light microscopy (PLM), along with visual area estimation. **Date of PLM Analysis 6/12/23**

TEM gravimetric reduction and filter preparation

Approximately 200 mg of the material from the fine fraction is weighted and gravimetrically reduced, using a muffle furnace at 480^{0}C and after cooling the material is filtrated using a 47-mm filtration assembly using a 47-mm MCE filter porous size 0.22 µm. Analysis follows using test method D6281 initially at low magnification (about 500-1,000 X) to determine the preparation showing optimal particulate loading. Ten grid openings are examined at 20,000 X screen magnification. We record the structures that contain asbestos fibers meeting 5:1 length / width aspect ratio greater than 0.5 m in length. Structures are identified using morphology, selected area electron diffraction (SAED) and energy dispersive X-ray analysis (EDXA)

Starting weight (gr): 0.217
Effective filter area of 47-mm filter = 1320 mm^2
Grid Openings analyzed: 24
Average grid opening area (mm^2): 0.0084
Area Analyzed (mm^2): 0.2016
Analytical Sensitivity (structures / µg) =0.3017
Total Asbestos Structures=0

No asbestos structures were found (Date of Analysis: 6/16/23)

Date of Report: 6/20/23

D. Molohides, Lab Director

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 0.25%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. **Analytical equipment**: Stereo Binocular Microscopes: Motic SMZ140-N2LED (SN#: 03210037461 / 03210037462 / 03210023903 / 03210023905); Polarized Light Microscopes: Motic Panthera TEC-POL (SN#: 19017119 / 19021954 / 21006248), Olympus BH-2 (Ser #: 207130). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(June 28, 2022)**

APPENDIX D
Laboratory Accreditations

NEW YORK STATE DEPARTMENT OF HEALTH
WADSWORTH CENTER

Expires 12:01 AM April 01, 2024
Issued April 01, 2022
Revised March 30, 2023

CERTIFICATE OF APPROVAL FOR LABORATORY SERVICE

Issued in accordance with and pursuant to section 502 Public Health Law of New York State

MR. DIMITRIOS MOLOHIDES
ALPHA LABS LLC
14-26 28TH AVENUE
LONG ISLAND CITY, NY 11102

NY Lab Id No: 11833

is hereby APPROVED as an Environmental Laboratory for the category
ENVIRONMENTAL ANALYSES SOLID AND HAZARDOUS WASTE
All approved subcategories and/or analytes are listed below:

Miscellaneous

Asbestos in Friable Material	Item 198.1 of Manual
	EPA 600/M4/82/020
Asbestos in Non-Friable Material-PLM	Item 198.6 of Manual (NOB by PLM)
Asbestos in Non-Friable Material-TEM	Item 198.4 of Manual
Asbestos-Vermiculite-Containing Mate	Item 198.8 of Manual
Lead in Dust Wipes	EPA 7000B
Lead in Paint	EPA 7000B
	ASTM D3335-85A

Sample Preparation Methods

	EPA 3051A
	ASTM D3335-85A
	ASTM E-1644-17

Serial No.: 66567

Property of the New York State Department of Health. Certificates are valid only at the address shown and must be conspicuously posted by the laboratory. Continued accreditation depends on the laboratory's successful ongoing participation in the Program. Consumers may verify a laboratory's accreditation status online at https://apps.health.ny.gov/pubdoh/applinks/wc/elappublicweb/, by phone (518) 485-5570 or by email to elap@health.ny.gov.

United States Department of Commerce
National Institute of Standards and Technology

Certificate of Accreditation to ISO/IEC 17025:2017

NVLAP LAB CODE: 200691-0

Alpha Labs LLC
Long Island City, NY

is accredited by the National Voluntary Laboratory Accreditation Program for specific services, listed on the Scope of Accreditation, for:

Asbestos Fiber Analysis

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to joint ISO-ILAC-IAF Communique dated January 2009).

2023-01-01 through 2023-12-31
